Canada, a land of many lakes and rivers, has been endowed by nature with great water power resources well distributed across the country. Adequate precipitation and favourable topography result in numerous fast flowing rivers which offer excellent opportunities for the development of hydraulic power; with the exception of the prairies of the mid-west, water power resources of importance are found in virtually every part of the country. In British Columbia, where precipitation is high, the rivers flowing down the Pacific slope of the Rocky Mountains present fine power sites. Extensive water power resources are available in the Yukon Territory, principally on the Yukon River and its tributaries. Alberta, although a prairie province, also has mountain streams from the Rockies and great reserves of undeveloped power on its large northern rivers. The Canadian Shield of Precambrian rock, which forms an arc around Hudson Bay, covers a portion of the Northwest Territories and northern Saskatchewan as well as large parts of Manitoba, Ontario, Quebec and Labrador; it is a rough, forest-covered, well watered area characterized by innumerable lakes and by rivers with many falls and rapids. The Great Lakes-St. Lawrence River system and its tributaries provide the extensive power resources of Ontario and Quebec upon which their status as the principal manufacturing provinces of Canada is dependent and which compensate in large degree for the lack of indigenous coal. In New Brunswick and Nova Scotia and on the Island of Newfoundland, precipitation is moderately heavy and the rivers, though not large, afford numerous possibilities for power developments of moderate size. In Labrador the potential resources of the Hamilton River are outstanding.

An accurate comparison of Canada's water power resources and their development with those of other countries is not possible because world statistics are incomplete and are tabulated on differing bases. However, from information available it appears that Canada ranks second among the countries of the world in total installed capacity, being exceeded only by the United States; in installation per thousand population, Canada is exceeded only by Norway. Canada is in approximately fifth place in potential power resources but, on the whole, those resources are more readily available to prospective markets than are the water power resources of other countries that outrank Canada, an exception being the United States. In particular might be mentioned the enormous potential resources of the great river systems of Africa and Asia.

* Revised by the Water Resources Branch, Department of Northern Affairs and National Resources, Ottawa.

Table 1 gives a summary of the water power resources of Canada and their development as at the end of 1958.

1.—Available and Developed Water Power, by Province, as at Dec. 31, 1958

Province or Territory	Available 24-Hour Power at 80 p.c. Efficiency		Turbine Installation ¹

stream flow regulation based on known storage potentials.

² This figure reflects the effect of possible

The figures given in the first and second columns of Table 1 represent 24-hour power and are based upon rapids, falls and power sites of which the actual drop, or the head of possible concentration, has been measured or at least carefully estimated. Tabulations of potential power in Canada are not complete as many unrecorded rapids and falls of undetermined power capacity exist on rivers and streams throughout the country, particularly in the less explored northern districts. Apart from areas where definite studies have been carried out and the results recorded, no consideration has been given to the power concentrations that are feasible on rivers and streams of gradual gradient where economic heads possibly may be created by the construction of dams. Furthermore, the estimates of power available in different provinces do not include the power potential of major river diversions which have been investigated but not developed. Thus the figures in Table 1 of available power under the two conditions of stream flow represent only the minimum water power possibilities of Canada.

The figures in the third column of Table 1 give the total capacity of the water wheels actually installed and should not be placed in direct comparison with those in the first and second columns to deduce the percentage developed of the available water power resources. While the maximum economic turbine installation at any site can be determined only by careful consideration of all conditions and circumstances pertinent to its individual development, it is usual practice to install turbines that have a total capacity in excess of the power equivalent of the six-months flow at the site.

The consistent growth of hydraulic turbine capacity is shown in Table 2. The average annual increase from 1900 to 1905 of 56,000 h.p., was stepped up sharply in subsequent years because of improvements in the transmission of electricity and the building of large generating stations. During the period 1906-22 development proceeded at the fairly uniform rate of 150,000 h.p. per annum but the rate of installation increased sharply in 1923 and continued at about 377,000 h.p. each year from 1923 to 1935. As an aftermath to the economic depression, the rate of installation was low during the years 1936-39 but increased to a high average of 481,000 h.p. per annum during the period 1940-43 to satisfy war requirements. Few developments were undertaken in the later war years or in the immediate postwar period so that only a small amount of new capacity came into

operation in the 1944-47 period. However, the effects of the later postwar program of construction are apparent in the large growth during the years 1948-58 when the average rate was about 1,000,000 h.p. per annum. A continuation of this rate of growth is indicated for some years.

2.—Hydraulic Turbine Horsepower Installed, by Province, as at Dec. 31, Decennially 1900-50 and Annually 1951-58

NOTE.—Figures for the years 1900-30 are given in the 1939 Year Book, p. 362; for 1931-39 in the 1946 edition, p. 362; and for 1940-49 in the 1954 edition, pp. 556-557.

The availability of large amounts of hydro-electric energy has greatly fostered the economical utilization of the natural products from land, forest and mine. Low-cost power is fundamental in meeting the enormous requirements of Canada's great pulp and paper and smelting and refining industries. Indeed, Canada's outstanding industrial growth in the postwar period has been made in conjunction with accelerated development of water power resources. From hydro-electric plants ranging in capacity from a few hundred to more than 1,000,000 h.p., networks of transmission line carry power to most urban centres and to an increasing number of rural districts. This wide distribution of power has facilitated the decentralization of industry, enabling manufacturing processes to be carried on in many of the smaller centres of population. Low-cost domestic electrical service also contributes in no small measure to the high standard of living in Canada.

In 1957, hydro-electric installations produced a total of about 83,000,000,000 kwh. of electric energy. Assuming a working year of 275 eight-hour days and that the working capacity of a manual worker equals 1/10 h.p., the total energy produced from water power in 1957 represents the equivalent of the output of about 503,000,000 labourers.

Table 3 indicates the respective amounts of water power that have been developed by utilities and by industrial establishments. For this tabulation, utilities are defined as companies, municipalities or individuals who sell most of the power they develop. In some instances they include also certain subsidiary companies whose main purpose is to develop and sell power to a parent company for industrial purposes. Installations of utilities totalling 17,364,220 h.p. represent 78 p.c. of Canada's total developed water power as at Dec. 31, 1958.

Industrial establishments are defined as companies or individuals developing power mainly for their own use. Installations of industrial establishments totalled 5,015,406 h.p. as at Dec. 31, 1958. In addition, industry purchased a considerable amount of electricity from utilities.

The figure of total hydraulic installation in Canada (22,379,626 h.p.) is the cumulative total of all existing installations of water wheels and hydraulic turbines irrespective of whether or not the equipment has been in use during the year. It has been adjusted to Dec. 31, 1958, by the inclusion of new installations completed during the year and by deletions of old units that were dismantled.

developed by industries mainly for their own use.

² Includes only water power
³ Includes all water wheels and hydraulic turbines installed.

Section 2.—Thermal Power*

Thermally produced electric power capacity has expanded at a phenomenal rate since World War II. It has been estimated that the ratio of generating capacity in central thermal and hydro stations has sharply narrowed from 1:15 to 1:7 in the ten-year interval prior and subsequent to 1945. In 1958, this ratio approached 1:5 with the probability that by 1980 it would be as little as 1:2.

The accelerating trend toward thermal power developed significantly within the years 1954-58, particularly in the Atlantic and Prairie Provinces, Ontario and British Columbia. While Quebec and the Northwest Territories depend less on thermally generated power than the remainder of Canada, these regions too will eventually have need for such power.

* Prepared by the Fuels Division, Department of Mines and Technical Surveys, Ottawa.

This trend has been brought about for a number of reasons, mainly of economic expediency. Canada's rapidly expanding economy demands ever-increasing supplies of electric energy to serve a growing population and industrial complex. Supplies of hydraulic energy within economic transmission distance of populated areas are becoming fewer and much more costly to develop. Expenditure of large amounts of capital required to develop single blocks of hydro power at distant points cannot be justified unless there is immediate use for all of the power generated at a load factor which warrants its transmission over long distances. Moreover, the load on the established electrical systems in many areas now needs firming with extra supplies of reliable thermal energy not heretofore required, and this can be provided at lower capital cost per unit of installed capacity than by hydro facilities which may be affected by periodic water shortages.

The trend is well exemplified by reference to the vast complex of The Hydro-Electric Power Commission of Ontario, one of the world's largest single power operations. At the end of 1958 this system had generating resources of 4,956,270 kw. of which only 571,965 kw. were installed in thermal stations. Additional steam capacity under construction amounted to 1,500,000 kw. with forecast of about 3,000,000 kw. to meet requirements by 1970. The Commission's long-term forecast estimates that—if nuclear electricity is not available at competitive cost by 1980—26,500,000 tons of coal annually, at a cost of some \$300,000,000, will be required to fuel its steam capacity which by 1980 may amount to as much as 10,000,000 kw. or twice the available generating facilities available from hydraulic sources.

The most recent survey* shows that from 1950 to 1957 the net generating capability of thermal stations had increased by 195 p.c., as compared with 65 p.c. for hydro stations, with a forecast that by the end of 1961 thermal station net generating capability will have advanced over 1950 by 529 p.c. as against 116 p.c. for hydro stations.

Table 4 gives, by province, the estimated amount of increase in net generating capability and the percentage annual increment in thermal and hydro facilities for the period 1950-61. These data clearly indicate the growing importance of thermal generating capacity in comparison with hydro, and that, proportionately, the rate of growth is higher than for hydro in all of the provinces.

* DBS Report, *Fourth Annual Electric Power Survey of Capability and Load—March 1958.*

4.—Estimated Increase in Net Generating Capability, by Province, for the Period 1950-61

Heretofore, a fair proportion of the thermal generating capacity was operated at extremely low rates of load factor, particularly in small stations serving isolated communities, and as standby to hydro facilities. However, progressive increase in load and need for firmer output is making it economical to install larger and more efficient thermal units essentially in the larger stations serving widespread system demands. Here the capacity is mainly provided by steam-motivated turbo-alternators, the largest of which are capable of generating a kilowatt-hour from a pound of coal. Still larger units, shortly to be installed, will be capable of generating a kilowatt-hour with as little as two-thirds of a pound of coal. Since 1955, in Western Canada ten gas-turbine-driven generating sets with capacities of from 7,500 to 30,000 kw. have been installed, with several more in the course of installation. These sets have the advantage of low first cost and extreme flexibility, and are well suited for peaking operations in an integrated system. In addition, a number of gas-diesel-driven generator sets with capacities to 3,000 kw. have replaced smaller oil diesel units in several western stations, more particularly in British Columbia.

In 1957, thermal facilities provided 8 p.c. of the electricity generated in Canada and hydro facilities 92 p.c. Of the thermal generation, as much as 94 p.c. was provided by steam-driven equipment and 6 p.c. by diesel-engine and gas-turbine equipment.

Section 3.—Water and Thermal Power Developments in the Provinces and Territories, 1957 and 1958

A total of 1,546,560 h.p. of new hydro-electric capacity was placed in service in 1957 and 2,500,000 h.p. was added in 1958. The latter total is the highest increase ever recorded in one year. Construction of hydro-electric plants continued to accelerate with about 4,300,000 h.p. of new capacity expected to come into operation during the next few years. Construction was active also in the field of power distribution and in the building of thermal-electric plants. Progress in hydro-electric and thermal-electric construction is outlined below by provinces.

Atlantic Provinces.—In Newfoundland during 1957 the Maritime Mining Corporation completed the installation of a 460-h.p. hydro-electric plant on Venams Brook at Green Bay and a 760-h.p. plant at Snooks Arm, Green Bay. The following year the Bowater Power Company completed a development of 12,000 h.p. in two units on the Corner Brook River at Corner Brook and had in active prospect the development of two sites in the Grand Lake Watershed—one on Hinds Brook to comprise 50,000 h.p. in two units and the other on Little Grand Lake to consist of one 14,000-h.p. unit. The Newfoundland Light and Power Company Limited late in 1958 completed a new hydro-electric plant, a 17,000-h.p. development in two units on Rattling Brook near Norris Arm. The Union Electric Light and Power Company Limited doubled the capacity of its Trinity River plant by the addition of a 2,000-h.p. unit in 1958 and constructed 33 miles of 48-kv. transmission line in the Trinity Bay area. The United Towns Electric Company in 1958 added a 3,600-h.p. unit to its plant at Lookout Brook, increasing the total installed capacity at this site to 7,300 h.p. in three units. The Company also started construction on a 1,200-h.p. plant in one unit at Pitmans Pond. The Iron Ore Company of Canada expects to add a new 19,000-h.p. unit in 1960 at its Menihek Rapids Development on the Ashuanipi River in Labrador.

In the thermal-electric construction field, the Newfoundland Light and Power Company added a 20,000-kw. unit to its steam plant at St. John's, to augment the existing 10,000-kw. unit.

In Prince Edward Island, the Maritime Electric Company Limited in 1958 began the installation of a 10,000-kw. unit for operation late in 1961 at its steam plant at Charlottetown.

In Nova Scotia in 1957 the Nova Scotia Power Commission completed a 5,300-h.p. unit on the Bear River at Bear River and in 1958 demolished two small plants on the Sissiboo River and began the construction of a 12,000-h.p. unit at the original Weymouth Falls site and a 8,000-h.p. unit near the Sissiboo Falls site. During 1957-58, extensions to the Commission's transmission system included 79 miles of 69-kv. line and 40 miles of 23-kv. line. Three substations of 15,000, 3,750 and 3,000 kva. respectively were placed in service during 1957 by the Commission and two others, each of 5,000 kva., in 1958. The Nova Scotia Light and Power Company late in 1958 completed the replacement of two 1,150-h.p. units by a single 5,000-h.p. unit at its Hemlock Falls installation on the Avon River at Windsor Forks. In active prospect is a 6,500-h.p. development on the Nictaux River at Alpena.

The Nova Scotia Light and Power Company increased its thermal power capacity at Halifax by the addition of a 50,000-kw. unit in 1957 and a 45,000-kw. unit was under construction. The Nova Scotia Power Commission had under construction a 20,000-kw. unit at its Trenton steam plant, now rated at 40,000 kw., and the Seaboard Power Corporation an additional 16,000-kw. unit in its Sydney steam plant. All three units were scheduled for operation in 1959.

In New Brunswick, the New Brunswick Electric Power Commission brought into operation the first of two 45,000-h.p. units at its Beechwood development on the St. John River in 1957 and the second in 1958. Provision has been made for the later installation of a third similar unit. During 1957-58, the Commission extended its transmission facilities by about 289 miles of 138-kv. line. In 1957 the Commission added two substations, each rated at 50,000 kva., and began the construction of another substation of 10,000 kva. The Commission also had under construction in 1958 at Saint John a new 50,000-kw. steam plant scheduled for completion in 1961; elsewhere a 6,540-kw. unit was placed in operation at the Bathurst steam plant of the Bathurst Power and Paper Company Limited and a new unit of 12,500 kw. was added to the Edmundston steam plant of the Fraser Companies Limited.

Quebec.—The Province of Quebec continued expansion of its hydro-electric power facilities, placing in operation new capacity totalling 473,900 h.p. in 1957 (after allowing for the dismantling of 10,100 h.p.) and 900,000 h.p. in 1958. Of the latter, 450,000 h.p. was installed at the Quebec Hydro-Electric Commission's Bersimis I plant located about 300 miles northeast of Montreal, where the final three units of 150,000 h.p. each were placed in service, raising the total installed capacity of the plant to 1,200,000 h.p. At Bersimis II, 23 miles downstream, good progress was achieved on the construction of five units of 171,000 h.p. each under a head of 375 feet; three units are scheduled for operation late in 1959 and the remaining two units late in 1960. At the Beauharnois development on the St. Lawrence River, about 30 miles from Montreal, the Commission continued construction of the third and final section of the powerhouse which will contain 11 units each of 73,700 h.p. under a head of 80 feet. Initial operation of this section is expected early in 1959 and upon its completion in 1961 the total installed capacity of the over-all development will be 2,234,700 h.p. Work was completed early in 1958 on the construction of a storage dam at the outlet of Lake Ste. Anne on the Toulmoustou River, a tributary of the Manicouagan River, to allow a higher firm output from the plant of the Manicouagan Power Company where additional capacity was installed. Studies and surveys are being carried out by the Commission for developments in the Lachine Rapids section of the St. Lawrence River and in the Manicouagan region on the north shore of the St. Lawrence River.

In 1957, Price Brothers Company Limited completed the construction of its new 82,000-h.p. Murdock-Willson plant located at the mouth of the Shipshaw River, and the construction of a 3-mile 69-kv. transmission line between the new powerhouse and the Kenogami Paper Mill. In the same year Smelter Power Corporation, a subsidiary of Eastern Mining and Smelting Company, completed the development of its single-unit 42,000-h.p. plant at Chicoutimi on the Chicoutimi River.

The Manicouagan Power Company in 1958 completed its McCormick Dam Project No. 2, a 180,000-h.p. extension of the original Manicouagan River plant at First Falls near Baie Comeau; the final two units of 60,000 h.p. each were placed in operation in March and April. A 161-kv. line was constructed in 1957 connecting the McCormick Dam substation to the Canadian British Aluminum Company's smelter plant at Baie Comeau and in 1958 the Company commenced construction of a 3½-mile 161-kv. line from its 161-kv. substation at Manicouagan to the Quebec Hydro-Electric Commission's substation at Hauterive. The Aluminum Company of Canada continued the development of five units of 200,000 h.p. each on the Peribonca River at Chute des Passes for initial operation late in 1959 and completion in 1960. To augment the flow at Chute des Passes, the Company was proceeding with a project which would enable it, in 1958, to divert water from Manouan Lake into the Bonard River, a tributary of the Peribonca River upstream from Passe Dangereuse. The Shawinigan Water and Power Company made good progress during 1957 on the construction of its 330,000-h.p. Rapide Beaumont development on the St. Maurice River and in 1958 placed in operation all six units. The Company extended its transmission system by 16 miles of 66-kv. line between St. Adrian and Weedon.

The James MacLaren Company is building, for completion in 1959, a hydro-electric station of 50,000 h.p. on the Lièvre River at Dufferin Falls in Buckingham. During 1957 and 1958, the Gatineau Power Company proceeded with the conversion of its 25-cycle equipment to 60 cycles, completed the construction of a new 69-kv. line from St. Jovite to Arundel and a 240-kv. line from Lachute to St. Jérôme. In 1957 the Lower St. Lawrence Power Company installed new 5,000-kva. distribution substations at Mont Joli, Rimouski and Matane and completed construction of a 45-mile 161-kv. transmission line between Les Boules and Causapscal.

Quebec Cartier Mining Company (a subsidiary of United States Steel Corporation) commenced the construction of a hydro-electric plant of three units of 22,000 h.p. each on the Hart-Jaune River, five miles downstream from the outlet of Little Manicouagan Lake. These three units, to be in operation late in 1960, will supply power to the Company's immense iron ore project located in the Lac Jeannine area of Quebec. This development involves the construction of a storage dam at the outlet of Little Manicouagan Lake and it is expected that the additional regulation on the Manicouagan River system will permit the Manicouagan Power Company to install three additional units in its existing 172,000 h.p. McCormick development located near Baie Comeau.

A number of extensions to transmission and distribution systems were completed by other power-producing agencies during the two years. The Shawinigan Water and Power Company had under preparation for the City of Sherbrooke, plans for the construction of a substation consisting of two transformers of 30,000 kva. and 40,000 kva. respectively, required before that city can receive power from the Shawinigan system.

Ontario.—Ontario's new capacity brought into operation during 1957 and 1958 reached a total of 1,758,700 h.p. Nearly all this capacity was installed by The Hydro-Electric Power Commission of Ontario which is Canada's largest power-producing and distributing agency. Work continued on several major projects. The greatest construction progress was that of the St. Lawrence River Power Project, the Canadian portion of which is being constructed by the Commission. The first two units of the 1,200,000-h.p. plant were placed in service in July 1958 and nine more in the second half of the year. The remaining

seven units are scheduled for completion by November 1959. One of the major highlights of the project occurred on July 1, 1958, when an earth-filled cofferdam upstream of the powerhouse was demolished and the powerhouse headpond area was flooded.

Construction of the control dam, which forms part of the Niagara River remedial works carried out jointly by Canada and the United States, was completed in 1957 when the last of the 13 individually operated bascule-type gates was placed in operation.

In the Sir Adam Beck-Niagara Generating Station No. 2, two 105,000-h.p. units were installed in December 1957; two similar units were completed in mid-1958 and the ultimate plant capacity of 1,680,000 h.p. in 16 units was attained. At the pumping-generating station associated with the No. 2 development, three units were placed in operation in the latter part of 1957 and the remaining three in the spring of 1958. During periods of low power demand, the units will pump water diverted from the main power canal into a reservoir having a capacity of 16,000 acre-feet. In periods of high power demand, they will operate as turbines, each with a capacity of 47,000 h.p. at maximum head. Flow from the reservoir will in turn augment the flow in the power canal and thus increase the output in the main generating station.

Further progress was made by the Commission during 1957 and 1958 on the construction of new hydro-electric plants in northwestern Ontario to meet a growing demand for power by pulp and paper and mining companies in that area. Construction was completed in the later year of the three-unit, 81,000-h.p. plant at Whitedog Falls on the Winnipeg River, and of the three-unit, 102,000-h.p. plant at Caribou Falls on the English River. Construction began in the spring of 1957 for an additional unit of 18,500 h.p. in the Manitou Falls Generating Station on the English River and the unit was placed in service in March 1958, increasing the installed capacity of the plant to 92,500 h.p. in five units. At the Cameron Falls and Alexander Falls plants on the Nipigon River, two units of 25,000 h.p. and 19,000 h.p. respectively were added. At Silver Falls on the Kaministiquia River, construction began on a single-unit 60,000-h.p. plant for completion late in 1959.

In northwestern Ontario, the Commission plans to install an additional 60,000-h.p. unit in its Abitibi Canyon Generating Station for service in 1959. The new unit will generate 60-cycle power, as opposed to the 25-cycle power which is developed in the existing 264,000-h.p. installation, and will result in more dependable service loads to those communities in the area that require 60-cycle power. The Commission also plans the construction of a 53,000-h.p. plant in two units on the Mississagi River at Red Rock Falls for service in 1961 and the installation of a new plant at Otter Rapids on the Abitibi River for service in 1962.

A vital factor in the Commission's plans for the future is the development of power resources other than hydraulic as supplemental sources of power. During 1958 the Commission undertook the construction of two new thermal-electric generating stations, Lakeview Generating Station immediately west of the Metropolitan Toronto area and Thunder Bay Generating Station at Fort William. A third station is planned for the Hamilton area. Excellent progress was made also on the enlargement of the Richard L. Hearn Generating Station to 1,200,000 kw. or three times its present size. Studies were continued in conjunction with Atomic Energy of Canada Limited and other agencies with regard to the development of a large-scale reactor for the production of energy from nuclear resources. Plans for a 200,000-kw. nuclear-electric generating station are being developed. In the meantime construction of the 20,000-kw. nuclear-electric generating station near the Des Joachims Generating Station on the Ontario side of the Ottawa River was resumed. Work there had been temporarily suspended in 1957 to permit changes in the design of the reactor to be incorporated.

Apart from the activities of the Commission, the Great Lakes Power Company placed in service in 1957 a new 30,000-h.p. unit to its Upper Falls plant on the Montreal River increasing the plant capacity to 55,300 h.p. In 1958, a 30,300-h.p. single-unit generating station was completed at Gartshore Falls on the Montreal River and a similar unit on the Michipicoten River at Cat Falls is expected to be in operation by mid-1959.

Prairie Provinces.—In Manitoba, the Manitoba Hydro-Electric Board continued the construction of the first-stage development of the Grand Rapid project on the Nelson River which will consist of five units of 42,000 h.p. each under a 50-foot head. Operation of two units is expected by mid-1960, and the remaining three in 1961. The power will be supplied to the mining development of the International Nickel Company at Moak, Mystery and Thompson Lakes. The Sherritt-Gordon Mines Limited completed in 1957 the development of a second 7,000-h.p. hydro-electric plant in one unit on the Laurie River.

In addition to hydro-electric activities, the Manitoba Hydro-Electric Board completed in 1958 the construction of its Brandon steam plant, increasing capacity to 132,000 kw. in four units. Work continued on the Selkirk steam plant which will contain two units each rated at 66,000 kw., one of which is scheduled for operation late in 1959 and the second by mid-1960. The diesel generating plant at The Pas was purchased on Dec. 1, 1958, by the Manitoba Power Commission and an immediate extension was begun to increase plant capacity to 3,150 kw. from the existing 1,825 kw. The new plant is expected to be in operation by the end of 1958. The Department of National Defence added a 1,136-kw. generator unit to its diesel plant at Churchill.

In Saskatchewan, the Churchill River Power Company continued construction at its Island Falls development for the addition of a 19,000-h.p. unit in 1959 which will raise the total plant capacity to 125,500 h.p. The Saskatchewan Power Corporation, whose transmission network covers a large part of the southern portion of the province, depends exclusively on thermal-electric stations for power production. Agreement between the Government of Canada and the Government of Saskatchewan was reached in July 1958 authorizing the construction of the multi-purpose South Saskatchewan River project. Included in this project is a proposed installation of about 200,000 h.p. of hydro-electric capacity and facilities to irrigate about 500,000 acres of land. During the year, rural electric service was extended to an additional 5,000 farms making a total of about 51,500 electrified farms in the province. During 1957, the Corporation increased its thermal plant capacity by the addition of a 30,000-kw. unit at its Estevan plant, an 8,000-kw. unit at its Kindersley plant and a 3,000-kw. unit at its Swift Current plant. During 1958, the capacity of the Queen Elizabeth plant at Saskatoon was increased by 66,000 kw. and the Kindersley plant by the installation of two gas turbine units, each with a maximum rating of 10,000 kw.

In Alberta, Calgary Power Limited added to its Cascades development, late in 1957 a second 23,000-h.p. unit under a head of 320 feet. The construction of extensions to its Spray and Rundle plants of approximately 62,000 h.p. and 40,000 h.p., respectively, was suspended as a result of an unexpected decline in the rate of growth of the Company's load curve. The revised schedule calls for the additional units to commence service in October 1960. In thermal power development, the Company added another 66,000 kw. to its Wabamun plant. In 1957 a 1,250-kw. unit was added by Northland Utilities at its thermal-electric plant at Jasper. At the Fairview plant, operated jointly with Canadian Utilities Limited, a new 3,000-kw. gas engine generator unit was brought into operation.

Early in 1958, Canadian Utilities Limited placed in operation a new single-unit 10,000-kw. thermal plant at Sturgeon Lake and had in active prospect the addition of a 32,000-kw. thermal unit at its Battle River plant to commence operation in 1961. The City of Edmonton brought into service a new 10,000-kw. unit at its municipally owned plant and the City of Lethbridge added to its municipally owned plant a gas turbine generating unit with a capacity of 10,000 kw.

British Columbia.—Hydro-electric construction was active in British Columbia where a total of 607,500 h.p. of new capacity was installed during 1957 and 189,700 h.p. during 1958. The latter figure allowed for the dismantling of 2,300 h.p. of capacity.

On Vancouver Island, the British Columbia Power Commission completed in 1957 the installation, at its Ladore Falls development on the Campbell River, of the second of two 35,000-h.p. units. In mid-1958, the Commission placed in operation an initial unit of 42,000 h.p. under a head of 140 feet at its Strathcona development near the outlet of Upper Campbell Lake, and construction proceeded on a 35,000-h.p. development on the Ash River near Port Alberni for operation early in 1959. On the mainland, the Commission added a third 16,500-h.p. unit at its Whalshan development near Needles. In active prospect are three new developments on Vancouver Island—two located in the Alberni area on the Stamp and Sproat Rivers with potential of 35,000 h.p. and 17,000 h.p., respectively, and the third on the Kokish River in the Englewood area with a potential of 51,500 h.p. In addition, the Commission has four possible developments under active study and investigation. One is on Vancouver Island on the Nempkish River and has a potential of 81,500 h.p. The other three are located on the mainland and consist of a development of up to 1,900,000 h.p. which would result from the diversion of water from the Chilko to the Homathko Rivers, a 140,000-h.p. potential at Helmoken Falls on the Murtle River tributary to the Clearwater River, and a potential of 120,000-h.p. at Hobson Lake, also in the Clearwater system.

In the field of thermal development, the Commission completed two single-cycle gas-turbine units of 26,500 h.p. each at its Georgia Generating Station at Chemainus, placed in service in September 1957 and January 1958 respectively. Two regenerated cycle gas-turbine units, each having a 24,000-h.p. turbine, were expected to be in operation by December 1958 and February 1959 respectively. At Prince George, seven diesel units with a total capacity of 6,480 kw. were transferred from active to inactive plant. The active plant now consists of four tri-fuel internal combustion units, each with a capacity of 3,000 kw. Two more 3,000-kw. units are in active prospect and it is anticipated that one will be in service by December 1959 and the other by February 1960. At Quesnel, six diesel units with a total capacity of 4,200 kw. were transferred from active to inactive plant. The active plant now consists of three tri-fuel internal combustion units, each with a capacity of 3,000 kw. Another 3,000-kw. unit is in active prospect, with completion anticipated for May 1960. At Dawson Creek, three diesel units with a total capacity of 1,800 kw. were transferred from active to inactive plant. The active plant now consists of three 3,000-kw. tri-fuel internal combustion units and two 1,000-kw. diesel units. Two more 3,000-kw. units are in active prospect, with the completion of one anticipated for October 1959 and the other for April 1960. Also in active prospect is a 1,000-kw. diesel unit at Smithers and a 100-kw. diesel unit at Alert Bay. The probable completion dates are June 1959 for the unit at Smithers and December 1959 for the unit at Alert Bay.

The British Columbia Electric Company's Cheakamus development, consisting of two units of 95,000 h.p., was brought into operation late in 1957. The Company also replaced its 4,000-h.p. two-unit installation at Clowham Falls on Sechelt Peninsula by a single-unit plant of 40,000 h.p. At the Company's Bridge River system, the power plant at La Joie dam, consisting of 30,000 h.p. in one unit, was placed in service. Work was continuing on the Bridge River No. 2 development which, when completed late in 1959, will provide an additional capacity of 328,000 h.p. to the system. The new storage dam required for the No. 2 development will raise the head on the existing Bridge River No. 1 development and is expected to increase the total capacity of that plant from 248,000 h.p. to 276,000 h.p.

In addition to its hydro-electric installations, the Company expects to complete construction of its Port Mann gas-turbine plant early in 1959. Four units will be installed, each consisting of a 33,500-h.p. turbine. At Ioco on Burrard Inlet, construction started on the development of a steam plant which will have an ultimate capacity of six units of 211,000 h.p. each. Two units are planned for service in 1961 and remaining units subsequently, as required by growth.

The Aluminum Company of Canada Limited installed in 1957 the fifth and sixth units of 150,000 h.p. each in its Kemano plant. Early in 1958, a seventh similar unit was added, bringing the total capacity to 1,050,000 h.p.

Northwest Territories and Yukon Territory.—The Northern Canada Power Commission late in 1957 added a second 3,000-h.p. unit at its Mayo River plant. In 1958 the installation of 15,000 h.p. in two units was completed on the Yukon River with provision for a third similar unit at a later date. On the Snare River in the Northwest Territories, the Commission is planning the construction of a 9,200-h.p. development in one unit at a site about eight miles downstream from the existing Snare River plant.

The Commission installed a 150-kw. diesel generating plant at Inuvik and began construction to add a 100-kw. unit to its Fort Simpson diesel plant. Additional capacity provided by the Commission consists of two 375-kw. diesel generating units for use as required. In Yukon Territory, the Yukon Electrical Company Limited installed a 150-kw. diesel plant at Haines Junction.

Section 4.—Electric Power Statistics

The statistics in this Section, which was formerly entitled "The Central Electric Station Industry" have been completely revised since the publication of the 1957-58 Year Book. The former series covered firms that sold electric power, most of which were public utilities, but included also a small number of industrial plants that had some electric power available for sale. The new series includes all electrical utilities as well as all industrial establishments that generate power regardless of whether or not any is sold and therefore gives the *total* production and distribution of electric power in Canada. Utilities are defined as companies, commissions, municipalities or individuals whose primary function is to sell most of the electricity they have either generated or purchased; they are classified as publicly or privately operated. Industrial establishments are companies or individuals that generate electricity mainly for use in their own plants.

Table 7 gives historical figures compiled on the old basis, with the 1956 data included on both bases for comparative purposes. All other 1956 data are on the new basis.

7.—Electric Energy Generated, by Type of Station 1941-57 and by Province 1956 and 1957

Year and Province or Territory	Generated by—		Total	Year and Province or Territory	Generated by—		Total
	Water Power	Thermal Power			Water Power	Thermal Power

¹ New series, see text above.

Of the total generation in 1957 of 91,030,880,000 kwh. 91.6 p.c. was produced from water power and 8.4 p.c. was generated thermally; in 1956 total generation was 88,366,063,000 kwh. of which 92.6 p.c. was produced from water power and 7.4 p.c. thermally. The proportions generated in 1957 differed somewhat among provinces as shown in the following statement.

<u>Province</u>	<u>Hydro</u>	<u>Thermal</u>	<u>Province or Territory</u>	<u>Hydro</u>	<u>Thermal</u>
	p.c.	p.c.		p.c.	p.c.
Newfoundland.....	96.3	3.7	Manitoba.....	99.2	0.8
Nova Scotia.....	34.3	65.7	Saskatchewan.....	32.0	68.0
New Brunswick.....	50.3	49.7	Alberta.....	33.2	66.8

Ontario.....	92.8	7.2	Yukon and N.W.T.....	95.6	4.4

Table 8 gives summary figures of power production and distribution by province and Tables 9 and 10 give figures by type of production establishment. Total installed capacity in Canada amounted to 17,168,614 kw. in 1957, an increase of 1,268,434 kw. over 1956. Of the 1957 total, 13,444,450 kw. were accounted for by utilities and the remainder by industrial establishments. During 1956 and 1957 total sales to ultimate customers amounted to 57,436,143,000 kwh. and 60,356,171,000 kwh. respectively, of which nearly 99.7 p.c. was sold each year by utilities.

Sales to power customers made up about 64.9 p.c. in 1956 and 62.8 p.c. in 1957 of the total, sales to domestic and farm customers were about 25 p.c. and 26 p.c. and commercial sales about 9.3 p.c. and 10 p.c. in the respective years.

Exports to the United States in 1957 amounted to 4,829,843,000 kwh. compared with 5,103,669,000 kwh. in 1956.

Average domestic and farm consumption rose from 3,740 kwh. in 1956 to 3,960 kwh. in 1957. Among the provinces the averages in 1957 varied from a low of 1,367 kwh. in Prince Edward Island to a high of 5,895 kwh. in Manitoba. For domestic and farm customers the average annual bill was \$64.19 in 1957 as against \$61.41 in 1956, an increase of 4.5 p.c.

Although many utilities do not keep records on farm customers separate from other domestic customers, the data reported on farm service indicate that the average consumption rose from 3,127 kwh. per customer in 1956 to 3,415 kwh. in 1957 and the average bill was \$80.80 in 1957 compared with \$75.59 in 1956.

Data on the amount of energy generated by type of fuel were collected from utilities for the first time in 1956. Coal accounted for 53.8 p.c. of thermal generation, natural gas for 26.1 p.c. and petroleum fuels for 20.1 p.c. in that year and the percentages in 1957 were 55.4, 28.9 and 15.7, respectively.

Section 5.—Ownership and Regulation of Electrical Utilities*

Power is generated in Canada by publicly and privately operated utilities and by industrial establishments. Table 9, p. 564, giving summary statistics by type of establishment, shows that 50 p.c. of the total electric power generated in 1957 was produced by publicly operated utilities, 29 p.c. by privately operated utilities and 21 p.c. by industrial establishments. However, ownership differs greatly in different areas of the country. Quebec output, for instance, is predominantly from privately owned plants since a large portion of the power development in that province is connected with pulp and paper establishments and with the aluminum industry. In Ontario, on the other hand, almost all electric power is produced by a publicly owned utility, The Hydro-Electric Power Commission of Ontario. The distribution of power production in all provinces is shown clearly in Table 10, p. 564.

Because of the absence of free market determination of prices and regulation of services in an industry that is semi-monopolistic, regulation of electrical utilities has been attempted in most provinces. The governing bodies of the provincial electric power commissions, their functions and activities are summarized in the following paragraphs. Certain privately owned utilities are also covered.

Newfoundland.—There are no publicly owned hydro-electric systems in Newfoundland. The largest water power development in the province is located at Deer Lake. The plant, which is operated by Bowater's Newfoundland Pulp and Paper Company Limited, has a total capacity of 154,000 h.p. This Company develops hydro-electric energy at Deer Lake mainly for its own use in the manufacture of pulp and paper and also supplies electric power to the Buchans Mining Company for its mining operations and to the Newfoundland Light and Power Company Limited which distributes electricity to consumers in Corner Brook and adjacent communities in the Bay of Islands sections.

The electrical distribution system of the Anglo Newfoundland Development Company Limited supplying the towns of Grand Falls, Windsor, Bishop's Falls and Botwood was acquired by the Newfoundland Light and Power Company Limited in 1956.

The Company, in addition to its seven hydro plants, operates a steam generation plant at St. John's. The Company recently acquired the right to supply power to the International Airport at Gander, the new Township of Gander nearby, and the town of Lewisporte providing for that purpose a 17,000-h.p. hydro development at Rattling Brook, Norris Arm.

The United Towns Electric Company Limited operates eight hydro plants and two diesel plants, the latter located on the Burin Peninsula. A subsidiary, the West Coast Power Company, operates diesel generators at St. George's and Port aux Basques, and a hydro plant at Lookout Brook. Another subsidiary, the Wabana Light and Power Company, distributes electricity to the town of Bell Island, the power being purchased from the Newfoundland Light and Power Company Limited. The Union Electric Light and Power Company operates plants at Clarendville, Port Union and Trinity.

Power plant construction recently completed or under way is outlined at pp. 555-556.

Prince Edward Island.—The area of Prince Edward Island is only 2,184 sq. miles and three-quarters of its population are rural dwellers. Electric power must therefore be supplied to rather densely populated rural districts interspersed with a considerable number of small municipalities. Power is mainly generated in thermal and diesel plants using imported fuels.

* Revised by the various provincial commissions or authorities concerned.

The Maritime Electric Company Limited supplies 53,471,340 kwh. of the Island's requirements of 57,233,820 kwh., with a system peak of 12,800 kw., from its Charlottetown plant. The plant consists of six steam turbines of 22,500 kw. total capacity. In 1957 the Company served 11,966 rural and urban customers over 850 miles of company-owned distribution line with an additional 1,968 rural customers served by 480 miles of distribution line owned by the provincial government but connected with the company system. The town of Summerside is connected with Charlottetown by a 33-kv. transmission line and purchases approximately 6,500,000 kwh. annually from the Maritime Electric Company.

Two other power systems supply the remainder of the power consumed. The town of Summerside's station is powered by nine diesel engines, has a total capacity of 2,835 kw. and an annual energy production of 3,392,180 kwh. The station serves 2,210 customers in Summerside and 1,169 customers over 132 miles of rural lines. Approximately 882,976 kwh. of energy is sold to the Scales Hydro Electric Company Limited. The Scales Hydro Electric Company Limited operates a small station in Freetown on the Dunk River. Its total capacity is 250 kw., of which 175 kw. is generated by water power and the remainder by diesel engines. The annual energy production is 370,300 kwh. and 694 customers in surrounding areas are served over 29 miles of distribution line.

Nova Scotia.—The Nova Scotia Power Commission was created under the Power Commission Act of 1919 with the function of supplying electric power and energy by the most economical means available. The Rural Electrification Act of 1937 greatly increased the possibilities for retail service by providing financial assistance to equalize cost and revenue of extensions approved by the Governor in Council. In 1941 an amendment to the Power Commission Act authorized the Commission, subject to the approval of the Governor in Council, to regulate and control the generation, transmission, distribution, supply and use of power in the province. Certain investigatory work is carried on in the province by the Federal Government in close association with the Commission, but the control of water resources is vested in the Crown and administered under the provisions of the Nova Scotia Water Act of 1919. The Commission pays regular fees for water rights.

Financially the Commission is self-supporting, repaying borrowings from revenue. The balance sheet at Nov. 30, 1957, showed total fixed assets of \$48,361,690 including work in progress amounting to \$3,296,653. Current assets amounted to \$900,706. Liabilities were as follows: fixed \$38,254,276; current \$3,790,909; contingency and renewal reserves \$4,746,440; sinking fund reserves \$7,798,652; and general reserves and special reserves \$2,414,832.

The initial development of the Commission was an 800-h.p. installation on the Mushamush River which went into operation in 1921 and delivered 208,752 kwh. in the first complete year of operation. Succeeding years showed a marked growth in installed capacity which at Nov. 30, 1957, reached 113,000 h.p. in hydraulic turbines, 2,200 h.p. in diesel units and 41,125 kw. in steam turbines. Total generation for the year was 453,980,807 kwh.

The territory of the Commission extends over the entire province and embraces six systems which include 25 generating stations and over 4,500 miles of transmission and distribution lines through which wholesale and retail customers received 448,510,014 kwh. during the year ended Nov. 30, 1957. Power plant construction recently completed or under way is outlined at pp. 555-556.

The installed capacity and annual output of the various systems of the Nova Scotia Power Commission are given in Table 13.

New Brunswick.—The New Brunswick Electric Power Commission was incorporated under the Electric Power Act, 1920. Generating stations owned by the Commission at Mar. 31, 1957, were as follows:—

Plant	Type	Capacity	Plant	Type	Capacity
		h.p.			h.p.
Musquash.....	Hydro.....	9,320	Campobello.....	Diesel.....	300
Tobique.....	Hydro.....	27,000	Grand Manan.....	Diesel.....	1,040
Grand Lake.....	Steam.....	58,700	Shippegan.....	Diesel.....	1,340
Saint John.....	Steam.....	21,500	St. Quentin.....	Diesel.....	750
Chatham.....	Steam.....	46,300			
			TOTAL CAPACITY.....		166,250

All the above generating units with the exception of St. Quentin, Campobello and Grand Manan, were interconnected in a province-wide grid system. The statistical information given in Table 14 shows the growth of the Commission's undertakings since 1953.

Power plant construction recently completed or under way in New Brunswick is outlined at pp. 555-556.

Quebec.—*The Quebec Streams Commission.*—Created by S.Q. 1 Geo. V, c. 5, and given additional powers by 3 Geo. V, c. 6 (R.S.Q. 1925, c. 46) and 20 Geo. V, c. 34, the Quebec Streams Commission was authorized to ascertain the water resources of the province, to make recommendations regarding their control, and to construct and operate certain storage dams to regulate the flow of streams. It assisted companies engaged in such work by the systematic collection of data on the flow of the principal rivers and on meteorological conditions, by investigation of numerous water power sites and determination of the longitudinal profile of a large number of rivers.

On Apr. 1, 1955, the Quebec Streams Commission was abolished and its powers and attributions transferred to the Hydraulic Resources Department, Province of Quebec. The rivers controlled by the Commission at the time of transfer, either by means of dams on the rivers or by regulating the outflow of lakes at the headwaters, were: the St. Maurice, the Gatineau, the Lièvre, the St. Francis, the Chicoutimi, the Au Sable, and the Métis. The Commission also operated nine reservoirs on North River, two in the watershed of the Ste. Anne de Beaupré River, and one at the outlet of Lake Morin on Rivière du Loup (lower).

Other Reservoir Control.—Storage reservoirs otherwise controlled or operated are: the Lake St. John, the Lake Manouane and Passe Dangereuse on the Peribonca River, and the Onatchiway on the Shipshaw River; Témiscouata Lake on the Madawaska River, controlled by the Gatineau Power Company; Memphremagog Lake on the Magog River, controlled by the Dominion Textile Company; Témiscamingue and Quinze Lakes on the Ottawa River, controlled by the federal Department of Public Works; Kipawa Lake on the Ottawa River, controlled by the Gatineau Power Company; and Dozois Lake on the upper Ottawa River and Pipmaukin Lake in the Bersimis River watershed, controlled by the Quebec Hydro-Electric Commission.

Power developments on the Saguenay River, benefiting from the Peribonca and Lake St. John reservoirs, have a total capacity of 1,950,000 h.p.

The Quebec Hydro-Electric Commission.—The Quebec Hydro-Electric Commission was established by S.Q. 8 Geo. VI, c. 22, with the object of supplying power to the municipalities, to industrial and commercial undertakings and to citizens of the Province of

Quebec at the lowest rates consistent with sound financial administration. The Commission at the end of 1956 controlled, among other assets, the following hydro-electric plants:*

<u>Plant</u>	<u>River</u>	<u>Installed Capacity</u> h.p.
Cedars.....	St. Lawrence.....	206,400
Sault au Recollet.....	Rivière des Prairies.....	60,000
Beauharnois.....	St. Lawrence.....	1,400,000
Rapid VII.....	Upper Ottawa.....	64,000
Rapid II.....	Upper Ottawa.....	48,000
Bersimis No. 1.....	Bersimis.....	450,000

The Commission operates a public utility system which supplies the electric light and power requirements of Metropolitan Montreal and surrounding districts, embracing a population of nearly 2,000,000. From the Cedars plant, electric energy is supplied to the Aluminum Company of America at Massena, N.Y., and through the Beauharnois Light, Heat and Power Company power is sold to The Hydro-Electric Power Commission of Ontario. Sales involved are in the neighbourhood of 100,000 h.p. to Massena, N.Y., and 250,000 h.p. to Ontario.

* The Commission also purchases 135,000 h.p. from the Shawinigan Water and Power Company.

15.—Growth of the Quebec Hydro System, 1947-56

The Commission delivers some 30,000 h.p. on the south shore of the St. Lawrence River in the Gaspé area—power temporarily purchased from the Manicouagan Power Company and transmitted across the River through a 69-kv. submarine cable, over a distance of 34 miles. The Commission also purchases about 13,000 h.p. from Saguenay Transmission Company for delivery to mining companies in the Chibougamau area. It is completing the construction of a storage reservoir on the Toulmoustou River, a tributary of the Manicouagan River on the North Shore. The Lac Ste. Anne reservoir, as it will be called, will permit regulation and control of the flow of the Lower Manicouagan River.

Power plant construction recently completed and under way in Quebec is outlined at pp. 556-557.

Ontario.—The Hydro-Electric Power Commission of Ontario is a corporate entity, a self-sustaining public enterprise endowed with broad powers with respect to the supply of electricity throughout the Province of Ontario. Its authority is derived from an Act of the Provincial Legislature passed in 1906 to give effect to recommendations of earlier advisory commissions that the water powers of Ontario should be conserved and developed for the benefit of the people of the province. It now operates under the Power Commission Act (7 Edw. VII, c. 19) passed in 1907 as an amplification of the Act of 1906 and subsequently modified from time to time (R.S.O. 1950, c. 281, as amended). In addition to administering the enterprise over which it has direct control, the Commission exercises certain regulatory functions with respect to the province-wide group of municipal electrical utilities which it serves.

The Commission may have from three to six members, all of whom are appointed by the Lieutenant-Governor in Council. One commissioner must be, and a second commissioner may be, a member of the Executive Council of the Province of Ontario. In the conduct of the Commission's affairs, the commissioners are responsible for, and are the final authority in, establishing policy.

The basic principle governing the financial operations of the Commission and its associated municipal utilities is that electrical service is provided at cost. The Commission interprets cost as including payments for power purchased, charges for operating and maintaining the power systems, and related fixed charges. The fixed charges represent interest on debt, provisions for depreciation, allocations to reserves for contingencies and rate stabilization, and the further provision of a sinking fund reserve for retiring the Commission's capital debt. While the enterprise from its inception has been self-sustaining, the province guarantees the payment of principal and interest on all bonds issued by the Commission and held by the public. In addition, over a period of nearly forty years the province has materially assisted the development of agriculture by contributing half the capital cost of rural distribution facilities.

For the financial and administrative purposes of the Commission, the province is divided into two parts.* The roughly triangular part of the province lying south of Lake Nipissing and the French and Mattawa Rivers is served by the Southern Ontario System, a fully integrated power network comprising the Niagara, Eastern Ontario and Georgian Bay Divisions. The part lying to the north is served by the Northern Ontario Properties, comprising the Northeastern and Northwestern Divisions. The Southern Ontario System is a co-operative system primarily serving a group of 325 municipalities receiving power at cost under contracts established according to the provisions of the Power Commission Act. The Northern Ontario Properties are not a co-operative system but the power facilities of its Northwestern Division serve a group of eight municipal utilities at cost. Apart from the supply of power to these cost-contract customers, the Northern Ontario Properties are held and operated in trust for the Province of Ontario. Each of the two northern divisions is an integrated power system, the Northeastern Division being also interconnected with the Southern Ontario System. For purposes of administration the whole area served by the Commission is subdivided into nine regions,

* Information relating to the establishment of the original administrative systems and to the consolidations leading to the present operating set-up is given in the 1957-58 Year Book, p. 580.

seven in the south and two in the north, with regional offices located in nine major municipalities. At present the two northern regions coincide with the Northeastern and Northwestern Divisions.

The primary function of the enterprise is to provide electric power by generation or purchase, and through a province-wide network of transformation and transmission facilities, to deliver this power either for resale by the associated municipal utilities or for use by some 200 industrial customers served directly by the Commission. This aspect of operations represents about 90 p.c. of the Commission's energy sales. The municipal utilities, in their turn, administered by local commissions and functioning under the general supervision of the Provincial Commission as provided for in the Power Commission Act and the Public Utilities Act, own and operate their own distribution systems to serve ultimate customers in most cities and towns, in many villages, and in certain township areas. Energy sales representing the remaining 10 p.c. of the Commission's total are carried out through Commission ownership and operation of distribution facilities. These facilities provide retail service on behalf of the various townships to ultimate customers in the rural areas of the province, and similar service to customers in a limited number of municipalities supplied by what are known as "Local Systems". Since 1944 the Commission's rate structure applying to rural customers designated as farm, hamlet, commercial and summer service has been uniform throughout the province.

The growth of the Commission's physical and financial resources reflects the remarkable industrial and social development of the province. In 1914 the Commission purchased its first generating station, Big Chute on the Severn River. Later in the same year the first Commission-built generating station was placed in service at Wasdell Falls, also on the Severn River. This early program of purchase and construction of generating stations reached a climax in the great Queenston-Chippawa development, later renamed Sir Adam Beck-Niagara Generating Station No. 1 in honour of the first Chairman of the Commission. This station first delivered power in 1922 but four years later the Commission found it necessary to negotiate for the extensive purchase of power from large Quebec suppliers in order to satisfy Ontario's steadily growing power demands—demands that have continued to increase over the years.

The extensive construction program undertaken since the end of World War II has included the development of three stations on the Ottawa River with a combined capacity of 699,000 kw.; the construction of Sir Adam Beck-Niagara Generating Station No. 2 and its associated pumping-generating station on the Niagara River where 1,370,000 kw. of capacity have been installed; and the construction of Robert H. Saunders-St. Lawrence Generating Station on the St. Lawrence River. The St. Lawrence development is the last major hydraulic development in the Southern Ontario System. Initially placed in service in July 1958, it will be completed with an installed capacity of 820,000 kw. in 1960. During the same postwar period more than 400,000 kw. have been developed at nine hydro-electric sites in northern Ontario. Additional sites in the north are being developed, and others will be developed from time to time as the changing economic situation may require.

At the same time an aggressive program is being carried on for the construction of thermal-electric stations. This program, already well begun with the placing in service of large stations in Toronto and Windsor between 1951 and 1953, now includes a second large thermal-electric development, Lakeview Generating Station near Toronto, and the initial installation of a 100,000-kw. unit at a station in Fort William to be known as Thunder Bay Generating Station. Meanwhile the Richard L. Hearn Generating Station in Toronto is being expanded to three times its present 400,000-kw. capacity.

The Commission is also engaged, together with Atomic Energy of Canada Limited and the Canadian General Electric Company Limited, in the construction of the 20,000-kw. Nuclear Power Demonstration plant close by Des Joachims Generating Station in the Ottawa River Valley.

The power development program of Ontario Hydro as at Dec. 31, 1957 is given in Table 17. Hydro, thermal and nuclear power plant construction recently completed or under way in Ontario is outlined at pp. 557-558.

During 1957 the Commission's investment in fixed assets increased by \$197,612,118 and at the end of the year amounted to \$1,930,606,714. Accumulated depreciation provided on these assets was \$207,949,024. Total assets after deducting accumulated depreciation were \$2,254,503,479.

In 1957 a total of 351 municipal utilities purchased power from the Commission under cost or fixed-rate contracts for resale to their customers. These utilities had fixed assets amounting to \$327,925,974, against which they had provided \$68,975,083 in accumulated depreciation. Their total assets after deducting this accumulated depreciation were \$508,848,141, of which \$200,293,236 represented the equity acquired in the Commission's systems by the utilities operating under cost contracts.

¹ Dependable peak capacity—the amount of power which resources can be expected to supply at the time of the system primary peak requirements, assuming that all units are available and that the supply of water is normal. This capacity will vary from time to time in accordance with changing conditions. The capacity of a source of purchased power is based on the terms of the purchase contract.

¹ Sum of the maximum 20-minute coincident peak loads (primary plus secondary) of each of the systems operated by the Commission, given in terms of net output of the sources of supply to each system for the last month of each fiscal year.

Manitoba.—The Manitoba Power Commission was established in 1919 for the purpose of distributing electric energy throughout the province, with the exception of the Metropolitan Winnipeg area. An agreement, signed in 1955 by the Manitoba Hydro-Electric Board, the City of Winnipeg, the Winnipeg Electric Company and The Manitoba Power Commission, provided for the acquisition by the Commission of the distribution properties of the Winnipeg Electric Company and of the City of Winnipeg Hydro Electric System in the suburban areas adjacent to the city. The transfer of these properties became effective Apr. 1, 1955. The utility currently operates under The Manitoba Power Commission Act (R.S.M. 1954, c. 203), as amended.

The Commission's supply of electric energy for distribution is purchased from the Manitoba Hydro-Electric Board at various points in or near Winnipeg. The Commission has gradually acquired virtually all the municipally owned and local privately owned distributing plants within the province and now supplies service from a widespread network of transmission lines. A program of rural electrification, started in the late 1930's and designed to bring hydro-electric power at uniform service rates to all rural centres with a population of 20 or over, has been completed and currently serves 524 centres. The Commission also serves 41,578 farms. The Commission took over the diesel generating plant and local distribution system at The Pas in northern Manitoba during 1958.

Plant additions recently completed or under way in Manitoba are outlined on p. 559.

Saskatchewan.—The Saskatchewan Power Corporation was established Feb. 1, 1949, and now operates under the provisions of the Power Corporation Act, 1950 (S.S. 1950, c. 10) as amended. It succeeded the Saskatchewan Power Commission which operated from Feb. 11, 1929 to Jan. 31, 1949. The original functions of the Corporation included the generation, transmission, distribution, sale and supply of hydro and steam electric energy. Since 1952 the Corporation has been authorized to produce or purchase, and to transmit, distribute, sell and supply natural or manufactured gas.

In 1957 the Corporation served 865 urban communities (with six or more customers) in retail sales, as well as the cities of Saskatoon, Swift Current and Weyburn, the town of Battleford, and the hamlet of Waskesiu in bulk sales. Activities of the Corporation are extended to the entire province with the exception of such cities as Regina, which owns and operates municipal plants and a distribution system, and Moose Jaw, where the local plant and distribution system is owned and operated by National Light and Power Company Limited.

At the end of 1957 the Corporation served 178,567 customers, 146,994 of whom were retail customers and 31,573 of whom were located in communities supplied with power through bulk sales. The retail customers included 102,249 urban customers and 44,745 customers classified as rural, predominantly farmers. During 1957 all customers absorbed 780,613,534 kwh. of which 742,983,567 kwh. were generated in Corporation plants and 37,629,967 kwh. were bought in bulk from Regina and from National Light and Power utilities. At the end of the year the Saskatchewan Government had invested a total of \$142,451,682 in Corporation electric and natural gas assets.

During 1957 the Corporation owned and operated three steam generating plants at Estevan, Prince Albert and Saskatoon, which supplied 80 p.c. of total system power requirements, and three gas and dual fuel plants at Kindersley, Swift Current and Unity, which supplied most of the remainder. Four small diesel plants (at Yorkton, Meadow Lake, Maple Creek and Hudson Bay) acted as standby plants and supplied less than 0.5 p.c. Total system capability at the end of 1957 was assessed at 235,720 kw. with 200,000 kw. located in steam plants, 30,000 kw. in gas and dual fuel installations and 5,720 kw. in diesel plants.

By the end of 1957 the Corporation owned and operated 53,800 miles of transmission and rural lines. Of the total, 6,500 miles of line were added in 1957, comprising 175 miles of 72,000-volt line, 75 miles of 25,000-volt line, and 6,250 miles of 14,400-volt farm line for rural electrification. Ninety miles of three-phase transmission line for service to oilfields

were also installed, and 250 miles of transmission line were rebuilt. New high-voltage transformer stations constructed had an installed capacity of 70,000 kva. and transformer capacity added to the subtransmission system totalled 12,225 kva.

Plant additions recently completed or under way in Saskatchewan are outlined at p. 559.

21.—Growth of the Saskatchewan Power Corporation, 1948-57

NOTE.—Figures for 1929-33 are given in the 1947 Year Book, p. 499; for 1934-46 in the 1950 edition, p. 578; and for 1947 in the 1957-58 edition, p. 586.

Alberta.—Public ownership of power generating and distributing systems in Alberta is confined to certain urban municipalities. The regulatory authority over privately owned systems is the Board of Public Utility Commissioners which has jurisdiction over the distribution and sale of electricity. The Board has power to hold investigation upon complaint made either by a municipality or by a utility company and, following such investigation, may fix just and reasonable rates.

There are three private utility services in the province: Calgary Power Limited, Canadian Utilities Limited, and Northland Utilities Limited. A synopsis of these services is given below; plant additions recently completed or under way are outlined at p. 559.

Calgary Power Limited.—This Company has eleven hydro generating plants on the Bow River and its tributaries, west of Calgary, namely: Horseshoe Falls, Kananaskis Falls, Ghost River, Cascade, Barrier, Spray, Rundle, Three Sisters, Bears paw, Pocatererra, and Interlakes. The Company also operates a steam plant of 88,000 h.p. at Wabamun, west of Edmonton. At Dec. 31, 1957, the Company's total plant capacity was 397,450 h.p. All the hydro plants except Bears paw are operated by remote control from the Kananaskis Falls plant.

The Company has five reservoirs on the Bow River and its tributaries:—

Lake Minnewanka.....	180,000 acre-feet
Interlakes (Upper Kananaskis Lake).....	100,000 acre-feet
Pocatererra (Lower Kananaskis Lake).....	50,000 acre-feet
Spray Lakes.....	200,000 acre-feet
Ghost.....	74,000 acre-feet

An agreement with the City of Medicine Hat provides an additional 33,500 h.p. to the Company from the city's steam plant. Power from these plants is fed into a transmission network which supplies the entire electricity requirements of the cities of Calgary, Red Deer and Wetaskiwin, about 419 towns, villages and hamlets, and a substantial industrial load in central and southern Alberta. This transmission network is also connected with the municipal utilities of the cities of Edmonton and Lethbridge, Canadian Utilities Limited at Drumheller, Vegreville and Vermilion, and the East Kootenay Power Company in the Crowsnest Pass. A second 88,000-h.p. unit at the Wabamun steam plant was completed in 1958, bringing the Company's total plant capacity to 485,450 h.p.

The Company has about 4,500 miles of main transmission lines and 2,700 miles of distribution lines extending from Plamondon in the north, Milk River and Waterton in the south, and from Chauvin, Macklin (Sask.), Brooks and Bow Island in the east, to Nordegg, Banff and Crownest Pass in the west. The cities of Calgary and Red Deer, and the towns of Ponoka, Fort Macleod and Cardston are supplied on a wholesale basis, but all other points on the same system are supplied on a retail basis. At Dec. 31, 1957, electric pumping service was being supplied to over 3,200 oil wells, as well as service directly to other sectors of the oil industry, such as gathering stations, refineries and pipeline pumping. Service was also provided to several industrial plants near Edmonton.

An extensive farm electrification program is in progress in Alberta and at Dec. 31, 1957, the Company was serving 29,306 farms. Calgary Power constructs, operates and provides for the engineering of these co-operatives through a non-profit subsidiary (Farm Electric Services Limited), energy being supplied to the farm co-operative consumers at cost.

Canadian Utilities, Limited.—This Company supplies three areas in the province: the Grande Prairie District, outlined by Hythe, Spirit River, Lesser Slave Lake, Smith, Fox Creek and the city of Grande Prairie; the Vegreville District, outlined by Vermilion, Vegreville, Smoky Lake, Cold Lake and the city of Lloydminster; and the Drumheller District, outlined by Three Hills, Stettler, Forestburg, Consort, Empress, Cessford and the city of Drumheller. Three inter-connected plants at Battle River, Vermilion and Drumheller supply the Vegreville and Drumheller Districts. The Battle River plant has a 32,000-kw. coal-fired steam unit; the Vermilion plant has an 8,500-kw. gas turbine (the first gas-turbine powered generator in Canada) and 9,000 kw. in gas-fired steam equipment; and the Drumheller plant has 19,000 kw. in coal-fired steam equipment. Three inter-connected plants at Grande Prairie, Fairview and Sturgeon Lake supply the Grande Prairie District. The Grande Prairie plant has 5,700 kw. in diesel and gas-diesel equipment; at Fairview there is a 1,200-kw. natural gas unit, and at Sturgeon Lake there is a 10,000-kw. gas turbine which uses sour flare-gas from nearby oilfields as fuel. The town of Smith is served separately by a 110-kw. diesel unit.

There are tie lines with Calgary Power Limited at Vermilion, Vegreville and Drumheller; and with Northland Utilities Limited at Fairview and Valleyview. The Company serves over 39,000 customers, covering approximately 33,000 sq. miles, including 214 towns, villages and hamlets, and 129 rural electrification associations, through a network of approximately 3,800 miles of transmission and distribution lines, and 9,400 miles of rural electrification association lines.

Since 1949, rural electrification in the territory served has been extended to farmers on a co-operative basis whereby the rural electrification association systems are constructed and operated at cost for the farmers by the Company. Over 9,700 farmers are receiving electric power service. In addition, the Company operates a subsidiary, McMurray Light and Power Co. Limited, with a 525-kw. installation, serving 330 customers in the town of McMurray. In 1958, the Company acquired the Yukon Hydro Company Limited and the Yukon Electrical Company Limited, operating two installations consisting of 1,650 kw. in hydro units and 1,000 kw. in diesel units serving 1,500 customers in Whitehorse.

Northland Utilities Limited.—This Company, with headquarters at Edmonton, supplies electric service to 8,100 customers located in 29 communities. Diesel or gas-fueled generating plants are located in Jasper, Athabasca, High Prairie, Fort Vermilion, McLennan, Peace River, Fairview, Lac la Biche in Alberta and at Hay River in the Northwest Territories. A hydro-electric generating plant augments the supply at Jasper.

Through 125 miles of 69,000-volt transmission line and 250 miles of 24,000-volt transmission line, service is distributed to 27 additional communities. Also, approximately 1,200 farm customers are served by rural co-operative lines. A subsidiary, Uranium City Power Company Limited, generates and distributes electricity to 600 customers in Uranium City, Sask.

Northland Utilities supplies 3,500 customers with natural gas in 13 communities in northern Alberta—Fairview, Bluesky, Whitelaw, Brownvale, Berwyn, Grimshaw, Grande Prairie, Spirit River, Sexsmith, Rycroft, Woking, Clairmont, and Peace River. A subsidiary, Northland Utilities B.C. Limited, supplies gas to 2,500 customers in Dawson Creek and Pouce Coupe, B.C.

British Columbia.—The British Columbia Power Commission was appointed Apr. 17, 1945, under the provisions of the Provincial Electric Power Act. Operations were commenced in August of the same year with the acquisition of electrical properties in several parts of the province. The following statement shows the growth in the number of customers from 1949 to 1958:—

Year Ended Mar. 31—	Services Acquired	Services Installed	Total Services for Period	Cumulative Services to End of Period
	No.	No.	No.	No.
1949.....	831	3,318	4,149	31,619
1950.....	4,686	3,321	8,007	39,626

TOTALS.....	32,457	42,823	75,280	...

Continued expansion in generating capability, transmission and distribution plant, power requirements, installed services and revenues marked the year ended Mar. 31, 1958, capital expenditure reaching an all-time high of \$51,341,000. Revenue increased by 21.1 p.c. and expenditure by 37.9 p.c. of which some 13 p.c. was attributable to power purchased to conserve the Commission's own water services while a new reservoir was being filled, and 18 p.c. was attributable to an increase in fixed charges. The resulting operating surplus was \$102,756 (before provision for hydro deficiency). Details of construction recently completed or under way are given on pp. 559-560.

The Northwest Territories and Yukon Territory.—The Northern Canada Power Commission was created by Act of Parliament in 1948 to bring electric power to points in the Northwest Territories where a need developed and where power could be provided on a self-sustaining basis. By legislation passed in 1950, the Act was extended to include Yukon Territory. The name of the Commission, formerly Northwest Territories Power Commission, was changed in 1956.

The Northern Canada Power Commission has authority to construct and operate power plants as required in a territory having an area of over 1,500,000 sq. miles. The Commission is continually investigating power needs in this large area and studying reports on hydro-electric power sites.

The Commission has a hydro-electric power development in operation on the Snare River about 94 miles northwest of Yellowknife, N.W.T., from which power has been supplied to the mines in the Yellowknife area since the autumn of 1948.

A diesel generating station and distribution system was put into operation at Fort Smith, N.W.T., in October 1950, and at Fort Simpson in October 1956 to supply the federal Departments of Northern Affairs and National Resources, Transport, National Defence (RCCS), Health and Welfare, and Public Works as well as the Royal Canadian Mounted Police and private commercial consumers and residents of the settlements.

A hydro-electric development on the Mayo River approximately six miles north of Mayo Landing, Y.T., completed in December 1952, delivers power to the mining developments in that area and to the settlement of Mayo Landing. Recently completed and projected construction is outlined at p. 561.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

PART I.—FISHERIES

Section 1.—Canadian Commercial Fisheries Resources

Canada has the enviable position of being the country closest to some of the world's most prolific fishing grounds and as a consequence is a principal fish producer and exporter of fish products. Rich harvests are drawn from the Atlantic and Pacific Oceans and from the country's many freshwater lakes and rivers.

Canada's commercial fisheries resources, including a detailed account of the Atlantic, Pacific, freshwater and northern fisheries, are covered in the 1955 Year Book, pp. 578-590.

Section 2.—Governments and the Fisheries

The British North America Act gave the Federal Government full legislative jurisdiction for the coastal and the inland fisheries of Canada and under this Act laws are made for the protection, conservation and development of the fisheries throughout the country. However, the provinces have, by agreement, assumed administrative responsibilities in varying degree. Consequently, though all the regulations governing fishing are made by the Federal Government, the work of administering the fisheries (enforcing the different laws and regulations, inspecting fish products, issuing licences, etc.) is done without duplication of staff either by federal or by provincial officers, according to arrangement.

Specifically, all tidal or sea fisheries except those of the Province of Quebec are administered by the federal Department of Fisheries, and the freshwater or non-tidal fisheries with some exceptions are administered by the provincial departments. Quebec takes responsibility for all its fisheries including those in salt waters. Ontario, Manitoba, Saskatchewan and Alberta administer their freshwater species. In British Columbia, provincial government control extends to the freshwater forms and the Federal Government is responsible for marine and anadromous species. In Prince Edward Island, Nova Scotia, New Brunswick, Newfoundland and the Yukon and Northwest Territories, the Federal Government maintains complete control; administration of the fisheries of the National Park areas throughout Canada is the responsibility of the Canadian Wildlife Service, Department of Northern Affairs and National Resources (see pp. 22-23).

Subsection 1.—The Federal Government*

The work of the Federal Government in the conservation, development and general regulation of the nation's coastal and freshwater fisheries is performed by three agencies under the Minister of Fisheries:—

- (1) The Department of Fisheries proper with headquarters at Ottawa, Ont., and area offices under Area Directors at Vancouver, B.C., Winnipeg, Man., Halifax, N.S., and St. John's, Nfld.
- (2) The Fisheries Research Board of Canada with headquarters at Ottawa and eight stations across Canada.
- (3) The Fisheries Prices Support Board with headquarters at Ottawa.

A brief outline of the functions of agencies (1) and (3) is given in this Subsection followed by a special article giving in detail the work of the Fisheries Research Board (2).

The Department of Fisheries.—The chief responsibilities of the Department of Fisheries throughout Canada are, in brief: to conserve and develop Canada's primary fishery resources; to encourage the development of the fishing industry in the national economy; to inspect fish products, establish standards of quality and promote the optimum utilization of the resource; and to develop a proper public understanding of the resource and the industry.

The larger part of the staff of the Department is stationed in the field and is composed mainly of protection and inspection officers. The protection officers, including those on the Department's 83 patrol and protection vessels, are concerned with the enforcement of the conservation regulations under the Fisheries Act and other Acts designed to ensure a continuing maximum yield of fish and are also responsible for the inspection of fish products and processing plants under the Fish Inspection Act and relevant section of the Meat and Canned Foods Act.

A conservation program is carried out by the Conservation and Development Service of the Department. Protection officers enforce regulations pertaining to restricted areas, close seasons, limitations in location and types of gear, and also inspect spawning streams and keep them clear of obstructions. Biologists investigate such problems as pollution and water supply, and engineers construct fishways to enable fish to bypass obstructions of all kinds. Hatcheries are maintained to restock waters where the fisheries are under federal administration.

For the past few years a bounty has been paid for the killing of the parasite-carrying harbour seals along the Atlantic and Pacific Coasts at a rate of \$10 for adults and \$5 for young seals. Total payments for the year ended Mar. 31, 1959, amounted to \$34,891.

Inspection of fish and fish products to ensure a high standard of quality is carried out by the Inspection and Consumer Service, and fish inspection laboratories are maintained on the Atlantic and the Pacific Coasts and in Toronto and Winnipeg. A staff of home economists operates test kitchens in Ottawa, Toronto, Vancouver, Montreal, Halifax, Edmonton and Winnipeg, and conducts demonstrations and lectures on methods of preparing and cooking fish and fish products.

Through the medium of printed material, films, radio, television and exhibitions, the Information and Educational Service of the Department informs the public on the various aspects of the industry and the work of the fisheries service, with the object of developing a better understanding of the resource and those engaged in its exploitation. This Service works closely with the Conservation and Development Service in matters concerning the conservation of fisheries and with the Inspection and Consumer Service toward encouraging increased consumption of Canadian fish products in the United States and other markets.

The Economics Service engages in two related fields of responsibility: (1) to provide the government and the commercial fishing industry with current information, including statistical data, under the general heading of trade intelligence, and (2) to carry out studies and investigations in the primary fisheries and in the processing and distribution of fish

* Revised by the Department of Fisheries, Ottawa.

products. In the first field, the Service works in close co-operation with the Dominion Bureau of Statistics and the foreign trade branches of the Department of Trade and Commerce; in the second, there is similar collaboration with the Fisheries Research Board. In both, a necessary contribution is made to the formulation of policy for fisheries management, industrial development and market services.

In addition to these regular services the Department assists the commercial fishing industry in several special ways. To promote efficient primary fishing operations and improve the marketing of fishery products, assistance is provided for the construction of draggers and long-liners and for bait-freezing and storage facilities on the Atlantic Coast. For each new trawler built in Canada the owner is permitted a licence to operate a used trawler imported from either the United Kingdom or the United States and registered in Canada after payment of duty. An applicant wanting only one trawler may import a used one from the United Kingdom without having to lay down a new keel in Canada. This policy applies to ships purchased from any country entitled to most-favoured-nation treatment in accordance with Canada's obligations as a signatory of the General Agreement on Tariffs and Trade.

The Fishermen's Indemnity Plan affords low-cost protection from losses of boats and lobster traps through storms and other causes. The Plan, in operation since 1953, meets a long-standing need on the part of small-scale individual fishermen. Vessels valued at from \$250 to \$10,000 may be insured with payment of a premium of 1 p.c. of the appraised value per annum. Up to Mar. 31, 1959, a total of 5,131 fishing vessels with an appraised value of \$14,625,885 had been insured under the Plan. In response to considerable demand for a similar type of protection against unusual losses of fishing gear and equipment other than vessels, a first step was taken by the introduction of regulations giving a measure of compensation to lobster fishermen suffering abnormal losses of lobster traps, provided that a small premium has been paid by the fisherman. The premium rate varies in accordance with conditions in the different fishing areas of the Atlantic Provinces and Quebec but has been kept at a low figure. Indemnity is provided at about 50 p.c. of the value of the traps.

The Department also provides financial assistance to educational institutions agreeing to carry out specialized educational work among fishermen.

International Fisheries Conservation.—Conservation of the resources of the high seas can be effected only with regulations, and for this purpose international treaties have had to be made. Canada's obligations under such treaties with the United States and other countries are administered by the Department of Fisheries.

Canada and the United States have led the world in joint fisheries conservation development. Major examples of this joint effort are the International Pacific Halibut Convention, concerned with the preservation of the halibut stocks of the north Pacific and the Bering Sea, and the International Pacific Salmon Fisheries Convention, concerned with the conservation and development of the sockeye and pink salmon of the Fraser River. Investigations carried out under the auspices of Commissions appointed under these conventions, subsequent regulation and limitation of catches, and the construction of salmon fishways appear to have been successful in arresting and reversing an earlier trend towards depletion of these fisheries. Another example of restoring a depleted marine resource by international agreement and action is that of the fur seals of the Pribilof Islands in the Bering Sea. Under a treaty signed in 1911, known as the (North Pacific) Sealing Convention, pelagic sealing was prohibited while the animals were migrating to and from the Pribilofs where most of them breed. This treaty had been signed by the United States, Canada, Russia and Japan, and was one of the earliest conventions on resources of the sea. In 1941 Japan abrogated the treaty and the following year Canada and the United States signed a Provisional Fur Seal Agreement under which Canada, in return for abstaining from pelagic sealing, received 20 p.c. of the annual catch, which was supervised by the United States. A conference to re-negotiate the original convention

for the management of north Pacific fur seals was begun in Washington in November 1955, with representatives present from the four countries which had been signatory to the 1911 treaty. A new settlement was signed by the original four countries on Feb. 9, 1957.

In 1949 the Government of Canada became a signatory, along with nine other countries, to the International Northwest Atlantic Fisheries Convention which came into force in 1950. The Commission established under this Convention, with headquarters at Halifax, N.S., makes scientific investigations of the fishery resources of the northwest Atlantic. The Commission has no regulatory powers but can make recommendations to the respective governments regarding measures that may be necessary for maintaining the stocks of fish that support the international fisheries in the Convention area. Treaty signatories are: Canada, Denmark, Iceland, the United States, the United Kingdom, France, Italy, Norway, Portugal and the Federal Republic of Germany.

A step towards international action in regulating the high seas fisheries of the northern Pacific Ocean was achieved in December 1951 when Canada, the United States and Japan conferred at Tokyo. The resulting Convention was ratified by the three contracting governments and instruments of ratification were deposited at Tokyo in June 1953. The treaty is known as the International Convention for the High Seas Fisheries of the North Pacific Ocean and aims at providing the maximum sustained yield of the fishery resources of the northern Pacific non-territorial waters with each of the parties assuming obligations to encourage conservation measures. The Commission established under this Convention is studying the northern Pacific fisheries and will determine the application of the treaty principles and promote and co-ordinate the scientific studies necessary for ascertaining conservation programs.

The seventh, and latest, international fisheries agreement to which Canada is a signatory is the Great Lakes Fisheries Convention, which provides for joint action by Canada and the United States in Great Lakes fishery research and in a program for the control of the predator lamprey in these waters. This Convention came into force in October 1955. (See also p. 586.)

Canada is a member of the International Whaling Commission and is obligated to collect biological data on whales caught by Canadian vessels. Whaling operations are conducted off the coasts of Newfoundland and British Columbia.

The Fisheries Prices Support Board.—Under the Fisheries Prices Support Act, passed in 1944, this Board was set up in July 1947 to recommend to the Government price-support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry, representative of the various fish-producing regions of Canada.

The Board has authority to buy quality fishery products under prescribed conditions and to dispose of them by sale or otherwise, or to pay to producers the difference between a price prescribed by the Board and the average price the product actually commands. The Board has no power to control prices nor has it any jurisdiction over operations in the fishing industry or the fish trade. Money necessary for dealings in fishery products is available to the Board from the Consolidated Revenue Fund to a maximum amount of \$25,000,000 but only on recommendation of the Federal Treasury Board and authorization of the Governor in Council.

The Board maintains a small staff for administrative activities. The work is closely integrated with that of the Department's Economics Service and, where possible, services required by the Board are carried out by Department personnel. The Board has carried out field surveys on market conditions and possibilities and on factors affecting the income of fishermen in the various producing areas. The financial position of fishermen is kept under continuous review and recommendations are made to the Government on the basis of the findings. Special investigations are made when serious problems arise in particular areas.

THE FISHERIES RESEARCH BOARD*

The Fisheries Research Board of Canada (established 1937) succeeded the Biological Board of Canada (established 1912) which in turn had succeeded the Board of Management of the Biological Stations (established 1898). Through successive names during the past sixty years, fisheries research in Canada has been developed by Boards composed mainly of university professors but tempered by the inclusion of government officials and representatives of the fishing industry. During 1958, the Board was composed of ten scientific members, six industry members and one member from the Department of Fisheries. Members are appointed for five-year terms and serve without pay or other emolument, being reimbursed only for expenses incurred in attending meetings or other Board business. A full-time paid chairman is appointed by the Governor General in Council.

The Board functions as the scientific arm of the Department of Fisheries but has the right of independent action under its Act and administers its own personnel and financial resources under the control of the Minister of Fisheries. The broad operations of the Board are designed to keep check on Canada's fishery resources in the oceans off its coast and in the freshwater areas not under the control of the provinces; to investigate the environment of various populations of fishes with a view to predicting their appearances and following their movements; and to study the causes of fish spoilage and suggest means of control. Much of the biological work of the Board is tied in closely with the work of international commissions concerned with fisheries, of which Canada is a participant. The Board's work on oceanography is closely associated with the needs of the Royal Canadian Navy and other government departments. Much of the technological work provides a basis on which the Department's Inspection Service can build regulations designed to ensure a wholesome supply of fish and fishery products to the consuming public in Canada and elsewhere.

In its biological work the Board operates out of stations situated in St. John's, Nfld., St. Andrews, N.B., Montreal, Que., London, Ont., and Nanaimo, B.C. Substations, field stations and field operations cover much of the inshore and offshore fishing areas of the oceans, including the Arctic, and some of the more productive freshwater areas.

ATLANTIC COAST

Off Canada's eastern shores one of the principal Board researches is on the stocks of groundfishes—those varieties which frequent the bottom areas and of which cod is the most common. These studies are carried out by workers from the stations at St. John's and St. Andrews, using vessels of various sizes from small inshore vessels of ten registered tons to the Board's newest 177-foot offshore research vessel, the *A. T. Cameron*, of about 1,000 registered tons. The work is of particular interest to the International Commission for the Northwest Atlantic Fisheries which is participated in by ten nations in addition to Canada, all of whom have an interest in the fisheries of the Northwest Atlantic and share in the research work or contribute statistics on the catch. The results of research into the effects of exploitation have led to the establishment of regulations for various areas which have been accepted by the nations participating in the Commission. These regulations are designed to assure a continued major supply from each area.

Of historical importance and still of considerable value is the salmon resource of the Atlantic. Through the efforts of a federal-provincial Salmon Co-ordinating Committee, all of the Atlantic Provinces and the Province of Quebec co-operate in a research program with the Board, and in a conservation program with the Conservation and Development Service of the federal Department of Fisheries. The objectives of these programs are to maintain and improve the stocks of salmon using the various river systems that still offer favourable environment for propagation, and to help offset the effects of civilization and industry which change the environment to the detriment of the salmon stocks.

* Prepared by Dr. J. L. Kask, Chairman of the Fisheries Research Board of Canada, Ottawa.

The Board's studies of lobsters provide the basis for regulations on size limits and open seasons to allow as intensive an exploitation of this highly valuable resource as is consistent with maintaining or improving the available stocks. These studies are centred at the Board's Biological Station at St. Andrews, and field work is carried out in all the lobster areas of the Maritime Provinces.

Of importance as bait and of significantly present and potential value as food are the stocks of herring whose appearance and availability in specified areas cannot yet be foretold with any degree of confidence. The exploratory work under a federal-provincial Atlantic Herring Investigation Committee from 1944 to 1950* has been continued by the Board, though with somewhat less intensity. Supplies in the Gulf of St. Lawrence have been found but their exploitation would seem to depend on improved methods of locating commercial schools of these fish and on better means of capture than those now used. The stocks of small herring (sardines) in the Bay of Fundy area seem to appear fairly consistently in adequate numbers to maintain an active canning industry. The possible effect of a proposed tidal-power project in Passamaquoddy Bay is being studied by the Board and its United States counterparts.

When the Board started the study of oysters in Prince Edward Island in 1930 the stocks were at low ebb because of an endemic disease. In co-operation with the Department of Fisheries the Board's workers developed oyster farming methods to produce a disease-resistant strain as a basis for licensed farming. This strain has been used in recent years to restock areas in Nova Scotia and New Brunswick where oyster populations had been practically wiped out by the disease which had been prevalent in Prince Edward Island years before. Other bivalves under study include scallops, clams and quahaugs. The Board co-operates with the Department of National Health and Welfare by keeping close check on areas of production for any signs of incidence of toxicity in shellfish so that these areas can be closed to fishing until healthy conditions return.

Other studies in the Atlantic area include trout production in fertilized lakes, production of smelts, seaweeds and plankton, and various *ad hoc* projects as a service to the Department of Fisheries or the fishing industry.

ARCTIC AREAS

The Board's work in the Arctic areas is concerned mainly with discovering the extent of the aquatic resources there and recommending to the Government developments that may be undertaken by and for the benefit of the native populations in these areas. Since 1948 the Board's specially designed 47-foot Arctic research vessel, *Calanus*, which is fitted for various methods of fishing, has been carrying out exploratory fishing in most of the areas of the Eastern Arctic where there are Eskimo populations. Investigations of the Beaufort Sea and Western Arctic are conducted from smaller vessels. The studies of the aquatic resources include the life histories of walrus, seals and other marine mammals found in the Arctic and in the coastal areas off the Atlantic Provinces. Investigations into the environment of these resources include studies of plankton and hydrography.

FRESHWATER AREAS

The effect of a harmless parasite sometimes found in whitefish imported into the United States gave rise to an intensive study aimed at the eradication or control of this parasite. Investigations of many lakes uncovered infestation-free areas and various degrees of prevalence. Work centred at Heming Lake in Manitoba, a typically infested lake, and a study of the life history of the parasite showed that the pike was the host to the adult parasite and that reduction in the pike population could reduce the incidence of the parasite.

A survey of Great Slave Lake in 1944 and 1945 showed unexploited commercial supplies of lake trout and whitefish. This lake—the fifth largest in North America—was opened up to commercial fishing in 1946 on a controlled quota basis. The annual quota, periodically

* Fisheries Research Board Bulletin No. 111.

raised by the Department, now amounts to 9,000,000 lb. of lake trout and whitefish combined. Continual checks show that no serious decline in the available fish populations has been caused over the years by commercial fishing. Similar studies have been made on Lake Winnipeg since 1948 and show, for comparison, the detrimental effects of uncontrolled fishing on a long-exploited lake.

In the Great Lakes area the Board has been involved mostly with the control, if not the elimination, of the sea lamprey populations. From 1954 to 1956 this work was done under the direction of a federal-provincial Great Lakes Fishery Research Committee and since that time under contract with the Great Lakes Fishery Commission which was set up in 1956 under a Convention between Canada and the United States. The main attacks on the lamprey, which prey on the populations of trout in these lakes, have been in Lake Michigan by the United States and in Lake Superior by the United States and Canada. The battle is being fought by means of electrical and other barriers to the ascent of the adult sea lamprey into streams to spawn and by the use of a specific lampricide on the larval and juvenile forms of this predator.

General biological research on the lamprey of the Great Lakes area is part of the Sea Lamprey Investigation. Work on other species is carried out by agreement and co-operation with the fisheries research workers of the Province of Ontario.

PACIFIC COAST

Of prime importance to the Pacific Coast and an important item in the fisheries economy of Canada is the salmon resource which uses Canadian West Coast streams for propagation. From its station at Nanaimo on Vancouver Island the Board carries out a far-flung program covering studies on the life histories of the five principal species of salmon—from conditions in the streams where they are spawned through their migrations in freshwater and out to sea, their life in the broad reaches of the Pacific Ocean and their return to their native streams to spawn a new generation. For sockeye and pink salmon, the Board's work is done in co-operation with the International Pacific Salmon Fisheries Commission which has jurisdiction for these species in the Fraser River system and in the Convention (with the United States) areas off the mouth of the Fraser River.

The Board is also concerned with a determination of the conditions in the freshwater environment which will allow the best possible use of these areas for the production of fry and of sea-going smolts; recommendations for controls over fishing for incoming spawning fish to allow the escapement to the spawning areas of enough fish to make full use of the areas; and the effects of obstacles to upriver movement of adults and means to guide migrating smolts safely past dams and other water falling towards the sea.

The Pacific Coast herring fishery is also of importance. The Board's studies of this fishery give the basis for prediction and the determination of annual quotas to maintain maximum long-term yield. Much of the work is exploratory and consists of surveying spawning areas to estimate abundance of the resulting year-classes. Tagging of thousands of individual fish and the recovery of these tags in the fishery the following year have confirmed the substantial independence of the various stocks of herring in different areas along the coast.

Studies are also made of the more important species which make up the groundfish fishery, as a basis for regulation to maintain the yield at its optimum long-term level. Studies are also carried out on shellfish, crabs, whales and sea-lions to provide information on which to base recommendations of the best uses of these species.

One of the main purposes for the establishment of the International North Pacific Fisheries Commission (Canada, United States, Japan) in 1951 was to protect the fisheries of one country from unacceptable exploitation by the others. The fisheries were salmon, halibut and herring, each of which was claimed to be under maximum exploitation in relation to the conservation of a continuing resource. The Board has put a great deal of effort into gathering together information to show the status of each of these species in the Canadian fisheries.

Of growing interest are the results of population growth and industrial development in polluting waters used by fish and shellfish. Studies on pollution are aimed at establishing the kinds of controls that will reduce the effects of pollution to negligible proportions.

OCEANOGRAPHY

Under an interdepartmental Joint Committee on Oceanography composed of representatives of the Fisheries Research Board, the Royal Canadian Navy, the Defence Research Board, the National Research Council, the Hydrographic Service of the Department of Mines and Technical Surveys and the Meteorological Service of the Department of Transport, co-ordination has been given to the national effort in oceanography. By agreement with the Committee, the Fisheries Research Board does basic physical and chemical oceanography of interest to all agencies of the Federal Government and carries out programs of special concern to the Navy and the Department of Fisheries.

For its own purposes the Board does biological oceanography along with the physical and chemical studies conducted by its two oceanographic groups, one on each coast. This information is necessary to understand the environment of various fishes and is obtained during exploratory fishing in marine and freshwater areas.

TECHNOLOGICAL INVESTIGATIONS

Research into the composition, preservation, processing and distribution of fish and fishery products is the responsibility of the Board's technological stations situated at Halifax, N.S., Grande Rivière, Que., and Vancouver, B.C.; smaller units doing more applied work are located at St. John's, Nfld., and London, Ont.

The problem of perhaps greatest importance is spoilage. From the time the fish loses its freedom in the water, factors bringing about spoilage start to operate and soon the fish will be unfit for food unless counter measures are taken. Such counter measures and their effectiveness are the subjects of much of the research work in the Board's technological stations. Attacks on this problem involve studies of the effects of antibiotics in varying concentrations and in various forms on slowing down spoilage and of the effects of all other types of preservatives; studies of the use of ice and the use of refrigerated sea water to lower the temperature of the fish almost to freezing as a means of lengthening the 'fresh' life; studies of the protein of the fish to find what changes take place during storage; studies of spoilage bacteria and its growth, an understanding of which might be the basis of a more effective attack on spoilage problems.

The time-honoured methods of preservation by salting, smoking, freezing and canning are given attention as problems arise so that these methods will produce the products needed for the markets that have been developed for them. No method yet devised will hold fish in unchanging condition so that improvements in techniques must be developed from time to time to reduce or control the changes taking place in the products processed for comparatively long-term preservation.

Of economic interest and potentially high value is the Board's work on by-products. The Board's scientists have been working on such projects as breaking down various marine oils into more valuable products, recovering proteins from cuttings and waste in the form of special meals to bolster human and animal diets, producing condensed fish solubles from the stick water pressed out in the production of meals to recover valuable nutritional materials to fortify animal feeds, and studying the make-up of all kinds of waste in an effort to find usable constituents that might be recovered economically enough to add value to the fisheries.

To encourage the application of the results of its work, the Board maintains technical services at each of its technological stations and units. The fish industry makes considerable use of these services when planning new plants or when making changes in or developing new processing techniques. The Board also supplies consultative services to the Department's Industrial Development Service in demonstrations of the commercial application of new or improved methods, processes or procedures.

SCHOLARSHIPS

The Board provides funds for a limited number of scholarships in fields of study of interest to the Board. These funds are administered by the Awards Services of the National Research Council.

Subsection 2.—The Provincial Governments*

An outline of the work undertaken by each of the provincial governments in connection with administration of commercial and game fisheries is given in the following paragraphs.

Newfoundland.—The provincial Department of Fisheries in conjunction with the Newfoundland Fisheries Development Authority, a Crown corporation established in 1953, is concerned mainly with improvement and development of fishing and production methods. It conducts experiments and demonstrations in long-lining, Danish seining and otter trawling, the construction of multi-purpose fishing craft, and in the exploration of potential fishing grounds.

Loans have been made to processors for the establishment and expansion of fish processing plants and for deepsea draggers and also to fishermen for the construction and purchase of modern vessels capable of a greater variety of fishing operations and larger production. Fishermen receive further aid through bounty payments at the rate of \$160 per ton for newly constructed vessels under the Fishing Ships (Bounties) Act of 1955.

In May 1958 the Government of Newfoundland passed the Fishing and Coastal Vessels Rebuilding and Repairs (Bounties) Act, enabling the government to assist financially in maintaining and prolonging the life of the existing fleet.

Other services include the operation of fisheries training schools in navigation and engineering, advisory services to fishermen on gear and equipment, industrial research, plant construction, plant engineering and economics, assistance to fishermen's unions, weather and ice reports, and search and rescue. A Fisheries Salt Act was passed in 1957 to help implement more rigid control over the use of fisheries salt.

The inland waters of Newfoundland, though they provide excellent sport fishing, are not commercially exploited. The lakes and ponds remain under the authority of the Natural Resources Branch of the provincial Department of Mines and Resources, but the rivers and streams—the resort of migratory fish such as salmon and sea trout—are under federal control. Matters of conservation and guardianship are therefore mainly or wholly the concern of the federal Department of Fisheries although, to the extent to which they affect the ponds and lakes, they are subject to provincial or joint action.

Prince Edward Island.—The sea and inland fisheries of Prince Edward Island are administered by the Federal Government. The provincial Department of Fisheries supplements federal activity, which is mainly concerned with inspection and conservation, and

* Prepared by the respective provincial departments responsible for fisheries administration.

devotes special attention to the development of the fisheries industry. The Department provides technical assistance to fishermen and to the industry and, through the Fishermen's Loan Board, gives financial assistance for the purchase of boats and engines. Loans of up to 50 p.c. of the cost of such equipment are available.

The streams of the province, mostly spring-fed and fairly constant in flow, provide very favourable conditions for the reproduction of game fish, of which speckled trout is the most important variety. Investigations toward the problem of increasing the production of trout of a size attractive to anglers are being conducted by the Fisheries Research Board of Canada at sites provided by the provincial Department. The necessary dams and the fish required for experimental purposes are provided by the federal Department. Unfortunately many of the fertile and highly productive ponds of the province have disappeared, and the provincial Department is actively concerned with damming and restoring these for the enjoyment of the public.

Nova Scotia.—In Nova Scotia the Federal Government supplements the province's comprehensive legislative jurisdiction by actual supervision, enforcement and administration of the laws and policies relating to both marine and inland fisheries. The provincial government, however, recognizes that several fields exist in which provincial initiative is necessary and appropriate, having regard for the importance of the fishery resources in terms of employment, industry, trade and recreation.

Provincial interests in the commercial fisheries are the concern of the Fisheries Division of the Department of Trade and Industry. The Fishermen's Loan Board and the Industrial Loan Board are administered within this Department; the first makes loans to fishermen for the purchase of new and improved boats and engines, and the second makes loans for the construction or improvement of fish processing plants. Technical advice and direction is provided for applicants for loans and inspection and survey services to the Loan Boards. The engineering staff gives similar services to others in the fish industry who may not require financial assistance, and to dependent or collateral businesses such as the boat-building industry. A staff of instructors conduct training courses in the care and maintenance of marine engines, in basic navigation, and in the design, construction and maintenance of nets and other fishing gear. This program receives substantial assistance from the Vocational Training Branch of the federal Department of Labour. The actual on-course instruction is supplemented frequently by assistance to individuals or small groups coping with particular problems and by actual demonstration or loans of untried types or designs of fishing gear.

The Fisheries Division administers, in co-operation with the federal Departments of Fisheries and National Health and Welfare, the Nova Scotia Fisheries Act, which requires fish processors and wholesale buyers of fish from fishermen to obtain licences. The purpose of the Act is to improve the standards of sanitation, plant construction and operation in the local fish industry and trade. The Division also performs a variety of liaison services between individuals or local groups and the several departments of the provincial and federal governments to which any problem or proposal may have to be referred.

The province's inland fisheries interests are under the observation of a Director of Conservation in the Department of Lands and Forests. Work in this field is carried on in conjunction with the Nova Scotia Research Foundation which has collaborated with the Fisheries Research Board of Canada in a program of research into the Atlantic salmon populations by providing some scientific personnel and by conducting certain investigations on the La Have and Margaree Rivers. Experiments in the fertilization of lakes have been

undertaken to increase trout productivity and in partial poisoning to reduce the numbers of coarse fish competing with trout for the available food supply. Fundamental investigations into the fish-supporting capacities of lakes are currently active and include studies of the source and regeneration of such nutrients as phosphorous and nitrogen.

New Brunswick.—The commercial fisheries, both tidal and inland, of New Brunswick are under the jurisdiction of the Federal Government and angling is primarily the responsibility of the provincial Department of Lands and Mines. This Department is also responsible for the administration of oyster fisheries in the province although investigations on the oyster fisheries in Gloucester and Northumberland Counties have recently been transferred to the federal Department of Fisheries.

To supplement the activities of the federal Department of Fisheries, the Provincial Government created, in 1946, a Fisheries Branch and a Fishermen's Loan Board within its Department of Industry and Development. Since its inception, the Fishermen's Loan Board of New Brunswick has lent over \$3,500,000 to fishermen for the purpose of modernizing fishing methods. Small loans are made available to inshore fishermen for the purchase of new lobster boats and engines, and larger amounts to offshore fishermen for the building and equipping of modern groundfish draggers and long-liners. During the past decade or so, a fleet of 75 draggers has been built by the Fishermen's Loan Board with the technical assistance of the Fisheries Branch. New designs have been introduced over this period but a pattern of standardization has been followed in order to maintain building and maintenance costs at the lowest possible level. Educational services are made available by the Fisheries Branch to dragger operators during the winter season including a series of lectures on practical navigation, care and maintenance of diesel engines, marine biology, economics, marine insurance and the proper handling of fish aboard fishing vessels. To broaden this school program, plans are under way to create a school of fisheries to be administered jointly by the Vocational Branch of the Department of Education and a regional high school situated in a fishing centre.

In close co-operation with the Industrial Development Service of the federal Department of Fisheries, experimental projects are being undertaken every year by the Fisheries Branch with a view to introducing modern fishing methods and equipment.

To co-ordinate the efforts of the five Atlantic Provinces and the Federal Government in the promotion of the East Coast fisheries, the federal Department of Fisheries recently formed a federal-provincial Atlantic Fisheries Committee of which the Province of New Brunswick is a member.

Quebec.—The Department of Game and Fisheries administers both the sea and the inland fisheries of Quebec. The Department has two divisions—the Division of Maritime Fisheries and the Division of Fish and Game, the latter being charged with the administration of the inland fisheries.

Sea Fisheries.—Quebec is the only province administering its own sea fisheries. For the benefit of producers and fishermen, it provides a system of cold storage plants for the freezing and preservation of fish. Since the erection of the first plant in 1932, the network has grown to 58 plants with a daily freezing capacity of 445 tons of fish and a storage capacity of 20,000,000 lb. These cold storage plants also perform a valuable service to fishermen by providing them with frozen bait and 100 tons of ice per 24 hours. In addition, the Department owns and maintains 115 snow houses (where fish may be chilled before being sent to storage or filleting plants), 40 culling sheds, and two artificial drying plants where 6,000,000 lb. of fish may be processed annually.

The Department maintains a staff of inspectors, fish wardens, technicians and technologists to administer fishery legislation and to assist in the application of new techniques for the expansion of the industry. The central administration is located at Quebec City with an office at Gaspé for the administration of cold storage plants. Fish inspection is carried out under federal and provincial legislation by provincial inspectors who are vested with additional powers for export purposes by the Federal Government.

Educational work among the fishermen and producers is also conducted by the Department to teach the latest methods of fish preparation and of obtaining high-quality products. The new Fisheries Training School at Grande Rivière gives to fishermen of all ages the opportunity of taking free theoretical and practical courses in fishery, and the Superior School of Fisheries at Ste. Anne de la Pocatière conducts a four-year course for technologists. Encouragement is given to the co-operative associations of fishermen through the Social Economic Service of the latter institution. Under a maritime credit system fishermen are able to obtain loans from credit unions for the purchase of boats and gear. The Department adheres to the federal-provincial agreement on the building of dragners and long-liners and assumes the building costs on a five-year capital refunding plan.

The fish trade is being promoted by advertising campaigns in newspapers and magazines, cooking demonstrations, educational films and free distribution of fish recipes and publicity leaflets as well as by exhibits at fairs.

Hydrographical research in the Gulf of St. Lawrence, studies on the location of new fishing grounds, and experiments on seafish biology are conducted by a Marine Biological Station at Grande Rivière and two substations on the North Shore and Magdalen Islands. This research has brought into use new types of fishing vessels recommended to fishermen. The Department also operates a Limnological Laboratory at Quebec City for studying the biology of the freshwater fish of the St. Lawrence River and its tributaries.

Inland Fisheries.—The Division of Fish and Game exercises jurisdiction over the inland waters. Three hundred full-time wardens are employed and licences are required for sport fishing and hunting, the revenue from which is applied to the improvement of fishing and hunting conditions. Five hatcheries are maintained at strategic points throughout the province: St. Faustin, Lachine, Lac Lyster, Tadoussac and Gaspé. These establishments distribute speckled trout, Atlantic salmon and grey trout fry, maskinonge fingerlings and older fish.

The Department administers five parks and eight reserves in all of which, except for Mount Orford Park, excellent fishing may be found. The Gaspesian and Laurentide Parks are renowned for their trout fishing. The Chibougamau Reserve and the La Vérendrye Park, situated on the height of land, are eminently suited to canoe trips in search of pickerel, pike and grey or speckled trout. Five salmon streams, all under the jurisdiction of the Fish and Game Division, are open to anglers: the Romaine River, the St. Jean River, the Petite Cascapédia River, the Matane River and the Port Daniel River. The Department co-operates with sportsmen through a joint committee composed of departmental officials and the directors of the larger fish and game associations. The committee studies the maintenance of satisfactory fishing and hunting conditions and other problems arising out of the ever-changing conditions of modern life and their effect on the wildlife of the province.

The Biological Bureau of the province, located at the University of Montreal, and the piscicultural laboratory at Quebec City, with its two stations for practical work located in the Mont Tremblant and Laurentide Parks, study problems connected with marine life.

Ontario.—The fishery resources of Ontario are administered by the Division of Fish and Wildlife, Department of Lands and Forests. The Division operates under the authority of the federal Fisheries Act, the Special Fishery Regulations for the Province of Ontario, the Ontario Game and Fisheries Act and the Regulations connected therewith.

Commercial Fishing.—The commercial fishing industry in Ontario provides employment for about 3,200 persons directly and for many more indirectly, and produces an annual yield of from 35,000,000 lb. to 45,000,000 lb. of fish. In 1956 an all-time high catch of about 60,000,000 lb. was recorded. The industry, although widely scattered throughout the province, is centred chiefly on the Great Lakes, particularly Lake Erie which is noted for its blue and yellow pickerel, white bass, whitefish and perch. Other principal species of fish taken commercially are lake trout, herring or cisco, sturgeon, pike, catfish (including bullheads), carp and suckers. Over one hundred smaller inland lakes are commercially fished, principally those in the northwestern portion of the province, and careful management of these lakes is essential to ensure continued production.

The types of fishing boats in use vary from small craft to 60-foot tugs, and types of gear vary from the most common gill-nets, pound-nets and trap-nets, seines and baited hooks to small hand-operated seines and dip-nets. Fishing methods and equipment have been rapidly modernized during the past few years. Diesel-driven steel-hull tugs have replaced steam-driven wooden tugs. Such aids as depth sounding devices, radar, ship-to-shore and ship-to-ship communications have been developed and a better knowledge of the fish and their movements has been established from biological research findings. Modern icing facilities and transportation methods are in use as well as new types of fishing gear.

Ontario fishermen are largely organized into various local associations. These associations are, in turn, represented by the Ontario Council of Commercial Fisheries and by the Lake Erie Fisheries Council, who perform an important service to the industry. The Ontario Fishermen's Co-operative and its member groups are of interest also in the organization of the fishery in the province.

Angling.—In Ontario with its estimated freshwater area of 68,490 sq. miles, angling constitutes one of the most widely distributed recreations. There are 144 different kinds of fish in the province including such species as lake, speckled, rainbow and brown trout, yellow pickerel, black bass, pike and maskinonge. It is difficult to measure the value of sport fishing to the province but the annual revenue from the sale of angling licences alone (mainly to non-residents, as residents require a licence for Provincial Parks only) is in the neighbourhood of \$2,500,000. To maintain Ontario's reputation for excellent game fishing the wise management of this renewable resource is a prime factor, and a well-trained field staff of conservation officers and biologists is located in the 22 forestry districts of the province.

Provincial Hatcheries.—Ontario operates 21 hatcheries and rearing stations and excellent results have been produced in the culture and distribution of the various species of commercial and game fish. Millions of fry, fingerlings and yearlings comprising whitefish, herring, pickerel, trout (lake, speckled, brown and Kamloops), maskinonge, bass and ouananiche are distributed annually. Three of the finest trout-rearing stations on this Continent are located in Ontario at Dorion near Port Arthur, at Sault Ste. Marie, and at Hill Lake near Englehart.

Fisheries Research.—Research in Ontario is carried on in the Great Lakes where commercial fisheries problems are being investigated and in inland waters where game fish populations are being studied. At the South Bay Mouth Station, Manitoulin Island,

Wheatley on Lake Erie, and Glenora on the Bay of Quinte on Lake Ontario, fishery biological stations are operated for the investigation and study of the commercial and sports fisheries on the respective Great Lakes. In Algonquin Park a careful record of angling quality is kept for a number of test lakes to allow evaluation of management techniques. Certain of the more barren lakes are being treated with fertilizer to determine the effects of microscopic organisms and fish.

The habits of lake trout and eastern brook or speckled trout are being studied to provide additional information on the proper management of these species. Many authorities believe the increase in the sea lamprey and the drastic drop in production of lake trout in recent years in Lake Huron (including Georgian Bay, North Channel and Lake Superior) to be directly related and this has led to an International Agreement between Canada and the United States and the establishment of the Great Lakes Fisheries Research Commission for the co-ordination and direction of the fisheries research program, particularly as it is applied to the control of the sea lamprey menace. Co-operation is maintained by the exchange of biological findings and, where practicable and feasible, the results are applied in an attempt to control this menace. (*See also p. 586.*)

Established fish-management principles are applied by biologists in the various forestry districts. The program includes such projects as biological surveys and investigations, bass harvesting, coarse fish removal, creel census studies, fish tagging and other related subjects.

Manitoba.—For the year ended Mar. 31, 1957, the freshwater commercial fisheries of Manitoba, made possible by nearly 39,255 sq. miles of lakes and streams in the province, yielded a catch of 30,395,800 lb. of choice edible fish, the market value of which was \$5,390,267. Fifteen varieties of fish make up the commercial catch, the most important, according to value, being pickerel, whitefish, sauger, pike and tullibee. In addition to commercial production, sport fishing yielded a considerable poundage.

The fisheries of Manitoba provide a rich harvest of protein food, about 90 p.c. of which is sold to United States dealers. Actual fishing operations employ about 5,400 men and at least a similar number find total or partial employment in the many industries dependent wholly or in part on the fisheries.

Since the commercial fishing industry began in Manitoba about 75 years ago, equipment has improved and methods of handling fish have changed to meet modern demands for a packaged product ready to serve or convenient to cook. Oars and sail have given way to high-powered internal combustion engines and boats that can lift nets in almost any weather. Coarse linen gill-nets have also disappeared in favour of the finest of nylon gill-netting. In marketing, whole fish packed in ice is being replaced, in part at least, with a packaged filleted product, or pre-cooked items. Throughout the fishing industry there is a keen appreciation of the necessity of producing a first-quality product, convenient to prepare, attractively packaged, and appealing to the eye, palate and the cook. The city of Winnipeg has become one of the largest freshwater fish marketing centres on the Continent and the provincial Department of Mines and Natural Resources maintains a city patrol service to ensure, as far as is possible, that only fish of first quality is marketed or offered to the consumer. This patrol operates in co-operation with officials of the federal Department of Fisheries. To regulate the fishery operation and to ensure that seasons and limits are observed, the Fisheries Branch of the provincial Department operates a fleet of patrol boats in summer and a number of snowmobiles in winter.

Three fish hatcheries are engaged in the artificial propagation of pickerel and whitefish on commercial fishing lakes and a trout hatchery provides a supply of lake, rainbow and speckled trout for sport fishing waters at the northern extremity of West Hawk Lake in Whiteshell Provincial Park.

Saskatchewan.—Approximately 32,000 sq. miles of water area provide the basis for the fishery industry of Saskatchewan. Whereas the commercial industry is concentrated in the northern half of the province, the water bodies in the south are important to the tremendous recreational development now taking place. The Fisheries Branch of the Department of Natural Resources, with head office at Prince Albert, is responsible for the administration of this resource.

The commercial fishing industry in 1957-58 enjoyed one of its most productive years with approximately 11,000,000 lb. taken from 132 lakes. The principal species were whitefish, lake trout, pickerel, sturgeon and cisco. The 11 filleting plants, one of which is owned by a fishermen's co-operative, have done much to stabilize the commercial fishing industry by preparing for market a high-quality, ready-to-cook product.

During the year there were 94 licences issued to owners of fur farms who used about 5,500,000 lb. of coarse fish (cisco, burbot, mullet). Also 935 domestic fishing licences were issued and 1,911 free Indian permits. The recreational value of the fisheries has been increasing significantly. In 1958 the total number of angling licences sold was 107,322, of which 100,000 were purchased by Saskatchewan residents.

The expansion of commercial and recreational fishing emphasizes the importance of the research program started ten years ago, which was planned to cover the needs of the management of this resource for both fundamental and applied information. Its three phases include (1) research projects—consisting of the basic productivity of larger lakes and streams and the ecological characteristics of the main species of fish; (2) experimental projects—establishment of rainbow trout and largemouth bass in various southern reservoirs; and (3) management procedures—creel census studies and pollution investigations.

New quarters have been provided recently for the Fisheries Laboratory in the Saskatchewan Research Council Building at the University of Saskatchewan. There are five permanent biologists on staff and usually 12 university students are employed each summer on biological surveys. A new fish cultural station has been completed at Fort Qu'Appelle for the hatching of pickerel, rainbow, brown and lake trout and rearing facilities are being built for various types of game trout. An experimental hatchery is operated at Lac la Ronge where Arctic grayling and lake trout eggs have been hatched. Spawn camps are operated for the taking of pickerel eggs at Lac la Ronge and Arctic grayling eggs at Black Lake, located east of Lake Athabasca. Efforts are being continued to extend the range of the Arctic grayling species from the Far North into the Churchill River area and particular success was noted in the establishment of Arctic grayling in a water body west of North Battleford which is located below the 53rd parallel. Rainbow trout have been successfully established in a number of smaller reservoirs in the southern part of the province.

The Fisheries Branch maintains a program of dissemination of information to the public on the various fisheries management programs and policies.

Alberta.—Commercial and game fishing are administered by the Fish and Game Branch of the Department of Lands and Forests under the authority of the Fisheries Act (Canada) and the Fishery Act (Alberta).

Regulations under the Fishery Act (Alberta), designed to improve the packing, handling, processing, storage and quality of commercial fish, have been well received and supported by the Alberta industry. In line with a policy for producing good-quality fish, lakes in which whitefish are infected with pike-tapeworm and do not meet the quality standard have been closed to commercial fishing.

About 80 p.c. of the whitefish production is exported to the United States. Mink farmers of the province utilize almost the entire catch of tullibee.

Biological surveys of many lakes and watersheds have provided an opportunity to observe the result of former management policies. These surveys have shown that traditional practices of trout-stream management were inadequate or incorrect. As a consequence, the minimum size limit has been removed on all trout except lake trout and close seasons for trout, pike, walleye and perch have been abolished. A new management plan on the east-slope streams of the Rocky Mountains has been extended to include all the forested area. The main streams are continuously open; the smaller streams are opened and closed in alternate years. The trout-rearing facilities are used mainly to produce fish for planting in small lakes and reservoirs previously barren of fish. It has been found that such waters produce very fast-growing trout with a satisfactory history of survival.

British Columbia.—A Fisheries Office, which was organized in 1901-02 and became very active in fish cultural work, building and operating fish hatcheries and instituting scientific research into various fishery problems, was superseded in 1947 by the Department of Fisheries which in turn was superseded in 1957 by the Department of Recreation and Conservation. Commercial fisheries is represented today as the Commercial Fisheries Branch of the Department of Recreation and Conservation. Broadly speaking the administrative and regulative jurisdiction over the fisheries of British Columbia rests with the federal authority. The ownership of the fisheries in the non-tidal waters is vested in the Crown in the right of the province, as are the shell fisheries such as oyster fishing and clam fishing in the tidal waters. The province administers these fisheries although the regulations covering them are made under federal Order in Council on the advice and recommendation of the province.

The Provincial Fisheries Act provides for the taxation of the fisheries and, under civil and property rights, for the regulation and control of the various fish processing plants under a system of licensing. Provision is also made for arbitration of disputes regarding fish prices that may arise between the fishermen and operators of the various licensed plants. The administration of the Act involves the collection of revenue and the supervision of plant operations.

Net fishing in the non-tidal waters of the province, including commercial fishing, is regulated and administered by the Commercial Fisheries Branch, Department of Recreation and Conservation, and authority for regulation of the game fisheries in non-tidal waters is vested in the Fish and Game Branch which operates a number of trout hatcheries and egg-taking stations for restocking purposes.

The harvesting of marine plants of commercial importance in British Columbia, including the kelps, has recently been placed under the provincial Department of Recreation and Conservation for regulation and control. Some research has been done on a few of the important species. A marine laboratory at Ladysmith on Vancouver Island is operated by the Department for the purpose of conducting biological research into those species over which the province has control, principally oysters, clams and other forms of shellfish as well as marine plants. The object of this research is to encourage the industry to produce better products more economically and to enable the Commercial Fisheries Branch to regulate the various species so that maximum exploitation may be obtained on a sustained-yield basis. The Branch co-operates closely with the research work done by the Fisheries Research Board of Canada, particularly on the Pacific Coast.

Section 3.—Fishery Statistics

Subsection 1.—Primary Production

Since 1949, when Newfoundland became a province of Canada, fish landings for the country have hovered around 2,000,000,000 lb. annually and the gross income from fishing has been in the vicinity of \$100,000,000. In 1956 the catch of fish and its value were at record levels: landings increased to 2,234,354,000 lb. from 1,942,073,000 lb. in 1955 and the value landed reached the unprecedented figure of \$105,835,000 compared with \$91,392,000 for the preceding year. The average for the five years 1951-55 was 1,954,620,000 lb. and the average landed value for the same period was \$94,700,000. Both sea and freshwater results were most gratifying and substantial gains were reported for all areas except the Prairie Provinces.

In British Columbia the 1956 catch reached the unprecedented figure of 677,225,000 lb. valued at \$36,058,000 compared with 498,376,000 lb. and \$27,711,000 in 1955; the catch of herring was 491,396,000 lb. with a landed value of \$7,077,000, both figures being an all-time high; and halibut increased to 23,315,000 lb. from 19,679,000 lb. in 1955 with a value of \$5,067,000, almost double the \$2,555,000 of the previous year. On the other hand, it was an off-year in the cycle for pink and sockeye salmon and for a second consecutive year the catch of chum fishery was very disappointing. The total salmon catch in 1956 was the lowest since 1944 but was sold by fishermen at very favourable prices, resulting in a landed value of \$21,356,000 which was 16 p.c. higher than the 1955 value. Salmon, halibut and most of the British Columbia fish brought very high prices in 1956.

The yield on the Atlantic Coast was also very satisfactory in 1956. The catch of sea fish rose to 1,432,533,000 lb. from 1,324,738,000 lb. in 1955 and was the highest since 1949. Gross income from fishing (or landed value) at \$55,889,000 was also the highest since 1949 as a result of satisfactory prices being paid for raw fish. Groundfish and lobster fisheries—both being major operations on the East Coast—were active during the year. Modernization of the fishing fleet along the Atlantic seaboard, accomplished with the assistance of the federal and provincial governments, has been largely responsible for the prosperity of the groundfish fishery during the past decade. In 1956, the groundfish catch of 1,027,972,000 lb. had a value to fishermen of \$27,461,000. Most significant increases over the previous year were shown by the cod, haddock and rosefish fisheries. The lobster catch for the year was 51,960,000 lb. valued at \$18,023,000.

The inland waters yielded a bumper catch of 124,596,000 lb. in 1956 valued to fishermen at \$13,892,000, an all-time high. About two-thirds of the catch comes from Ontario and Manitoba, and Ontario accounted for most of the increase in 1956. During the year the catch of perch, mainly from Lake Erie, was 12,799,000 lb. compared with 6,765,000 lb. in 1955 and the landings of yellow pickerel in Ontario were also heavy, more than offsetting declines in other areas. Alberta fisheries and those of the Great Slave Lake in the North-west Territories also showed increased catches as compared with the previous year.

Preliminary figures for 1957 show that fishing operations were not as successful as in 1956; the sea fish catch and its value fell by 14 p.c. to 1,816,315,000 lb. and \$79,127,000. The decline was more pronounced in British Columbia than on the Atlantic Coast. On the West Coast the catch fell by 29 p.c. to 482,286,000 lb. and the value by 20 p.c. to \$28,787,000. Heavy stocks of frozen halibut and salmon at the beginning of the 1957 season had an adverse effect on prices. The herring catch was also drastically reduced mainly because no price agreement was made between fishermen and processors during the winter of 1957-58. The catch of salmon was up compared with 1956, but the increase was accounted for by the pink species which is a low-priced variety. On the Atlantic Coast the catch declined by 7 p.c. to 1,334,029 lb. and the value landed by 10 p.c. to \$50,340,000. Severe ice conditions off the Coast and in the Gulf of St. Lawrence hampered fishing operations in the first part of the year. The groundfish catch—mainly that of cod, haddock,

MARKET VALUE OF FISH PRODUCTS, 1955 AND 1956 (SELECTED SPECIES)

hake and rosefish—was substantially reduced, compared with the preceding year, and the lobster crop was mediocre. Information available on the freshwater fisheries in 1957 indicates a slight decline from the previous year's level.

¹ Estimate.**Subsection 2.—The Fish Processing Industry**

The Census of Industry survey of the fish processing industry covers establishments engaged in the processing of fish at the secondary industrial level. Some fishermen also process the fish they land to a certain degree but their operations are not included nor are the minor amounts of processing done in the inland areas (Ontario, the Prairie Provinces, and the Northwest Territories). In 1956, products of fish processing establishments had a selling value of \$170,063,000; the East Coast fish plants contributed \$88,450,000 and those of British Columbia \$81,612,700.

¹ Excluding establishments whose main activity was the handling of fresh fish or other products, such establishments being included for previous years. ² Not strictly comparable with previous years; this figure applies to sales or shipments, while the value of production is given for previous years.

The most important products of the fish processing industry are canned salmon for British Columbia and frozen fillets of groundfish for the Atlantic Coast. Because of small landings of salmon in 1956, the pack of the canned product was the lowest since the year 1944. It fell by 21 p.c. to 1,115,181 cases from 1,410,795 in the preceding year. Its value, at \$31,852,000, represented about 40 p.c. of the value of the British Columbia products reported through the Census of Industry and was 2.5 p.c. less than in the preceding year. A smaller decline in value than in quantity was caused by firmer prices than in the

preceding year as well as by a greater contribution of the more expensive varieties in 1956. Other important products of the processing industry in British Columbia include frozen halibut, herring meal and oil, and frozen salmon.

The frozen groundfish fillet production on the East Coast (packaged fillets and blocks) was 133,491,000 lb. in 1956 as against 121,397,000 lb. in 1955. This production has increased almost constantly from year to year in the past decade, the major factor in the growth during the past few years being the production of fish blocks. Frozen groundfish fillets produced on the East Coast were valued at \$25,526,000 in 1956, which made up about 30 p.c. of the total value for the fish processing industry in the area. Dried salted fish, pickled fish, canned sardines and lobster products are also important products of the Atlantic Coast.

¹ Value based on average export prices for the years 1952 to 1954.

The value of all fishery products processed or handled in Canada by processors, handlers or fishermen during 1956 reached \$198,253,000 for the sea and inland fisheries, 7.6 p.c. higher than the 1955 level of \$184,166,000; East Coast sea fish products rose to \$109,971,000 from \$105,498,000, the British Columbia value of fishery products to \$67,726,000 from \$60,031,000 and the inland fish value to \$20,557,000 from \$18,637,000.

PART II.—FURS

Section 1.—Review of the Fur Industry*

The beaver, symbol of industry and engineering skill, has well earned his place on the Canadian coat of arms. A few years after the discovery of the North American Continent, beaver fur became a major product in the economy of the New World. Europeans recognized the value of beaver pelts for warmth and in the production of felt. North American Indians recognized the value of metal implements in their economy. Under the dual stimuli, intensive hunting developed which soon depleted the resources of the coastal areas and traders moved up the St. Lawrence River to find new sources of supply. With increasing demand for furs from European markets, competition became very keen and frequently led to violence between rival nations. Continued competition in later years between the Northwest Company and the Hudson's Bay Company resulted in a further westward surge of exploration culminating in Sir Alexander Mackenzie's epic journeys to the Arctic and Pacific Oceans. Unfortunately, exploration gave way to exploitation. By the beginning of the twentieth century many fur species were faced with extinction and their declining numbers brought hardship to the trader and even greater hardship to the native peoples who had become dependent on the white man for the necessities of life.

However, about that time, major changes began to take place in the techniques of fur production. Fur farming, particularly of fox and mink, made its appearance. Mink ranching, coinciding with the present popularity of short-haired furs, has provided a large part of the revenue of the fur industry in recent years. Of greater importance has been

* Prepared by the Canadian Wildlife Service, Department of Northern Affairs and National Resources, Ottawa.

the realization that fur-bearing animals are a renewable resource and that proper management can provide much greater returns. Legislation has therefore been passed by provincial governments and by the Federal Government sharply limiting the trapping pressure in the areas under their respective control. The establishment of National Parks and Game Sanctuaries has provided areas where animals may increase unmolested and repopulate formerly depleted areas. Intensive forest fire control and forest management have assured a continuous habitat suited to mammal needs.

One of the major management techniques developed has been the introduction of registered trapping areas. Under this plan, each trapper has some opportunity of managing his own area to provide the greatest possible return while sustaining the yield. With the guidance of conservation education the trapper is taking his place as an intelligent partner in the maintenance and expansion of the fur industry.

Unfortunately, the possible benefit from the increase in potential fur production brought about by fur farming and intelligent harvesting methods has been largely nullified by declining prices. The decline in popularity of fur as an article of clothing has been particularly noticeable since the end of the War and low prices have brought considerable hardship to those people, particularly northern residents, who depend on the fur crop as a major source of income. In the light of this situation, the Federal Government has arranged a series of international exhibitions designed to stimulate the market for Canadian fur. Research to determine actual numbers and status of fur-bearers is being carried on by the provincial governments in the provinces and by the Canadian Wildlife Service in the Yukon and Northwest Territories, with the objective of improving management practices and maintaining closer control of fur harvests.

The relative value of the fur industry in Canada's economy has, of course, lowered continuously throughout the years, but the dollar value of the annual fur production has remained fairly constant.

Section 2.—Provincial and Territorial Fur Resources and Management

Most of the fur resources of the provinces of Canada are under the administration of the respective provincial governments. Exceptions include those resources within the boundaries of the National Parks and the Indian reserves, and the fur resources of the Yukon Territory and Northwest Territories all of which are under the administration of the Federal Government. The Canadian Wildlife Service of the Department of Northern Affairs and National Resources (*see pp. 22-23*) is responsible for all Federal Government interests in wildlife resources except for those activities closely related to Indian affairs. The service co-operates with provincial governments and other agencies concerned and handles federal interests in relevant national and international problems.

Detailed descriptions of provincial and territorial fur resources and management activities are given in the 1957-58 Year Book, pp. 616-622.

Section 3.—Fur Farming

Fur-bearing animals were first raised in Canada on farms in Prince Edward Island about 1887 and in Quebec in 1898; today fur farming is carried on in all the provinces. Foxes were the first fur-bearers to be raised in captivity on a commercial scale and for a time were of prime importance in the fur farming industry but in 1951 mink accounted for 92 p.c. of the total fur-bearing animals on farms and chinchilla for 7 p.c. Small numbers of raccoon, marten, fisher, fitch, nutria and others are also reared.

There was a slow and steady increase in the number of fur farms until 1920 when 587 were reported, followed by a period of more rapid growth from 1920 to 1938 when the number reached 10,454 with a production value of \$6,500,000. In 1939, when the London and other European markets were lost to the fur industry, prices declined and many fur farms went out of production. Though prices rose considerably after the Second World War, operating costs increased and the number of fur farms, particularly those conducted

in conjunction with other farming operations, continued to decrease. By 1956 only 2,829 farms reported but the value of production had reached \$16,542,000.

Statistics of fur farms are given in the following Section, pp. 606-608.

Section 4.—Statistics of Fur Production*

Total Fur Production Statistics.—Early records of raw fur production were confined to the decennial censuses when account was taken of the number and value of pelts obtained by trappers. In 1920 the Dominion Bureau of Statistics commenced an annual survey of raw fur production. For a number of years the statistics were based on information supplied by the licensed fur trappers. More recently annual statements based on royalties, export tax, etc., have been made available by the provincial game departments (except Prince Edward Island), and these statements are used in the preparation of the statistics issued annually by the Bureau. Figures for Prince Edward Island are based on returns supplied to the Dominion Bureau of Statistics by fur dealers in that province.

Average prices for pelts were generally lower in 1956-57 than in 1955-56. Of the nine kinds having the highest value of production, mink pelts including standard and mutation dropped from \$20.19 to \$14.78, beaver from \$12.10 to \$11.64, muskrat from \$0.95 to \$0.89, squirrel from \$0.46 to \$0.45, ermine from \$1.35 to \$1.17, otter from \$26.71 to \$26.54, fisher from \$22.04 to \$19.20 and marten from \$7.87 to \$6.05. White fox pelts increased from \$13.14 to \$16.28.

² Included with silver fox.

Fur Farm Statistics.—There were 2,829 fur farms operating in Canada in 1956 in comparison with 2,706 in the previous year. The increase was accounted for by the operation of a larger number of chinchilla farms.

The number of mink on farms increased from 402,453 valued at \$11,880,147 in 1955 to 416,098 valued at \$10,000,621 in 1956. Fox pelt production decreased from 7,238 valued at \$66,070 in 1955 to 4,059 valued at \$29,636 in 1956. Mink pelts produced numbered 786,760 valued at \$15,787,520 compared with 1,002,188 valued at \$15,413,231 in 1956.

Section 5.—Marketing of Furs

Montreal, Que., is the leading Canadian fur mart although auction sales are also held at Vancouver, B.C., Edmonton, Alta., Regina, Sask., and Winnipeg, Man. The Saskatchewan Government maintains a Fur Marketing Service at Regina to assist producers in that province.

Grading.—The grading of furs to secure uniformity was introduced in 1939 by the federal Department of Agriculture so that furs may be purchased by grade without the necessity of buyers from other countries personally examining the pelts. Grading offers many advantages to the producer as well as to the trade in general. It educates the rancher as to the proper value of his pelts and creates an incentive to improve the quality of the product; it furnishes guidance in the planning of future matings, aids in raising the standard of quality of the entire crop of pelts and helps in advancing the level of prices for high-quality pelts.

Exports and Imports.—Before World War II, Canada marketed fur pelts mainly in the United Kingdom but that market was practically dormant during the war years and the fur trade was carried on chiefly with the United States. A revival of trade with the United Kingdom took place after the War but almost 80 p.c. of Canadian fur exports still go to the United States.

The Canadian fur trade, both export and import, is mostly in undressed furs, the value of dressed and manufactured furs going out of or coming into Canada being a comparatively small proportion of the total. Canadian fur exports consist largely of those produced in greatest abundance, mink being the most valuable followed by beaver, muskrat and squirrel. Furs such as Persian lamb, mink, certain types of muskrat, raccoon, sheep and lamb and Kolinsky make up the major portion of the imports.

Exports and imports of all furs to and from the United States, the United Kingdom and all countries are given for the years 1956 and 1957 in Table 7.

Section 6.—The Fur Processing Industry*

The rather general term 'fur processing' includes the fur dressing and dyeing industry and the fur goods industry. The former is concerned with the dressing or dyeing of pelts on a custom basis and the latter is a manufacturing industry that makes up fur goods such as coats, scarves and gloves.

Fur dressing and dyeing industry statistics were first recorded in 1917 when 12 establishments with 511 employees reported receipts of \$1,071,805. Eight establishments in 1924 reported revenues of \$1,120,895, expenditures of \$162,013 on dyes, chemicals and other materials used, and expenditures of \$561,233 on salaries and wages to 539 employees. Of the 3,473,909 skins treated in that year, muskrat pelts made up 47 p.c., rabbit 19 p.c. and squirrel 10 p.c.

The greatest number of skins treated was reported in 1941 when 14,592,079 were handled, but almost 53 p.c. of those were rabbit skins so that the revenue for that year was only \$2,476,289. The record revenue reported was that for 1949 when \$6,691,418 was received and rabbit skins constituted 38 p.c. of the total processed.

In 1957 the number of skins treated was 8,960,044 of which muskrat comprised 48 p.c., Persian and other types of lamb 13 p.c., mink 14 p.c., squirrel 6 p.c. and rabbit 5 p.c.

* Prepared in the Industry and Merchandising Division, Dominion Bureau of Statistics.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

This Chapter deals with manufacturing in Canada in three Parts. Part I reviews the manufacturing situation at the end of 1957, emphasizing particularly the fifteen leading industries. Also included is a commentary on the changing pattern of growth in manufacturing which became evident as a result of the recession that began in 1957. Part II provides general statistical analyses including manufacturing statistics from 1917; detailed treatment of 1956 production under various groupings and individual industries; and principal factors in manufacturing production such as capital expenditures and size of establishment. Part III deals with the provincial and local distribution of manufacturing production.

PART I.—REVIEW OF MANUFACTURING

Canada ranks about sixth among the industrial nations of the world. Manufacturing in 1957 contributed 28 p.c. to the gross domestic product at factor cost, which was almost as great a proportion as manufacturing holds in the United States, and about 26 p.c. of the employed population in Canada were working in manufacturing.

Basic historical developments, such as the opening of the West and the magnitude of requirements of all kinds for World Wars I and II, have been followed by recent events of far-reaching significance—the discovery of the major oil pool on the prairies in 1947, the discovery of large-scale deposits of iron and the successful search for uranium have given new dimensions to Canadian thinking and business planning. These factors explain the records of capital expenditures year by year in the postwar period. Yet it is not only rate of growth that is significant. There have been other periods when Canada's population has grown more rapidly and, in many respects, the rate of industrial expansion in the late 1920's was relatively as great as in the postwar years. But the real significance of the latter period is that never before has there been an advance on such a broad industrial front.

Canada's position as a trader is based largely on the country's natural resources, and is reflected in the industrial structure. Three industries stand out as major exporters—the pulp and paper mills, the non-ferrous smelting and refining plants, and the sawmills—all of them closely concerned with the processing of Canada's natural resources. The aluminum plants forming part of the smelting and refining industry are an exception since they process imported raw materials, but the reason for their location in Canada is the abundant supply of another natural resource—water power.

Slaughtering and meat packing and the butter and cheese industry, two other resource-based industries appearing among the leading fifteen in value of shipments, were once important exporters but are now occupied in supplying the home market because demand for their products from a larger and more wealthy population has increased faster than production. The bakeries and the manufacturers of miscellaneous food preparations are also turning out much greater quantities of food for the growing population. However, growth of population is only one way in which Canada is providing a domestic market for more and more industrial produce. The range of industries supplying domestic needs has greatly extended and at the same time the major export industries are finding a greater market for their products in Canada. Growth stimulates growth. Canada's mines, forest industries, transport systems and service trades expand, and that expansion requires building materials, machinery and equipment. Every new factory provides an increased market for capital goods and for raw materials or semi-finished products. Thus a growing market for existing products calls for increased output and a demand for new products springs up, which is met by imports until the market is able to support domestic production.

Despite a downturn in production in the autumn of the year, the manufacturing industries of Canada in 1957 established new highs in number of employees, salaries and wages paid and selling value of factory shipments. Shipments at \$22,183,594,311 were the highest on record and exceeded by 2.5 p.c. the high mark attained the previous year. The employment picture was not so impressive. Although there was an increase of 0.4 p.c. in persons employed in 1957 as compared with 1956, the number still was only 31,610 higher than the record employed in 1953. Salaries and wages paid at \$4,819,627,999 and value added by manufacture at \$9,822,084,726 exceeded the previous highs of 1956 by substantial margins. On the other hand, the physical output of manufactured products declined by 1.8 p.c. despite the small increase in number of employees; a drop of about 2 p.c. in the average number of hours worked per week in 1957 contributed to this result. The decrease in the volume of production, which contrasted with the increase in selling value of factory shipments was more or less accounted for by an increase in the wholesale prices of partly and fully manufactured goods. The output of non-durable goods recorded a minor increase of 0.9 p.c. but the production of durable goods was down by 4.6 p.c., resulting in a net decline of 1.8 p.c. for manufacturing as a whole. The total index for manufacturing in 1957 stood at 142.5; for non-durable goods it was 139.3 and for durable goods 146.2. Since the end of the War, both durable and non-durable goods experienced almost uninterrupted expansion in volume of production, the only exceptions being 1954 and 1957 for the former and 1954 for the latter. However, the durable goods sector increased by 92 p.c. between 1946 and 1956 while the non-durables advanced only 54 p.c. during the same period.

The high level at which the manufacturing industries of Canada operated during 1957 was the result of two main factors. First was the continued high spending on capital goods, such as construction and machinery and equipment of all kinds, which rose 8 p.c. from \$8,036,000,000 in 1956 to \$8,717,000,000 in 1957; construction was up by \$511,000,000 and expenditures for machinery and equipment by \$170,000,000. This high expenditure had the effect of stimulating certain durable goods industries to a marked degree. The volume of output of the hydraulic cement industry advanced 20.6 p.c., output of cement rising from 5,021,683 tons in 1956 to 6,049,098 tons in 1957. Bridge-building and structural steel was 15.8 p.c. higher, and heavy electrical machinery as well as industrial machinery and machine tools recorded minor gains. The output of the primary iron and steel industry dropped 5.9 p.c.; production of pig iron at 3,718,350 tons was 150,147 tons higher but

steel ingots and castings at 5,068,149 tons were 233,053 tons lower. The second factor was the impact on the consumer goods industries of the increase of about 543,000 in population and of the continued rise in labour income.

Lower export demand for Canadian manufactured products adversely affected manufacturing operations in 1957. The sharp decline in the export of planks and boards, shingles, veneer and plywood which occurred in 1956 continued throughout 1957. Exports of wood pulp, newsprint, whisky, wheat flour, aluminum and products, copper and products, zinc, automobiles and parts, fertilizers, and aircraft were all lower but there were increases in exports of farm implements and machinery, nickel, artificial crude abrasives, non-farm machinery and synthetic plastics and their manufactures.

The minor recession that commenced in the autumn of 1957 continued into 1958. Based on monthly returns by manufacturers, it is estimated that 1958 shipments were 2.0 p.c. lower at \$21,619,000,000, employment was 5.0 p.c. lower at 1,288,000 and salaries and wages paid were down 1.5 p.c. at \$4,752,000,000. The index of physical volume of production also declined, being 3.6 p.c. lower for manufacturing as a whole; the output of durable goods dropped 6.9 p.c. and non-durable goods 0.6 p.c.

Fifteen industries were responsible for 46 p.c. of the total shipments by manufacturers in 1957. Six of these were primarily engaged in meeting the requirements of the domestic consumer for goods required for current use—the four food-producing industries already mentioned, together with the petroleum products and rubber goods industries which are ancillary to the durable goods industries producing transportation equipment. The three major exporting industries have also been mentioned, and the remaining six of the fifteen leading industries are mainly occupied in meeting the requirements of Canadian industry for capital goods or materials, and the requirements of Canadian consumers for durable goods. The following were the fifteen leading industries in 1957 on the basis of value of factory shipments; the rank of each is shown in parentheses.

<i>Group and Industry</i>	<i>Rank</i>	<i>Shipments</i> \$'000,000
EXPORTING INDUSTRIES—		
Pulp and paper.....	(1)	1,411.9
Non-ferrous metal smelting and refining.....	(3)	1,280.1
Sawmills.....	(7)	555.7
CONSUMER GOODS INDUSTRIES—

Slaughtering and meat packing.....	(5)	907.1
Butter and cheese.....	(8)	469.9
Miscellaneous food preparations.....	(13)	336.3
Bread and other bakery products.....	(14)	331.1
Rubber goods, including footwear.....	(15)	326.1
CAPITAL GOODS INDUSTRIES—		
Motor vehicles.....	(4)	948.6
Primary iron and steel.....	(6)	704.6
Aircraft and parts.....	(9)	424.4
Railway rolling-stock.....	(10)	386.7
Miscellaneous electrical apparatus and supplies.....	(11)	381.1
Industrial machinery.....	(12)	363.0

The production of pulp and paper continues to be Canada's leading manufacturing industry, the selling value of factory shipments in 1957 totalling \$1,411,934,462. The pulp and paper mills are fed by the great coniferous forests, through which run extensive river systems. The rivers provide a means of transporting pulpwood to the mills and provide the power for generating the required electricity. The importance of cheap power to this industry is emphasized by the fact that, in 1957, it used about 30 p.c. of all the electricity utilized by Canadian manufacturers.

On the market side, there has been a great increase in the consumption of paper throughout the world, especially in North America. Increased education has advanced the sales of newspapers, books and other printed matter, and new uses are continually being found for paper—for building materials, packaging materials, insulation for electrical equipment, and for many other purposes. In 1957, 75 p.c. of the industry's shipments

consisted of paper—\$1,056,371,332 out of a total of \$1,411,934,462. Exports of paper and paper goods were valued at \$751,153,000 and exports of wood pulp at \$292,406,000. These exports, totalling \$1,043,559,000 accounted for 74 p.c. of production. The industry produced 10,425,000 tons of wood pulp in 1957, of which 2,283,000 tons were exported. The remainder, together with about 472,000 tons of other materials (mainly waste paper), was turned into about 8,300,000 tons of paper, including 6,362,000 tons of newsprint and 1,115,000 tons of paperboard; 5,900,000 tons of the newsprint were exported.

The petroleum products industry was the second largest of Canada's manufacturing industries, recording sales amounting to \$1,377,000,000 in 1957. The industry used about 8,335,000,000 gal. of crude oil in 1957, of which 53.5 p.c. was from Canadian wells. The refineries of Quebec and the Maritimes continued to operate on imported oil because of distance from Canada's western oil fields but the recent construction of pipelines has resulted in heavy consumption of Canadian crude by Ontario refineries. The growth of this industry in the past decade, advancing from ninth place in 1947 to second in 1957, has followed the discovery and development of the large oil resources of the Prairie Provinces, contributing to and benefiting from the rapid industrialization of Canada.

The last special study made of the net use of energy in Canada was completed in 1953. It showed an increase from about 1,088,000,000,000 B.t.u. in 1926 to about 2,171,000,000,000 in 1952. Though this growth partly resulted from heavier population, the wider use of energy was responsible for an increase in the net amount used per head of population from 115,000,000 B.t.u. in 1926 to 151,000,000 in 1952. The part played by liquid petroleum fuels in the total energy picture increased considerably over the period; in 1926, they supplied about 9 p.c. of Canada's net consumption of energy and in 1952 about 37 p.c. Although detailed statistics of the increase over the past six years are not available, it is obvious that the trend is continuing. At the time of the study, the advance was attributed to increased use by industry, a large increase in the consumption of fuel oil for heating homes and buildings, and the conversion of the railroads to diesel locomotives—three factors that have in no way lessened in more recent years.

The non-ferrous smelting and refining industry, Canada's third largest manufacturing industry, shipped products to the value of \$1,280,000,000 in 1957. Canada is one of the world's leading producers of non-ferrous metals, standing first in the production of nickel, second in aluminum, third in zinc, fourth in lead, and fifth in copper. These figures do not include the metallic content of exported ore. Canada is the world's leading exporter of non-ferrous metals.

Many of the country's most important base-metal ore bodies were discovered before the turn of the century, but their complexity prevented early exploitation. Unlike important deposits in other countries, which consist largely of oxides or of sulphides of a single metal, they were found to contain ores of two or more base metals intimately associated and frequently containing appreciable quantities of precious metals, such as gold, silver and platinum. Their development was the result of considerable skill and enterprise. The industry operates smelters and refineries that rank among the largest and most highly integrated of their kind in the world. Cheap water power located near the ore bodies is another advantage that enabled the industry to sell in world markets at competitive prices. The smelting industry is based largely on Canadian ores, with the major exception of the aluminum plants which import bauxite and alumina, depending on cheap electric power for their success in international trade. Exports of products of this industry in 1957 included nickel in various forms (\$248,000,000), aluminum in primary forms (\$217,000,000), copper in primary forms (\$155,000,000), zinc slab or cake (\$43,000,000) and pig lead (\$19,000,000). These together amounted to about \$682,000,000, or 45 p.c. of the total value of the industry's shipments.

Three of Canada's fifteen largest manufacturing industries are occupied in the production of transportation equipment; the motor vehicles industry ranked fourth in 1957 with sales of \$949,000,000, the aircraft and parts industry ninth with sales of \$424,000,000, and the railway rolling-stock industry tenth with sales of \$387,000,000.

The main items shipped by the motor vehicles industry were approximately 340,000 passenger cars valued at \$639,852,000, 71,400 trucks valued at \$141,086,000, and 444 buses valued at \$8,583,000. Of the vehicles shipped, 21,600 passenger cars worth \$23,000,000 (including 5,900 chassis without bodies) and 7,000 trucks worth about \$7,000,000 were shipped for export. Imports included about 70,800 passenger cars, 8,200 trucks and 1,000 buses, with a total value of \$136,000,000. Taking into account production, imports and exports, the apparent supply of new vehicles in Canada in 1957 was 389,000 passenger cars and 74,000 commercial vehicles. This new supply was offset by the withdrawal from use of about 201,000 passenger cars and 33,000 commercial vehicles. Total registrations during the year covered 3,383,000 passenger cars and 1,041,000 commercial vehicles so that there was one passenger car for every five persons in the country. Taking all motor vehicles together, including motorcycles and tractors, there was one vehicle for every four persons. Ontario has one of the world's heaviest concentrations of automobile ownership. In that province, there was one motor vehicle for every 3.2 persons.

Fifth in value of factory shipments in 1957 was the slaughtering and meat packing industry. With shipments valued at \$907,000,000, it was the leading industry of the foods group. Butter and cheese factories ranked eighth with sales of \$470,000,000, the miscellaneous food preparations industry thirteenth with sales of \$336,000,000, and bakeries fourteenth with sales of \$331,000,000. In terms of value added by manufacture, these industries, except for bakeries, would be considerably lower on the list. Their products are not so highly processed as are those of many other industries and much less is added in the manufacturing process to the value of their raw materials. Shipments by the slaughtering and meat packing industry included \$487,000,000 worth of fresh and frozen meats, \$137,000,000 worth of cured and smoked meats, and \$102,000,000 worth of sausage and cooked meats. Inedible by-products included \$105,000,000 worth of cattle hides. To produce these items, the industry slaughtered over 8,000,000 animals valued at \$516,000,000 in 1957.

Of the \$470,000,000 worth of shipments by butter and cheese factories in 1957, milk and cream sold as such brought in \$194,000,000, and ice cream \$39,000,000. About 286,000,000 lb. of butter and 120,000,000 lb. of cheese were shipped, together valued at \$210,000,000.

The miscellaneous food preparations industry, which ranked thirteenth with sales of \$336,000,000, depends largely on imported materials but sells almost entirely in the domestic market. Over one-third of the industry's activities are concerned with the roasting and packing of coffee, and the blending and packing of tea. Shipments of coffee were valued at \$68,000,000 and those of tea at \$47,000,000 in 1957.

The bread and other bakery products industry, which came fourteenth among the industries in 1957, produced goods to the value of \$331,000,000, all for the home market. Bread sales accounted for \$198,000,000 of this total; the average per capita consumption of bread was 99.7 lb., which was 1.6 lb. more than in 1955 but still 5.7 lb. less than in 1953.

The primary iron and steel industry in Canada has expanded considerably in recent years and important technical developments have been pioneered in this country, including the continuous casting of steel shapes and a faster process for the use of oxygen in steel-making. In 1957, shipments valued at \$705,000,000 placed the industry sixth among the industries of the country. Production amounted to 5,068,000 tons of steel. Few of the steel ingots produced were sold as such, nearly all of them being further processed by the makers. About 23 p.c. of the 3,718,000 tons of pig iron produced was sold to other firms. The industry is dominated by four integrated plants, two of them at Hamilton, Ont., and one each at Sydney, N.S., and Sault Ste. Marie, Ont. There are also other steel plants across the country which feed their furnaces on purchased pig iron and scrap, and two blast furnaces which do not form part of an integrated steel plant. The industry uses a good deal of Canadian iron ore and coke from Canadian coal, but imported ore is

mainly used. This is partly because some plants can ship ore more conveniently from United States mines than from Canadian mines, and partly because a blast furnace requires a range of different types of iron ore and must therefore rely on varied sources.

The lumber industry has been a mainstay of Canada's economy since the earliest days and in 1957 ranked as the seventh largest manufacturing industry of the country. In that year sawmill products shipped were valued at about \$556,000,000 and consisted mainly of lumber (\$466,000,000), shingles (\$14,000,000) and railroad ties (\$12,000,000). Of the lumber sawn, 60 p.c. by value was produced in British Columbia, 16 p.c. in Quebec, and 12 p.c. in Ontario. Softwoods made up 94 p.c. by quantity of the lumber sawn. Exports from Canada of planks, boards and shingles were valued at \$301,000,000 in 1957, as compared with \$414,000,000 in 1955. The decline in the export demand for Canadian sawmill products during the past few years resulted in a drop of about 14 p.c. in the physical volume of production of the sawmilling industry.

The production of aircraft and parts was a major industry in Canada during the Second World War but output declined abruptly afterwards. In 1950 production amounted to only \$55,000,000, but by 1957 total shipments had increased to \$424,443,000, including \$75,000,000 worth of parts alone, although this total remained well below the \$427,000,000 recorded in 1944. Part of the increase shown for 1957 was attributed to the inclusion for the first time of plants primarily engaged in the servicing and overhaul of aircraft, except for overhaul and servicing depots maintained by the major airlines and operated as part of their transport system. The postwar expansion of the industry began with the outbreak of hostilities in Korea in 1950 and has featured the development of an all-Canadian long-range fighter for northern defence and the production of several types of defence aircraft designed in the United States or the United Kingdom. The industry, however, is not dependent entirely on the defence program. Several types of civilian aircraft developed to meet Canadian flying conditions, especially in the vast areas of the North, have also met with a good response from users abroad. The expansion of aircraft production has been accompanied by the establishment of facilities for producing many components, such as aircraft instruments, needle bearings, and special alloys to withstand the heat of jet engines.

The railway rolling-stock industry, with shipments valued at \$387,000,000 in 1957, ranked tenth. In 1949 it ranked ninth, having declined in importance due to a drop of about 10 p.c. in volume of output. The fortunes of this industry are closely linked to those of the country's railways, since the demands made on it are dependent on the needs of the railways for new equipment and replacements.

The miscellaneous electrical apparatus and supplies industry, the main products of which are electric wire and cables, electric light bulbs and fluorescent tubes, made its first appearance among the top fifteen industries in 1954. In 1957 it was in eleventh place. This group includes only some of the electrical industries that have shown extremely rapid growth in recent years. While the miscellaneous industry shipped goods to the value of \$381,000,000 in 1957, the telecommunications equipment industry had a production valued at \$218,000,000, the heavy electrical machinery industry at \$301,000,000, the industries producing refrigerators, vacuum cleaners and appliances at \$136,000,000, and the batteries industry at \$42,000,000.

Twelfth in importance was the industrial machinery industry, with shipments valued at \$363,000,000 in 1957. Since 1952 this industry has experienced an increase of 23 p.c. in employment and 60 p.c. in the value of factory shipments, another reflection of the rapid industrialization of the past few years.

The rubber goods industry, fifteenth in the field with shipments of \$326,000,000 in 1957, depends mainly on the home market. It is heavily influenced by the automotive industry because tires and tubes together make up over half the shipments, the other major item being rubber footwear. Of the rubber used in 1957, 39.1 p.c. was imported natural rubber, 45.5 p.c. was domestically produced synthetic rubber and the remainder was reclaimed rubber.

STEEL IN CANADA*

Primary steel production is now one of Canada's most important manufacturing industries, ranking sixth among all industries in terms of value of output, and fourth in terms of value added, by the processing of raw materials, to marketable products. In 1957, the industry employed about 36,000 persons making it the third largest employer of labour in Canadian manufacturing.

HISTORY

The steel industry in Canada traces its origins to the establishment of iron-producing facilities in the Province of Quebec about 1730 and to similar establishments founded in Eastern Canada during the next one hundred and fifty years. While some of these small enterprises enjoyed short-term success, all eventually were forced to cease operation. It was not until 1874 that the first steel was produced in Canada—a short-lived mill using the Siemens open-hearth process started operations not far from Truro, N.S. About the same time several steel rolling-mills using imported steel were established in various parts of the country and by 1905 most of the major mills which today comprise a large portion of Canada's steel industry had been brought into operation. Their establishment and success was attributable to two important factors—the development of a national tariff policy and the demand for steel by the railways in the form of rails and rolling-stock.

Production increased rapidly between 1900 and 1914 and during World War I capacity was further increased to meet wartime requirements, so much so that there was an excess of steel-making capacity in Canada for a considerable period after the end of that War.⁴

* Prepared by E. Westbrook and F. M. Pelletier, Domestic Industry Analysis Division, Economics Branch, Department of Trade and Commerce, Ottawa.

Despite this over-expansion and the limited requirements during the two depression periods of the 1920's and 1930's, Canada's steel ingot capacity increased from 1,600,000 tons in 1918 to 2,200,000 tons in 1939. During this period a general consolidation took place which led to the forming of the large companies which today are the principal steel producers. At the same time there was a relative decline in the railways' demand for steel, and a new type of demand made its appearance based on the consumer durable goods industries which had begun to grow during this period. The Second World War led to a further round of steel expansion and, by the end of that conflict, Canadian steel capacity was 30 p.c. higher than it had been in 1939 and was capable of producing greater varieties and forms of steel.

I.—STEEL CAPACITY, PRODUCTION AND CONSUMPTION, SELECTED YEARS 1910-57

(Millions of tons)

1957.....	6.3	5.0	7.6

¹ On an equivalent steel ingots and castings basis.

However, it will be seen from the above table that the Canadian steel industry has undergone its most important period of development since 1945. It was during this postwar period that steel production became an integrated operation. Today the industry produces an almost complete range of all types of steel rolling-mill products. Particularly noticeable are the additions to the capacity to produce hot and cold rolled sheet and strip and also galvanized sheet and tinplate. By the end of 1957 Canadian capacity to produce pipe was four times greater than in 1945. Present total Canadian capacity to produce steel is around 6,300,000 tons a year making this country the seventh largest producer in the world. In per capita capacity Canada ranks sixth among the nations of the world, but in per capita consumption Canada is exceeded only by the United States.

STEEL-MAKING FACILITIES

The raw materials situation of the Canadian steel industry is unusual. Most of the coal consumed by the industry is imported. The Dominion Steel and Coal Corporation at Sydney, N.S., is the only producer using Canadian coal; the others make their coke from coal mined in United States coalfields which are adjacent to their steel-making facilities in Canada. A considerable quantity of iron ore is also imported from the United States, where Canadian producers have important holdings, but major iron-ore discoveries in Canada in recent years have led to a greater consumption of Canadian iron ore in this country. Canadian capacity to produce pig iron is now approximately 4,100,000 tons annually compared with 2,700,000 tons in 1946. Not only has steel production become more integrated in total but a better balance has been achieved in the individual mills between their basic steel-making facilities and their rolling-mill capacities.

Nearly all of the carbon steel made in Canada is a product of open-hearth furnaces, although Canada now has a number of basic oxygen furnaces in operation. These oxygen facilities have all been introduced since 1954 and are based on the LD-steel-making* technique originally developed in Austria. Almost all the high-quality alloy steels made in Canada are electric furnace products. Most of the major producers have such facilities and also a small number of producers specialize in the production of quality steels. All the smaller bar producers use electric furnaces to make molten metal from scrap. An interesting postwar development at one Canadian mill has been the introduction of a continuous casting machine, which pours molten steel directly into a workable slab. This installation is part of a mill which produces stainless steel sheet, strip, tube, bar and rod.

ROLLING-MILL CAPACITY

Perhaps the most important advances that have occurred in the postwar years have been in the field of rolling-mill capacity. For instance, three new blooming mills were put in operation, without which there would have been little expansion in other fields of the steel industry. For it is in the blooming mill that steel ingots are rolled into blooms and slabs and it is from these forms that all the other rolling-mill products are made—blooms are the primary form of bars, wire and other products of this type, while sheet and other flat-rolled products are made from slabs. Blooms are sent to a billet mill and slabs to a plate mill. In 1945 Canada had capacity to produce 198,000 tons of structural steel a year; today structural capacity is about 374,000 tons and the number of types and sizes have increased notably. However, Canada's capacity to produce structurals is still considerably short of meeting domestic requirements in years of peak demand, a situation attributable to the occurrence of wide fluctuations in demand and to the existence of a relatively low tariff. Another factor is the low value of structurals per ton of steel and the shortness of runs in a high-volume operation. Canadian mills therefore have preferred to invest in those sectors of the industry where there is a greater return per dollar invested.

After the end of the War in 1945, it was necessary to make adjustments in connection with the additions to Canadian plate mill capacity made to meet wartime requirements. Thus by 1948 plate mill capacity was lower than it was in 1945. Since 1948, plate capacity, through the expansion and conversion of existing facilities, increased from 220,000 tons in 1948 to 472,000 tons in 1957. The first new addition to facilities was a large plate mill completed early in 1959. The great resource-development program of recent years has probably been the most important factor leading to this expansion, in addition to the heavy demand for large-size pipe for the transportation of oil and gas across the country.

Bar and rod capacity has also expanded and, though perhaps overshadowed by developments in other types of steel, it should be remembered that many of the present-day mills began their operations with the output of these products. New trends in building construction have necessitated an increase in the production capacity for reinforcing bars. There has also been an increase in the capacity to produce cold rolled bars, though the

* Linz-Donowitz steel-making technique.

THE CANADIAN PRIMARY IRON AND STEEL INDUSTRY, 1957

volume is still small relative to other types of steel. An interesting development is the establishment of two new bar and rod mills in Western Canada since the end of the War, one at Edmonton and one at Vancouver.

The dramatic expansion that has taken place in Canada's capacity to produce sheet and strip has already been mentioned. In 1945 Canada could produce 356,000 tons of hot rolled sheet and strip; by 1957 Canadian mills had a capacity in excess of 1,000,000 tons. In 1945 cold-rolled sheet and strip capacity amounted to 324,000 tons; today it is more than 681,000 tons. At the end of World War II, galvanized sheet and tinplate capacity together amounted to 434,000 tons; today Canada has a productive capacity of 319,000 tons of galvanized sheet and 368,000 tons of tinplate annually. These increases may be attributed mainly to the high level of housing construction, to the demand for consumer durables and to the displacement of imports since 1948.

III.—ROLLING-MILL CAPACITY OF MAJOR STEEL PRODUCTS, SELECTED YEARS 1945-57

NOTE.—Estimated capacity shown is the maximum annual potential capacity, i.e., for a continuous strip-sheet mill capable of producing both plates and sheets, the full capacity of the mill to produce each product is included. Therefore capacity for each of the principal classes shown cannot be totalled.

¹ Includes a large quantity of track materials.

Rail and track material capacity remained almost unchanged from the beginning of the century following the period of rapid railroad expansion. While the production of these items may not have the relative importance they once had, nevertheless they are often important factors in maintaining employment during seasonal off-peak periods. The production of wire rod and wire products (nails, wire and fencing) is another area of the steel industry that has not experienced the growth evident elsewhere. This can be attributed in large part to competition from imports and also to changes in the pattern of domestic demand. An example of the latter is the decline in the demand for barbed wire as a result of the greater use of electric fencing.

The greatest increase in capacity has occurred in that part of the steel industry producing pipe and tube. In 1945 Canadian mills were limited to the production of the smaller sizes of pipe used in housing and commercial construction and maintenance but the discovery and development of the Alberta oil and gas fields created an urgent demand for transmission-line pipe and well casing. Most of this demand was at first met from abroad, but Canadian pipe mills, constructed in various parts of the country, are now capable of meeting the domestic requirement for nearly all types of pipe. In 1945 total capacity to produce pipe was about 289,000 tons; today Canada can produce 1,236,200 tons annually. In 1946 the maximum size of pipe that could be produced was 16 inches; today pipe up to 36 inches in diameter is made in Canadian mills. Pipe production in 1946 was limited to the output of butt-weld and electric-weld pipe; today Canada includes

Steel is a vital element in the economy—basic to almost every manufacturing industry and basic to the construction projects that are adding to the wealth of the country. New capacity, technical improvements and diversification of product have increased efficiency and stabilized the industry which now produces about 75 p.c. of domestic consumption. Canadian steel is used most extensively in construction, in railway equipment, in oil and gas pipelines and in the making of merchant trade goods and containers—these items taking about 63 p.c. of the output. Machine tools, exports, motor vehicles and pressed and stamped goods take most of the remainder.

Building Construction—17.7 p.c.

Pressing, Forming and Stamping—4.3 p.c.

Automotive Industries—5.2 p.c.

Exports—5.5 p.c.

Railways—15.4 p.c.

Pipes and Tubes—12.1 p.c.

Merchant Trade Goods—10.0 p.c.

Machinery and Tools—6.0 p.c.

Containers—7.7 p.c.

in its pipe-making facilities one of the most modern seamless pipe mills in the world. Interesting also is the distribution of these facilities across the country—pipe mills are now operating in Quebec, Ontario, Saskatchewan, Alberta and British Columbia.

CONSUMPTION OF CANADIAN-MADE STEEL

An important feature of the postwar development of the Canadian steel industry has been the changing pattern of Canadian demand for domestically produced steel. The following table shows the changing position of the steel industry's major customers.

IV.—DISTRIBUTION OF CANADIAN-MADE STEEL TO PRINCIPAL CONSUMERS, SELECTED YEARS 1946-57

SOURCE: DBS report *The Primary Iron and Steel Industry*.

Consumer	1946		1950		1953		1955		1957

Pressing, forming and stamping.....	87.8	4.6	187.1	6.6	153.2	4.7	258.9	7.1	164.3	4.3
All others.....	242.8	12.6	317.4	11.3	369.5	11.4	362.7	10.1	721.2	18.7

Throughout the period, there has been an almost continuing shift towards a relatively greater steel consumption by the producer and consumer durables sector of the economy. In this apparent movement there is implied not only a greater maturity of the Canadian steel industry by its ability to supply a greater variety and quality of rolling-mill products, but also a trend towards the more complete processing of its products by Canadian industry. Nevertheless, the greatest increases in steel consumption since 1946 have occurred in the construction industry, which rose by 258 p.c., followed by the automobile industry with an increase in consumption of 136 p.c., and machinery and tools with 121 p.c.

LABOUR FORCE

The primary steel industry now employs almost 36,000 persons and in addition provides jobs for nearly 200,000 Canadians in directly related industries. Employment has increased by 17 p.c. since 1945. Average weekly earnings are now about \$95 a week, fourth highest among the manufacturing industries. Average hourly rates in 1958 were \$2.20 per hour, second only to those paid by the petroleum and coal products industries.

FOREIGN TRADE

Canada has never been a major exporter of steel; exports have exceeded 200,000 tons only during periods of world steel shortage, or when there has been an excess of steel in the domestic market and Canadian producers have sought to maintain output by exporting. In recent years, most of the steel export trade has been concentrated in pig iron and railroad rails. Over 17 p.c. of all the rails produced in Canada have been exported in the past five years. These orders have been obtained despite severe competition from foreign producers, for there is a general excess of rail-making capacity in the world.

Steel imports have always been a major factor in the Canadian economy, and while domestic capacity has expanded considerably in recent years, imports have made up an average of approximately 30 p.c. of total consumption since 1946. During periods of

pronounced expansion the percentage increases, as in 1951 when it was 34 p.c.; conversely in periods of slower growth it declines, as in 1954 when imports accounted for about 25 p.c. of the Canadian market.

Imports have held an almost continuously larger share of the market for structurals and piling than for any other type of steel. Since 1946 structural imports averaged 56 p.c. of Canadian consumption of this type of steel. Such imports are particularly important in those periods in which there is considerable resource investment. Canadian capacity to produce structurals has averaged less than 60 p.c. of total requirements during the past five years.

V.—IMPORTS AND EXPORTS OF STEEL ROLLING-MILL PRODUCTS, 1946-57

NOTE.—Primary rolling-mill products only are included and not such secondary products as pipe, wire, nails and stampings. SOURCE: DBS report *The Primary Iron and Steel Industry*.

Year	Imports	Exports	Year	Imports	Exports
	'000 tons	'000 tons		'000 tons	'000 tons
1946.....	655	105	1952.....	1,187	73
1947.....	818	98	1953.....	1,001	116
1948.....	779	233	1954.....	764	36
1949.....	964	142	1955.....	929	165
1950.....	834	59	1956.....	1,609	158
1951.....	1,318	46	1957.....	1,493	205

Imports of plates are an important item and have accounted on the average for 41 p.c. of the total plate market since 1946. Plates are associated with the resource-development program and, in particular, the manufacture of the large-size transmission pipe. At present Canada's capacity to produce wide plate is limited, and this size of plate has always had a considerable import volume. The expansion of Canadian plate facilities now under way should in the future effect a decline in the share of the market held by plate imports.

On the other hand, Canadian producers of bar and rod have traditionally held a large share of the market, and imports have accounted for only 12 p.c. of total demand since 1946. Imports are usually important only in those years in which domestic demand is well in excess of Canadian supply. The most important import of this type of steel is hot-rolled bars.

VI.—IMPORTS OF MAJOR STEEL ROLLING-MILL PRODUCTS, SELECTED YEARS 1946-57

SOURCE: DBS report *The Primary Iron and Steel Industry*.

Type of Steel	1946	1948	1950	1953	1957
	'000 tons	'000 tons	'000 tons	'000 tons	'000 tons
Structurals.....	95	162	158	254	543
Plate.....	60	66	107	154	311
Bar and rod.....	99	121	85	132	144
Sheet and strip.....	326	342	285	304	201
Pipe and tube.....	41	75	204	300	722

Steel sheet and strip imports have averaged 37 p.c. of total domestic consumption of this type of steel since 1946, but with increasing Canadian capacity the import trend is downward, particularly of galvanized sheet and cold-rolled sheet and strip. Pipes and tubes have been major import items since 1950, noticeably so in oil country goods. However, the growth in domestic capacity to produce pipe and tube has reached the point where it can meet all Canadian requirements and will offer serious competition to foreign producers in the domestic market. Imports of wire, fencing and rails have also been extensive. Unlike many other steel imports, which generally reach their peak in periods of short supply, imports of these items have been almost continuously in direct competition with Canadian producers. Canadian capacity to produce wire, fencing and rails is generally in excess of domestic demand.

About 80 p.c. of the steel imported into Canada since 1956 came from the United States, 10 p.c. from the United Kingdom, 6.5 p.c. from Belgium and about 1 p.c. from Germany.

It is evident that the long-run trend indicates an increase in steel consumption in Canada, but there can be considerable fluctuation in short-run tendencies which present even greater difficulties for producers of individual types and forms of steel. One of the major problems, then, of the Canadian steel industry is to judge when the market has grown sufficiently for the expansion of facilities. Since 1946 the industry has invested over \$498,000,000 in new plant and equipment, placing it fourth among all manufacturing industries in terms of new investment since the end of World War II. There is every indication that investment will continue at the same pace in the future. It is particularly noteworthy that not only has there been a considerable volume of capital expenditure, but the industry has been willing to invest in new techniques and processes well ahead of many other major steel-producing countries. The budget of June 1958 included a major revision in the tariff items relating to steel rolling-mill products and steel pipes and tubes. This change was the first thorough review of the tariff in over fifty years. It eliminated many items that had fallen into disuse and offered incentives for the expansion of the domestic industry to meet the future needs of Canadian industry, construction and transportation. Though the Canadian per capita consumption of 973 lb. a year is still considerably below the United States figure of 1,323 lb., the gap has narrowed in recent years and gives every indication of continuing to do so. This, along with a steadily rising population, presents a bright future for the Canadian steel industry.

PART II.—STATISTICS OF MANUFACTURING

Section 1.—Growth of Manufacturing

It is impossible to give absolutely comparable statistics of manufacturing over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, though numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made to carry all major revisions back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

The Bureau of Statistics in 1952 changed its policy with regard to the collection of statistics on the production of manufactured goods. Firms in several industries where year-end inventory changes were known to be insignificant were requested to report value of shipments f.o.b. plant instead of gross value of products. Under the "value of products" concept, establishments were asked to report the factory selling value of the products made whether sold or not, the unsold portion being assigned the average selling value of similar articles sold during the year. Under the "selling value of shipments" concept, establishments are required to report their sales during the year regardless of when the products were made, an item usually readily available from the firms' records. The changeover was made to provide increased ease in reporting for the majority of plants and at the same time to produce more reliable and useful statistics.

1.—Summary Statistics of Manufactures, 1917-56

NOTE.—Statistics of manufacturing from 1870 have been published but between that year and 1917 figures are not on a comparable basis to the series given below. Statistics for significant years appear in the 1943-44 Year Book, p. 363. Figures of the non-ferrous metal smelting industries were first included with manufactures in 1925.

Year	Estab- lish- ments	Employees	Salaries and Wages	Cost at Plant of Materials Used	Value Added by Manufacture ¹	Gross Value of Products ²

¹ For 1924-51, inclusive, the value added by manufacture is computed by subtracting the cost of fuel, electricity and materials from the gross value of products; for 1952 and 1953 the deduction is made from value of factory shipments and for 1954 and subsequent years from the calculated value of production. Figures prior to 1924 are not comparable because statistics for cost of electricity are not available. ² In 1952 gross value of products was replaced by selling value of factory shipments; see text immediately preceding this table. ³ A change in the method of computing the number of employees in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted. ⁴ Newfoundland is included from 1949 but figures for the fish processing industry for 1949 and 1950 are not available for that province and are not included.

Provincial distribution of manufactures is shown for certain years from 1917 to 1956 in Table 2.

¹ See footnote 1, Table 1.² In 1952 gross value of products was replaced by selling value of factory shipments; see text on p. 626.³ Excludes figures for the fish processing industry which were not available for 1949.⁴ See footnote 3, Table 1.⁵ Includes Yukon Territory.

The figures in Table 3 trace the tendencies in manufacturing industries as clearly as possible from 1917 to 1956. In analysing statistics of production and materials used, price changes should be borne in mind, particularly the inflation of values in the years immediately following World War I, the drop in prices of commodities during the depressions following 1921 and 1930, and the increases again in World War II and the postwar period.

¹ A change in the method of computing the number of production workers in the years 1925 to 1930 inclusive increased the number somewhat over that which the method otherwise used would have given. There was therefore a proportionate reduction in the averages for 1925-30 per employee as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are therefore comparable with those for 1924 and earlier years.

² Net value of products; see footnote 1, Table I, p. 627.

³ In 1952 gross value of products was replaced by value of factory shipments; see text on p. 626.

Subsection 1.—Consumption of Manufactured Products

The value of all manufactured commodities made available for consumption in 1956 was \$23,014,011,922, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured and partly manufactured goods, and deducting the value of the exports. More accurate statistics could be presented were it possible to exclude from the gross value of manufactured products the duplications involved when the products of one manufacturing establishment become the material worked upon in another. Iron, vegetable, wood and paper, non-ferrous metals, non-metallic minerals, textiles and animal products were, in that order, the leading groups in the value of finished products made available for consumption in 1956.

Wood and paper, animal, and non-ferrous metal products were manufactured in Canada in greater quantities than required for home consumption, providing export balances in these groups.

On balance, Canada in the past imported large quantities of iron and steel, textiles, chemicals and non-metallic mineral products despite large home production. The expansion of the iron and steel, chemical and non-metallic mineral products industries is enabling Canada to meet a greater proportion of domestic requirements.

Totals, 1956.....	21,636,748,986	4,639,037,713	3,261,774,777	23,014,011,922

¹ In 1952 gross value of products was replaced by selling value of factory shipments; see text on p. 626. ² Figures for the years 1929 and 1933 are for the fiscal years ended Mar. 31 of the following years; for 1939-56 they are for the calendar year. Net imports are total imports less foreign products re-exported.

³ Consumption figures for the major standard industrial classification groups (see p. 635) cannot be calculated because statistics of imports and exports are compiled on the component material classification basis.

Subsection 2.—Value and Volume of Manufactured Production

Value of Manufactured Production.—In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind. In recent years owing to large changes in prices, unadjusted value series used in isolation have become increasingly inadequate as indicators of economic trends. Consequently interest has shifted to measures of volume. The range of prices since 1929, on the base period 1935-39=100, is as follows:—

Year	General Wholesale Price Index	Price Index of Fully or Chiefly Manufactured Products
1929.....	124.6	123.7
1933.....	87.4	93.3
1939.....	99.2	101.9
1944.....	130.6	129.1
1946.....	138.9	138.0
1949.....	198.3	199.2
1952.....	228.0	230.7
1953.....	220.7	228.8
1954.....	217.0	224.2
1955.....	218.9	224.5
1956.....	225.6	231.5

Volume of Manufactured Production.—Real income is ultimately measured in goods and services so that the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services and not whether they are expending more dollars and cents. The field of industrial production, because of its dominating position in the national economy, has attracted increasing attention and this in turn has resulted in the need for more accurate measurements of physical output.

During the past few years the Dominion Bureau of Statistics has been engaged in the reconstruction of the index of industrial production* which was first published in 1926 and later subjected to several major revisions. The latest reconstruction was made possible by the availability of a great deal of basic data. Annual statistics valuable for this project have been collected by the Bureau from the end of World War I to the present and the scope of the monthly information has been greatly expanded. Applying methods developed through the experience of the past quarter-century, it has been possible to compute an index with a fair measure of accuracy from 1935 to the present.

The manufacturing sector is divided, at the major group level, into durable manufactures and non-durable manufactures, for the reason that the movement of durable goods normally varies from that of non-durables. There tends to be greater fluctuation in durables from prosperity to depression, the demand for non-durables being more constant.

5.—Index of the Total Volume of Manufactured Production classified on the Basis of Durable and Non-durable Goods, 1947-56

(1935-39=100)

NOTE.—Figures for the years 1935-46 are given in the 1955 Year Book, p. 641.

Year	Non-durable Manufactures	Durable Manufactures	All Manufactures	Year	Non-durable Manufactures	Durable Manufactures	All Manufactures
1947.....	191.2	233.5	207.7	1952.....	215.2	294.9	246.3
1948.....	197.1	244.4	215.5	1953.....	224.1	323.9	263.0
1949.....	198.2	246.3	217.0	1954.....	221.7	297.7	251.4
1950.....	208.3	259.1	228.1	1955.....	235.2	324.8	270.1
1951.....	214.0	285.9	242.1	1956.....	245.6	348.9	285.9

The period 1947-56 was characterized by unprecedented industrial expansion. The end of hostilities in 1945 and the subsequent reconversion to peacetime production were attended by declines in output but the upward trend was resumed in 1947. The rate of advance slackened moderately in 1948 and 1949 but regained most of its 1947 impetus in 1950 when the outbreak of hostilities in Korea resulted in heavy anticipatory buying on the part of consumers and in growing expenditures for national defence. A remarkable feature is that in 1952 the index of the volume of manufacturing production stood at 246.3, having surpassed the record wartime level of 242.3 established in 1944. The index continued to advance in 1953, dropped somewhat in 1954 but moved upward again to a new high of 285.9 in 1956. The improvement in the latest years was the result of accelerated spending on capital goods particularly stimulating the durable goods industries, the improvement in the export demand for many Canadian manufactured commodities, and the impact on consumer goods industries of increased population and higher labour income.

Durable Manufactures.—In the postwar period the volume index of durable manufactures has shown a steady advance, except for 1954, reaching a high of 348.9 in 1956. All groups in the sector reported higher levels of production than in 1955. The greatest

* For a description of the methods used in constructing the index and a description of its scope, see DBS Reference Paper No. 34. *Revised Index of Industrial Production, 1935-1951.*

increase of 14.1 p.c. was made by the iron and steel products group, followed by non-metallic mineral products with 11.5 p.c. The transportation equipment group, the only group in this sector reporting a decline in 1955, increased 6.0 p.c. in 1956. The electrical apparatus and supplies group followed its continuously upward trend with a 2.8-p.c. increase, and wood products reported a modest rise of 0.5 p.c. In the latter group, the increased volume of wood products needed to satisfy the requirements of the domestic boom in construction was just about counterbalanced by a decline in export sales.

6.—Indexes of the Volume of Manufactured Production of the Groups Comprised within the Durable Manufactures Classification, 1947-56

(1935-39=100)

NOTE.—Indexes for the years 1935-46 are given in the 1954 Year Book, p. 630.

Year	Wood Products	Iron and Steel Products	Transportation Equipment	Non-ferrous Metal Products	Electrical Apparatus and Supplies	Non-metallic Mineral Products
1947.....	195.6	249.9	239.5	182.8	316.8	269.8
1948.....	200.7	270.4	232.6	201.6	328.5	283.7
1949.....	202.3	264.5	243.9	200.5	333.8	284.4
1950.....	215.1	263.2	262.2	212.8	367.6	314.6
1951.....	220.6	292.2	315.0	234.7	392.3	342.1
1952.....	214.1	292.7	373.1	232.2	393.1	346.1
1953.....	235.3	290.8	436.3	243.3	486.7	399.0
1954.....	230.3	251.8	354.9	246.7	477.8	409.5
1955.....	255.1	287.3	350.7	270.9	535.2	471.5
1956.....	256.5	327.8	371.9	285.7	550.3	525.9

Non-durable Manufactures.—The trend of output among the individual groups of the non-durable sector of manufacturing in the postwar period was visibly smoother than in the durable sector although the general trend was the same—except for 1954 no interruption occurred in the upward movement of production. Unlike durable goods, non-durable commodities are mostly consumer goods and are less influenced by sudden changes in the international situation or the capital investment programs of producers and governments. By 1956 the non-durables index of output had reached 245.6, the highest on record. All groups except textiles reported increased activity in 1956 as compared with 1955, the highest being reported by the petroleum and coal group with a 14.7-p.c. rise. Leather products reversed a long-term downward trend to record an 8.2-p.c. increase, second highest among the non-durables.

7.—Indexes of the Volume of Manufactured Production of the Groups Comprised within the Non-durable Manufactures Classification, 1947-56

(1935-39=100)

NOTE.—Indexes for the years 1935-46 are given in the 1954 Year Book, p. 629.

Section 2.—Manufactured Production Variouslly Classified

Subsection 1.—Manufactures classified by Industrial Groups and Individual Industries

Manufacturing production in Canada, after a downward adjustment in 1954, began to move upward in the summer of 1955 and continued to improve at an accelerated rate throughout 1956. The selling value of factory shipments for that year was the highest on record at \$21,636,748,986, exceeding the 1955 total by 10.9 p.c. and the 1953 total, the previous peak, by 21.7 p.c. However, about half of the gain over 1955 was accounted for by higher prices, the actual increase in the physical volume of production amounting to 5.4 p.c. In employment the record was not quite so impressive. Although a record number of persons were employed in 1956, the increase over 1955 was 4.2 p.c. and over the high point of 1953 only 2.0 p.c. Salaries and wages paid in 1956 at \$4,570,692,190, and value added by manufacture, at \$9,605,424,579, were also the highest on record.

Heavy investment in facilities for the production of durable goods was reflected in output in 1956. Production of pig iron rose from 3,215,367 tons in 1955 to 3,568,203 tons, steel ingots and castings from 4,534,672 tons to 5,301,202 tons, aluminum from 612,543 tons to 620,321 tons, nickel from 174,928 tons to 178,515 tons, cement from 4,404,480 tons to 5,021,683 tons, and motor vehicles from 452,114 units to 471,350 units. Export demand for Canadian manufactured goods was particularly apparent in newsprint, whisky, aluminum and its products, copper and its products, aircraft, lead and its products, non-farm machinery and synthetic plastics, all of which showed substantial increases in production over 1955. Exports of wood pulp, nickel, automobiles and parts, artificial crude abrasives, and zinc and its products were moderately higher, while exports of planks and boards, red cedar shingles, veneer and plywood, wheat flour, farm machinery and fertilizers were considerably lower.

The magnitude of the development that has taken place in Canadian manufacturing in the postwar years is strikingly illustrated by the increase of 50.6 p.c. in the physical volume of manufactured products between 1946 and 1956, as compared with an increase of 31 p.c. in the population. It is noteworthy that the increase in the volume of durable goods produced was 70.1 p.c. as against an increase of 36.3 p.c. in non-durables.

With only one exception, all groups in both the durable and non-durable goods sectors recorded marked advances in volume output in the ten-year period; the exception was leather products which showed a decline of 11.9 p.c. Among durable goods, the most striking advance was made by the non-metallic mineral products group, with an increase of 137.5 p.c., followed by electrical apparatus and supplies with 122.5 p.c., non-ferrous metal products 78.5 p.c., transportation equipment 67.9 p.c., iron and steel products 47.3 p.c. and wood products 46.6 p.c.

Among the non-durables, the greatest advance was achieved by the products of the petroleum and coal group with 164.3 p.c. Rubber and rubber products followed with an increase of 101.6 p.c., printing, publishing and allied industries with 64.7 p.c., beverages 60.6 p.c., tobacco and tobacco products 59.2 p.c., paper products 48.1 p.c., chemicals and allied products 26.5 p.c., foods 15.9 p.c., textiles 12.8 p.c., and clothing 2.0 p.c.

8.—Percentage Variations in Employment, Salaries and Wages and Selling Value of Factory Shipments in the Main Industrial Groups, 1956 Compared with 1955

Industrial Group	1956 Compared with 1955

¹ In 1952 gross value of products was replaced by selling value of factory shipments; see text on p. 626.

Detailed Statistics by Group and Individual Industries.—Table 10 presents detailed statistics for 1956 regarding the individual industries under which all industrial plants in Canada are classified. The industries are assembled under seventeen main groups according to the Standard Industrial Classification.

In interpreting the statistics of individual industries it should be noted that the figures on employment, production, etc., do not refer to individual products but to all the products produced by an industry. For example, the value of production of the confectionery industry amounting to \$119,455,419 in 1956 does not imply that this was the value of confectionery produced. What it means is that the firms whose principal product was confectionery had a value of production of \$119,455,419. This figure, in addition to confectionery, includes all the subsidiary products made by these firms, such as chewing gum valued at \$10,031,150, ice cream which was valued at \$3,058,710, and bread and other bakery products valued at \$838,310. Confectionery is also produced as a subsidiary product by firms credited to other industrial classifications. The quantities and values of the principal individual commodities produced are given in Table 11. Commodities produced in small quantities are not included, but the list covers approximately 75 p.c. of total production.

Subsection 2.—Manufactures classified by Origin of Materials

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may, however, be using large quantities of imported materials.

The mineral origin group includes, in addition to non-ferrous metals so largely produced in Canada, the manufactures of iron and steel, of petroleum, and of other mineral substances, the raw materials for which are largely imported. Products of mineral origin, with the exception of fuels, are nearly all durable goods.

12.—Principal Statistics of Manufacturing Industries classified according to Origin of Materials Used, by Main Group, 1956

Origin of Material Used	Estab- lish- ments	Em- ployees	Salaries and Wages	Cost at Plant of Materials Used	Value Added by Manufacture	Selling Value of Factory Shipments
	No.	No.	\$	\$	\$	\$
Farm origin.....	9,520	314,308	895,469,715	3,288,193,503	1,960,806,742	5,299,072,621

Subsection 3.—Manufactures classified by Type of Ownership

The figures showing the classification of the type of ownership under which Canadian manufacturers operate are available from 1946, although the first survey did not include the fish curing and packing industry. Its inclusion in subsequent years has not materially altered the percentage distribution of individual ownership, incorporated companies, etc.

As is to be expected, the smaller establishments, regardless of the type of products manufactured, are carried on under individual ownership. In that category industries conducted on a small scale contain a large number of establishments, the percentage decreasing as the scale of operations increases, as the following figures for 1956 show:—

Group	Average Number of Employees per Establishment	Percentage of Individual Ownership Establishments to the Total
Wood products.....	12.2	59.0
Printing, publishing and allied industries.....	15.8	42.6
Miscellaneous manufacturing industries.....	21.5	36.1
Foods and beverages.....	22.8	45.1
Non-metallic mineral products.....	34.0	30.4
Clothing.....	35.6	26.6
Chemicals and allied products.....	46.7	15.6
Leather products.....	48.6	27.4
Iron and steel products.....	66.5	23.9
Textiles.....	73.4	30.3
Knitting mills.....	76.6	14.7
Non-ferrous metal products.....	96.5	23.4
Paper products.....	165.0	8.1
Products of petroleum and coal.....	165.3	2.8
Electrical apparatus and supplies.....	176.1	8.0
Tobacco and tobacco products.....	188.5	29.4
Transportation equipment.....	239.0	26.1
Rubber products.....	254.2	12.1
ALL GROUPS.....	37.7	41.4

Of the 37,428 establishments operating in 1956, 1,691 establishments in the periodical publishing industry were unclassifiable, leaving 35,737 establishments in the four categories of ownership. Individual ownership numbered 14,788 establishments, partnerships 4,550, incorporated companies 15,497 and co-operatives 902. The percentage distribution of the four categories of ownership is given in Table 13 for 1947-56.

13.—Percentage Distribution of Establishments in Manufacturing Industries classified by Type of Ownership, 1947-56, and by Province and Industrial Group, 1956

Miscellaneous manufacturing industries.....	36.1	12.3	51.4	0.2	100.0

¹ Four main categories of ownership only; the non-classifiable group is not included (see text above).

The establishments operating under individual ownership are not as important from the point of view of employment provided as their large numbers would indicate. According to Tables 14 and 15 these establishments, which comprise 41 p.c. of the number, had only 5 p.c. of the total employees. Partnerships accounted for 13 p.c. of the number of establishments and 3 p.c. of the total employees. Incorporated companies with 43 p.c. of the number of establishments had almost 92 p.c. of the employees. Co-operatives with 2 p.c. of the number had less than 1 p.c. of the employees.

On the basis of employment provided, incorporated companies are, by a wide margin, the most important factor in the employment field. In the petroleum and coal products group practically 100 p.c. of the employees were reported by such companies. Incorporated companies in the electrical apparatus and supplies, rubber, paper, and transportation equipment groups had 99 p.c. of the employees; chemical products group had 98 p.c.; tobacco and non-ferrous metal products groups had 97 p.c.; iron and steel products 96 p.c.; textiles mills and knitting mills 95 p.c.; non-metallic mineral products 94 p.c.; leather products 91 p.c.; miscellaneous industries 88 p.c.; printing, publishing and allied industries 87 p.c.; clothing 85 p.c.; and foods and beverages 83 p.c. Companies in the wood products group, with 76 p.c., reported the lowest proportion of total employment.

14.—Percentage Distribution of Employment in the Manufacturing Industries classified by Type of Ownership, 1947-56, and by Province and Industrial Group, 1956

Subsection 4.—Leading Manufacturing Industries

The rank of the ten leading industries in 1956, from the standpoint of selling value of factory shipments, is compared with their respective ranks in significant years since 1929 in the following statement:—

Industry	Rank in—							
	1929	1933	1939	1944	1949	1954	1955	1956

¹ Classification not comparable with 1944 and previous years.

A prominent feature of Canadian manufacturing development during this period has been the movement of non-ferrous metal smelting to one of the top three places, the advance of the primary iron and steel industry particularly since the war years and the increasing prominence of the petroleum industry. During the Second World War the industries engaged in producing the equipment needed by the Armed Forces, such as shipbuilding, aircraft, automobiles, miscellaneous chemical products, and primary iron and steel, advanced to higher positions. When the War ended, certain industries engaged in the production of consumer goods bettered their positions.

During the past few years the ranking has changed little. In 1956, as compared with 1955, primary iron and steel moved ahead of sawmills, rubber goods moved up from fourteenth place to tenth, and aircraft and parts dropped from ninth to eleventh.

16.—Principal Statistics of the Forty Leading Manufacturing Industries, ranked according to the Selling Value of Factory Shipments, 1956

Industry	Estab- lish- ments	Em- ployees	Salaries and Wages	Cost at Plant of Materials Used	Value Added by Manufacture	Selling Value of Factory Shipments

Section 3.—Principal Factors in Manufacturing Production

One of the principal factors indicating the trend of growth in manufacturing production is the amount paid as salaries and wages to various groups of employees within these industries. In past years a comprehensive study of employee earnings has appeared in this Chapter of the Year Book, supported by a number of tables detailing earnings by employee classification, by province, and by type of industry. Such statistics appear in this edition in Subsection 2 of Chapter XVII.

Subsection 1.—Capital and Repair Expenditure

The present series of statistics covering expenditure on fixed capital and repairs by manufacturing industries commences with the year 1944.

Capital expenditures by manufacturers in 1956 totalled \$487,700,000 for construction and \$906,100,000 for machinery and equipment, while \$577,800,000 went for repairs. Of the total capital expenditures, amounting to \$1,393,800,000 in 1956, 18.5 p.c. was reported by the paper products group, 11.7 p.c. by iron and steel, 10.4 p.c. by chemicals and allied products, 8.6 p.c. by non-metallic mineral products, 8.4 p.c. by products of the non-ferrous metals group, 7.8 p.c. by foods and beverages, 6.7 p.c. by petroleum and coal, 4.3 p.c. by transportation equipment, and 3.6 p.c. by the wood products group.

Of the nine groups reporting capital expenditures of \$50,000,000 or more in 1956, eight reported higher expenditures than in 1955; the petroleum and coal group showed a decrease of \$16,000,000. Of the other groups, paper products led the list with an increase of \$118,700,000, followed by chemicals and allied products with \$88,600,000, non-metallic mineral products with \$72,500,000, iron and steel with \$67,300,000, non-ferrous metal products with \$33,500,000, wood products with \$7,900,000, transportation equipment with \$6,000,000, and foods and beverages with \$5,200,000.

17.—Capital and Repair Expenditures by the Manufacturing Industries, 1947-56, and by Province and Industrial Group, 1956

¹ Includes knitting mills.

Subsection 2.—Size of Manufacturing Establishments

The size of a manufacturing establishment is generally measured either by the value of factory shipments or by the number of employees but each of these methods has its limitations. The former measure has to be adjusted for changes in the price level and, as between industries, it makes those in which the cost of raw materials is relatively high appear to operate on a larger scale. The latter takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery may lead to an increase in production concurrently with a decrease in number of employees.

Size as Measured by Selling Value of Factory Shipments.—In 1946, after heavy wartime production had ceased and reconversion had barely begun, there were 1,442 manufacturing establishments, each with an output of \$1,000,000 or over. Their combined production was valued at \$5,377,870,217 and accounted for 66.9 p.c. of the total for all manufacturing plants. By 1949, the number of factories in that category had increased to 1,926 and the proportion of their production to the total was 74.4 p.c. As a result of the tremendous industrial expansion and the increase in prices of the 1950's, the number of plants with shipments valued at over \$1,000,000 increased to 2,979 in 1956. These plants contributed 81 p.c. of the total output in that year.

18.—Manufacturing Establishments and Total and Average Production classified by Value of Product Group, 1946, 1949, 1955 and 1956

¹ In 1952 gross value of products was replaced by selling value of factory shipments.

² Includes New-foundland.

Size as Measured by Number of Employees.—In 1946 the 311 establishments employing 500 hands or over accounted for 32.3 p.c. of the total number of employees engaged in manufacturing. In 1956 there were 400 plants with more than 500 employees, 66 of them with over 1,500. The 400 plants employed 36.5 p.c. of the total workers in all manufacturing establishments.

19.—Establishments and Employees in Manufactures classified by Number of Employees per Establishment, 1946, 1949, 1955 and 1956

Size of Establishments in Leading Industries.—Table 21 shows the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the motor vehicle, non-ferrous metal smelting and refining, aircraft and parts, railway rolling-stock, pulp and paper, rubber goods, cotton yarn and cloth, primary iron and steel, and heavy electrical machinery industries. On the other hand, the degree of concentration is low in such industries as women's and men's factory clothing, furniture, butter and cheese, miscellaneous food preparations, fruit and vegetable preparations, bread and other bakery products, and sawmills.

21.—Percentage Importance of Establishments, each Employing 200 or more Persons, in the 25 Leading Industries, 1956

	Industry	Number of Establishments Employing 200 or more Persons	Percentage of Total Establishments in the Industry	Percentage of Total Shipments in the Industry

PART III.—PROVINCIAL AND LOCAL DISTRIBUTION OF MANUFACTURING PRODUCTION

Section 1.—Provincial Distribution of Manufacturing Production

This Section shows the distribution and concentration of the manufacturing industries in each province followed by a general analysis of the leading industries in the individual provinces. Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1956 amounted to \$17,277,601,319 or 80 p.c. of the total factory shipments of manufactured products. The water power and other varied resources of the two provinces and their nearness to the larger markets of Canada and the United States have contributed to this progress.

Table 1 shows the outstanding predominance of Ontario and Quebec in each industrial group. Quebec leads in the manufacture of tobacco and tobacco products, textiles and clothing and paper products. In each of the other groups Ontario has the greater production of the two provinces. In the production of wood products British Columbia, with 42 p.c. of the total, holds the dominant position, outranking both Ontario and Quebec which account for 25 and 22 p.c. respectively of the total. In each of the other groups Ontario and Quebec lead by a wide margin.

1.—Summary Statistics of Manufactures of each Province classified by Industrial Group, 1956

PRODUCTION OF MANUFACTURED GOODS BY MAJOR INDUSTRIAL GROUPS WITHIN EACH PROVINCE, 1956 SELLING VALUE OF FACTORY SHIPMENTS IN MILLIONS OF DOLLARS

Subsection 1.—The Manufactures of the Atlantic Provinces

The Atlantic Provinces are of economic importance in a number of fields, such as pulp and paper, fish processing, sawmills and primary iron and steel. In *Newfoundland* manufacturing production is dominated by the forest and fisheries resources. Pulp and paper is by far the most important industry, having shipments valued at \$68,085,288 in 1956, followed by fish processing with shipments of \$18,279,005. These two industries accounted for 70 p.c. of the total production of the province. In *Prince Edward Island* agriculture and fishing resources make butter and cheese, slaughtering and meat packing, and fish processing the leading industries. *Nova Scotia* is renowned for its coal mines, its fisheries and its extensive forests and agricultural lands; it is also favoured with easy access by sea to the high-grade iron ore supply of Newfoundland. On these resources are based the leading manufactures of primary iron and steel, fish processing, pulp and paper, shipbuilding and sawmills. In addition, an important petroleum refinery and industries producing railway rolling-stock, cotton yarn and cloth, and coke and gas add to the diversification of industry in the province. The forests of *New Brunswick* give a leading place to pulp and paper and sawmilling industries in the province. Other important manufacturing and processing activities are based on fish and agricultural resources.

Considering the Atlantic Provinces as an economic unit, pulp and paper was the leading industry in 1956 with factory shipments valued at \$191,465,894. This was followed by fish processing with \$81,202,927, primary iron and steel \$51,321,212, sawmills \$44,251,499 and railway rolling-stock \$33,758,676. These five industries accounted for 49 p.c. of the total selling value of factory shipments of the region. Other industries with shipments valued at \$10,000,000 or more were, in order of selling value of factory shipments: petroleum products, sugar refining, butter and cheese, shipbuilding, bread and other bakery products, slaughtering and meat packing, sash, door and planing mills, miscellaneous food preparations, printing and publishing, prepared stock and poultry feeds, breweries, miscellaneous iron and steel products, and coke and gas products.

In the Atlantic Provinces the program of industrial development has been more selective than in some of the other provinces. Fish processing, new sawmills, increased pulp-making capacity and the manufacture of non-metallic building materials like cement and gypsum products have accounted for well over half of the industrial growth. There are, however, a few outstanding exceptions. Two sizable defence plants have been established in *Nova Scotia*, one to repair and overhaul naval aircraft and the other to build and repair radar and related electronic equipment. Considerable development has taken place in Newfoundland. Besides plants for the manufacture of cement and gypsum wallboard and plaster, factories for producing boots and shoes, birch veneer, leather goods, industrial machinery and a leather tannery were established, thus broadening the industrial base of the province. With these exceptions, most of the developments in the Atlantic Provinces have been either small and scattered or confined to the modernization and expansion of existing facilities.

Despite the rapid development in the Atlantic Provinces since 1949, manufacturing production did not quite keep pace with the development in the more industrialized provinces of Ontario, Quebec and British Columbia. This is indicated by a slight drop in the Atlantic Provinces' share of the Canadian total from 4.5 in 1949 to 3.8 in 1956.

Up to 1952 the increase in employment in the Atlantic Provinces was about the same as for the remainder of Canada. Between 1953 and 1955, however, employment in that region declined by 6.0 p.c. while for Canada as a whole the decline was only 2.2 p.c. and in 1956 employment in the Atlantic Provinces rose by 1.5 p.c. over 1955, while Canada as a whole increased 4.2 p.c. Increased employment since 1949 reported by Newfoundland, Prince Edward Island and Nova Scotia was partially offset by a drop of 3.8 p.c. in New Brunswick, resulting in a net increase of only 2.4 p.c. for the area as compared with an increase of 15.3 p.c. for Canada as a whole. For salaries and wages paid, the increase was 49.3 p.c. as compared with 76.2 p.c. for Canada, and for selling value of factory shipments the respective increases were 46.6 p.c. and 73.2 p.c.

Not all industries shared in the advance since 1949. Fish processing showed a loss of 8.4 p.c. in value of shipments, sawmills a drop of 4.9 p.c., and shipbuilding a drop of 4.2 p.c. Most of the leading industries with shipments of \$10,000,000 or more, however, reported increases. The greatest gain of 97.4 p.c. was reported by the railway rolling-stock industry, followed by primary iron and steel with 17.8 p.c. and pulp and paper with 7.5 p.c. A notable feature of the 1956 manufacturing operations in the Atlantic Provinces was the expansion in the petroleum products industry in Nova Scotia, with a value of shipments almost double that of the previous year.

¹ Publication of these figures was authorized by the firms concerned.² Reported on a production basis.

³ Includes dairy products, n.e.s.; cement, hydraulic; gypsum products; miscellaneous food preparations; paints, varnishes and lacquers; and slaughtering and meat packing. ⁴ Includes bags, cotton and jute; fertilizers; and slaughtering and meat packing. ⁵ Includes breweries; cotton yarn and cloth; boxes and bags, paper; bridge and structural steel; wire and wire goods; aircraft and parts; railway rolling-stock; salt; coke and gas products; and petroleum products. ⁶ Includes biscuits; breweries; brass and copper; brooms, brushes and mops; cement, hydraulic; railway rolling-stock; synthetic textiles; shipbuilding; and sugar refining.

Subsection 2.—The Manufactures of Quebec

Quebec has long ranked as the second largest industrial province of Canada. The province experienced a great industrial expansion following World War II, an expansion not confined to existing industrial areas, but spreading to many towns and villages in the accessible areas of the province and into new areas in the hinterland. In 1956 its output of \$6,622,502,699 represented about 30 p.c. of Canada's total selling value of factory shipments.

Several important factors have contributed to the development of industry in Quebec. Its geographic situation is extremely favourable including as it does the great water highway of the St. Lawrence River with its excellent harbour at Montreal 800 miles inland. There is also an extensive road network linking the small rural areas to the larger industrial centres. Other significant factors include abundant natural resources in forests, water power, minerals, agricultural lands and, of even more importance, an industrious and stable population.

Quebec ranks first in available water power resources, having more than 40 p.c. of the total recorded for all Canada. Installations, approaching 8,500,000 h.p. at the end of 1956, represented more than 45 p.c. of the total for Canada.

The pulp and paper industry, with an output valued at \$617,986,499 in 1956, is Quebec's leading manufacture. The province is a principal world centre for the production of newsprint, having 55 major pulp and paper plants concentrated in the Trois Rivières and Shawinigan Falls districts, as well as along the Saguenay, Ottawa and St. Lawrence Rivers. The production of non-ferrous metals has expanded considerably during the past decade. The output of aluminum has also made impressive progress, reaching a record total of 620,321 tons in 1956. The major oil refinery district of the country has been developed in the Montreal area.

Quebec's industries are not as diversified as those of Ontario, although a number produce 50 p.c. or more of the Canadian total. Among the major industries, Quebec predominates in: tobacco products with 93.1 p.c. of the Canadian total; women's factory clothing 69.9 p.c.; cotton yarn and cloth 67.7 p.c.; men's factory clothing 56.2 p.c.; synthetic textiles and silk 51.8 p.c.; miscellaneous electrical apparatus and supplies 46.5 p.c.; non-ferrous metal smelting and refining 43.7 p.c.; pulp and paper 42.5 p.c.; railway rolling-stock 42.0 p.c.; and miscellaneous chemical products 40.3 p.c. Two industries in the medium-size classification also predominated in Quebec—leather footwear with 57.8 p.c. and medicinal and pharmaceutical preparations with 47.1 p.c. of Canadian production.

As in other provinces, the manufacturing industries of Quebec recovered in 1955 from the minor recession that occurred in 1954, and continued this recovery at an accelerated pace in 1956. All groups of the standard industrial classification reported an increase in the selling value of factory shipments. For the province as a whole the increase was 11.8 p.c. as compared with an increase of 10.9 p.c. for Canada. Employment in six of the nine groups was higher, the increase for the province being 3.9 p.c., and for Canada 4.2 p.c. Employment in the clothing group was unchanged, chemicals and allied products slightly lower, and the petroleum and coal products group reported a decline of 9.4 p.c. from the previous year.

¹ Sugar refining is also a leading industry but statistics are confidential.

Subsection 3.—The Manufactures of Ontario

Ontario, one of the world's major industrial areas, accounts for approximately half of Canada's manufacturing production. Here the proximity of raw materials, cheap hydro-electric power, and a strategic location in relation to export markets, not only on this Continent but overseas, have been the decisive factors of development. Most of the manufactures and most of the population are located in the southern area of the province, which has the inestimable advantage of bordering on the St. Lawrence-Great Lakes waterway system, giving access westward to the heart of the Continent and eastward to the shipping routes of the world. Furthermore, this same waterway is also the source of most of Ontario's developed hydro-electric power. Many new industrial areas are being created as new industries and branch plants of established industries are increasingly being located in the smaller towns.

Despite the great industrial progress made by other provinces, Ontario continues to maintain its predominance and in 1956 produced 49 p.c. of the nation's manufactured goods. Steel ingot capacity is increasing. Huge investments have gone into the construction of plants in Sarnia for a whole group of new products based on Alberta oil flowing through the interprovincial pipeline from Edmonton. Significant developments have taken place in synthetic rubber, synthetic textiles, and industrial and consumer chemicals, and plants for their processing have been built in the vicinity of Sarnia and along the lower reaches of the St. Lawrence River between Cornwall and Kingston. Ontario has continued to gain in such traditional lines as motor vehicles, industrial and farm machinery, and the manufacture of household equipment, business and office machinery, and electrical apparatus and supplies. The province has the greatest diversification of manufacturing production in Canada. Certain industries, such as the manufacture of motor vehicles and their parts, heavy electrical machinery, agricultural implements, machine tools, starch and glucose, bicycles, and the processing of raw tobacco are carried on practically in this province alone. Of the forty leading industries in Canada in 1956, a substantial number were dominated by Ontario's share of the total production. These industries, with the percentage which the production of each bears to that of the 1956 Canada totals are: motor vehicles 98.8 p.c., motor vehicle parts 95.4 p.c., heavy electrical machinery 89.7 p.c., rubber goods 81.5 p.c., primary iron and steel 78.1 p.c., telecommunication equipment 76.7 p.c., iron castings 71.9 p.c., fruit and vegetable preparations 67.4 p.c., sheet metal products 59.7 p.c., wire and wire goods 58.4 p.c., aircraft and parts 58.1 p.c., industrial machinery 57.4 p.c., printing and bookbinding 57.3 p.c., brass and copper products 55.1 p.c., miscellaneous chemical products 54.6 p.c., acids, alkalies and salts 53.0 p.c., paper boxes and bags 52.0 p.c., and miscellaneous electrical apparatus 50.6 p.c.

There are also a number of medium-sized industries with a total Canadian production of over \$100,000,000 in which Ontario dominated: agricultural implements with 90.5 p.c., soaps and washing compounds 88.5 p.c., household and office machinery 80.0 p.c., refrigerators, vacuum cleaners, etc., 79.6 p.c., hardware, tools and cutlery 72.8 p.c., heating and cooking apparatus 68.7 p.c., and confectionery 57.2 p.c.

The manufacturing industries of Ontario produced the highest selling value of factory shipments on record in 1956, amounting to \$10,655,098,620, an increase of 10.8 p.c. over the previous year. Accompanying this increase in shipments was an increase of 4.5 p.c. in the number of persons employed which totalled 641,190 in 1956.

Subsection 4.—The Manufactures of the Prairie Provinces

In the Prairie Provinces the leading industries have traditionally been those based on agricultural resources—grain-growing, cattle-raising and dairying areas. But recently slaughtering and meat packing has emerged as the major industry followed very closely by petroleum products. The latter industry has made tremendous strides in the Prairie Provinces since 1949 and now ranks highest in terms of selling value of factory shipments in both Alberta and Saskatchewan and second in Manitoba. It has increased its proportion of the total manufacturing production of the Prairie Provinces from 8.5 p.c. in 1949 to

16.5 p.c. in 1956. Next in importance generally are flour mills and dairy products followed by industries providing for the more essential needs of the resident population, such as the baking of bread, printing and publishing, etc. In Manitoba, the early commercial centre of the Prairie Provinces, water power, forest and, more recently, mineral resources have given rise to a diversification of industrial production. The extensive railway services require large shops for the maintenance of rolling-stock, especially in the Winnipeg area. In Saskatchewan, while the main economic role continues to be played by agriculture, the production of petroleum products has taken first place in selling value of factory shipments.

The Prairie Provinces are not so well endowed with water power resources as the more highly industrialized provinces of Quebec, Ontario and British Columbia, but the recent development of oil and gas will permit the economical generation of all thermal power necessary for industrial development in the mid-western region.

In the Prairie Provinces the nature of development varies from one province to another. Alberta, with its expanding oil and gas industries, has moved to the forefront, especially since 1950. Chemicals, particularly petrochemicals, have made striking gains, and now embrace various rayon intermediates and polythene plastics, as well as fertilizers and the manufacture of other new inorganic products like caustic soda and chlorine. Agriculture-based products still rank high in the province, as do structural materials such as steel, concrete products and hydraulic cement. Sizable gains have also been made by the expansion of food-processing plants.

Manitoba, next to Alberta in value of shipments, experienced great development in manufacturing production during the War and postwar periods although, percentage-wise, it did not keep pace with the other two Prairie Provinces. The change has been largely one of emphasis rather than magnitude—that emphasis moving from production of food and clothing to production of goods of mineral origin such as iron and steel, non-metallic mineral products, and products of petroleum and coal.

Developments in Saskatchewan have continued along more or less traditional lines. The largest gains in shipments have been recorded by the food processing industries and a substantial increase has also been shown by the building materials group, which includes non-metallic mineral products and lumber. However, the largest single gain in employment has been in the refining of oil for local use.

Considering the Prairie Provinces as an economic unit, 4,303 manufacturing establishments reporting in 1956 furnished employment to 91,149 persons who received \$290,384,459 in salaries and wages. They shipped goods valued at the factory at \$1,648,781,413 and spent \$956,034,201 for materials.

¹ Reported on a production basis.² Includes aircraft and parts; bridge and structural steel work; cement, hydraulic; gypsum products; non-ferrous metal smelting and refining; primary iron and steel; and sugar refining.³ Non-ferrous metal smelting and refining is also a leading industry. Statistics, however, are confidential since there are fewer than three firms reporting.⁴ Includes fertilizers; non-ferrous metal smelting and refining; primary plastics; railway rolling-stock; and sugar refining.

Subsection 5.—The Manufactures of British Columbia

British Columbia, with factory shipments totalling \$1,859,368,466 in 1956, ranked third among the provinces in manufacturing production. This province increased its share of the total Canadian output from 7.1 p.c. in 1939 to 8.6 p.c. in 1956.

Forest resources, fisheries, minerals and electric power have given a broad base and wide diversification to its industrial development. The sawmilling industry ranked first in 1956 and pulp and paper second. British Columbia holds the dominant position among the provinces in the production of wood products, its output making up 42 p.c. of the Canadian total. Third in importance was the petroleum products industry which moved up from seventh place in 1953 as a result of the completion of the Trans Mountain oil pipeline. The province also accounted for approximately 48 p.c. of the output of the nation's fish processing industry in 1956 and is mainly responsible for Canada's position as the major fish exporting nation in the world.

A feature of recent progress has been that new developments are taking place in areas far removed from accepted industrial centres. A new railway cutting diagonally across the province from south to north has opened up the formerly locked interior of the province. Factories and plants in remote sections are drawing greater value in employment and dollars from natural resources. The growth of the province industrially may be indicated by the increase in employment, two and one-half times the prewar figure. In dollar terms, gross value of manufacturing has increased 650 p.c. since 1939. The consumption of 6,500,000,000 kwh. of electric power by manufacturers during 1956 marked a steady upward climb of 200 p.c. in the past decade.

British Columbia ranks second among the provinces in available water power resources and its hydraulic development, which at the end of 1956 totalled 2,566,460 h.p. out of a Canadian total of 18,403,048 h.p., was exceeded only by Quebec and Ontario.

The manufacturing industries of British Columbia expanded during 1954, at a time when the remainder of Canada experienced a minor recession, and continued to expand during 1956. In the latter year the number of employees was 15.7 p.c. higher than in 1953 and the value of factory shipments was 36.0 p.c. higher, compared with 1.9 p.c. and 21.7 p.c. respectively for Canada as a whole.

¹ Reported on a production basis.² Non-ferrous metal smelting and refining is also a leading industry; statistics, however, are confidential since there are fewer than three firms reporting.

Section 2.—Manufacturing Industries in Urban Centres

The prosperity of most of the cities and towns of Canada, especially in Eastern Canada, is intimately connected with their manufacturing industries, which provide employment for a large proportion of the labour forces.

Table 8 indicates the extent to which the manufacturing industries are concentrated in urban centres and shows, by province, the proportion of the selling value of factory shipments contributed by cities and towns having shipments of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns accounted for 78 p.c. and 94 p.c., respectively, of the total manufactures of those provinces in 1956, while in the Atlantic Provinces and British Columbia, where sawmilling, fish packing and dairying are leading industries, the proportions were 69 p.c. and 49 p.c., respectively. In the Prairie Provinces, manufacturing is confined largely to a few urban centres.

A noticeable trend towards the decentralization of industry is apparent in all provinces but the most striking change has been shown by Ontario where there has been a recent tendency to establish new industry in smaller urban centres and where many new one-industry areas have been opened up. For Canada as a whole the percentage of manufactures accounted for by urban centres having shipments of over \$1,000,000 was 85.8 in 1954 but dropped to 79.8 by 1956.

8.—Urban Centres, each with Selling Value of Factory Shipments of Over \$1,000,000, Number of Establishments and Total Shipments in these Centres as a Percentage of the Provincial Total, by Province, 1956, and Totals for Canada, 1954-56.

NOTE.—Statistics published in this table are sometimes higher than the figures published in Table 11, pp. 671-673, since the table below includes statistics of towns with fewer than three establishments and production of over \$1,000,000 each. It is not possible to publish this information in Table 11 without disclosing the operations of individual establishments.

Province or Territory	Urban Centres with Value of Factory Shipments of over \$1,000,000 each	Establishments Reporting in Urban Centres with Value of Factory Shipments of over \$1,000,000	Selling Value of Factory Shipments of Urban Centres having \$1,000,000 or over	Selling Value of Factory Shipments of each Province	Selling Value of Factory Shipments of Urban Centres as a Percentage of Shipments in each Province

¹ Net value is derived from gross value by deducting cost of materials, fuel and electricity. In 1952 gross value of products was replaced by selling value of factory shipments; see text on p. 626.

CHAPTER XV.—CAPITAL EXPENDITURES, CONSTRUCTION AND HOUSING

CONSPECTUS

	PAGE		PAGE
SECTION 1. CAPITAL EXPENDITURES ON CON- STRUCTION AND ON MACHINERY AND EQUIPMENT.....	674	Subsection 2. Contracts Awarded and Building Permits Issued.....	690
SECTION 2. THE CONSTRUCTION INDUSTRY...	683	SECTION 3. HOUSING.....	696
Subsection 1. Value of Construction Work Performed.....	683	Subsection 1. Government Aid to House- Building.....	696
		Subsection 2. Housing Development in 1958.....	700

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

This Chapter provides data on the capital expenditures made by all sectors of the Canadian economy on construction and on machinery and equipment, together with summaries of other available statistics for the construction industry. Section 1 describes the purpose of capital expenditures and shows the amounts spent by each of the various industrial or economic sectors. Section 2 brings together a number of summaries of related series on construction activity: value of work performed by type of structure, value of materials used, salaries and wages paid and numbers employed, contracts awarded and building permits issued. Construction of dwelling units and government aid to house-building is covered in Section 3.

Section 1.—Capital Expenditures on Construction and on Machinery and Equipment*

One of the most noticeable aspects of Canada's recent economic growth has been the very high rate of capital investment. In the postwar years capital outlays have absorbed on average approximately one-fifth of the Gross National Product, the 1957 proportion being 27 p.c. Since 1946, new investment by all sectors of the economy has amounted to approximately \$59,000,000,000; each year except 1954 recorded an increase. In 1946 capital expenditures made on new construction, machinery and equipment amounted to \$1,703,000,000; in 1957 they reached the record total of \$8,721,000,000. Estimates for 1958 show a moderate decline from the 1957 high.

Although the growth of secondary industry and attempts by all levels of government to meet the growing demands for social capital have been important, the principal impetus of the postwar capital boom has been provided by the natural resources sector, especially the mineral, forest and power-generating industries.

The primary mining sector of the economy has undergone tremendous growth in the postwar period. In terms of output it has increased in size more than fourfold; in terms of new investment the growth has been even more impressive. Capital expenditures increased each year from \$27,000,000 in 1946 to \$585,000,000 in 1957. It is during this period that

* Information is given in greater detail in the Department of Trade and Commerce annual report *Private and Public Investment in Canada*.

the great developments have taken place in the oil and gas, uranium and iron ore industries, necessitating tremendous expenditures on new construction and equipment. To the heavy expenditures of the past two years may be added those of the nickel industry.

1.—Capital Expenditures on Construction and on Machinery and Equipment, 1929-58

NOTE.—Actual expenditures 1929-56; preliminary actual 1957; intentions 1958.

¹ Newfoundland included from 1949.

The rate of annual investment in the manufacturing industries has also increased fourfold since 1946. Within this period, however, there has been considerable year-to-year fluctuation in the amounts invested. Substantial increases took place in 1947, 1951 and 1952, followed by a sharp decline in 1954. Increases occurred again in 1955 and 1956, particularly in the latter year. The investment pattern of some of the smaller industries has deviated widely from the group trend but among the major industries only petroleum and coal products showed any substantial variation. In this industry a sizable increase in capital spending was recorded in 1954, but a decline occurred in 1955.

Of the industries that make up the manufacturing group, pulp and paper is by far the most important. After the War, the demand for the products of this industry began to climb and continued strong during most of the postwar period. As a result, new investment rose steadily, reaching in 1957 a level about 19 times as high as the war-year average. The investment programs in the industry have been typically large-scale, involving mainly the building and equipping of pulp, paper or combined pulp and paper mills. Considerable outlays were also made for modernizing and expanding mills already in operation. Three new mills came into operation in 1957, one each in Ontario, Alberta and British Columbia.

Of particular significance in industrial pace-setting was the rapid expansion of the iron and steel industry. The extension of steel-making facilities that had taken place during the War formed the basis for greater expansion in the postwar period. Basic steel-making capacity rose from less than 2,500,000 tons annually to 3,600,000 during the war years and by the beginning of 1957 amounted to 4,300,000 tons. Old blast furnaces and open hearths were rebuilt and enlarged and several large new units added. The introduction in 1954 of a new oxygen steel-making process also contributed appreciably to raising production efficiency. At the same time, substantial progress was made in increasing the productive capacities of other steel-processing facilities, including the automation of many operations at the rolling-mill level. There are now a number of

fully mechanized strip mills and cold-rolling mills capable of producing lighter and finer quality strips and sheets. New and improved facilities for the production of galvanized sheets, tinplate and various special alloy steels have added to the variety of products.

Undoubtedly, the most rapid build-up of capital facilities within the manufacturing group took place in the petroleum products industry. In the five-year period preceding 1951, capital expenditures in the petroleum, natural gas and coal products industry averaged less than \$30,000,000 annually; from 1951 onward they have run close to \$100,000,000 a year. Consequent upon the plentiful supply of low-cost petroleum and natural gas has been the establishment of a fast-growing petrochemical industry in Canada. From a small wartime start of two plants—one at Calgary in Alberta and the other at Sarnia in Ontario—the industry now comprises over two dozen plants and has an annual production valued at over \$160,000,000.

Capital investment by public utilities has recorded a much higher rate of growth than has capital investment in manufacturing industries, especially in recent years. New investment by public utilities during the period 1946-57 amounted to about \$12,400,000,000. Each year, except 1954 and 1955, recorded increases, particularly 1956 and 1957. Nearly half the capital investment in utilities was in central electric stations; growing demand for electric power, coincident with Canada's industrial development, led to increasingly large outlays for the erecting and equipping of new power-generating plants and the expansion of existing installations. Numerous hydro-electric power plants have been constructed ranging in capacity from a few hundred to more than 1,000,000 h.p.; installed hydro-electric capacity has about doubled in the postwar period.

The construction of gas and oil pipeline mileage has called for heavy expenditure. In the earlier postwar years capital outlays by pipeline companies were insignificant, averaging less than \$3,000,000 a year from 1946 to 1949. However, the principal oil pipeline projects were started in 1950 and the major gas pipelines in 1956, so that expenditures have remained high throughout that period. New investment in gas-distributing facilities has accompanied the extension of gas pipelines; in the ten-year period 1946-55, new investment in such facilities averaged \$9,000,000 a year but in 1957 it was \$70,500,000 and in 1958, \$82,300,000.

Capital outlays by railroads have been directed more towards increasing efficiency and speed of service than towards increasing track mileage. However, several new railways have been built recently, mainly to link new resource developments with main lines. Capital expenditures by the telephone group have increased in each year since 1946 with the exception of 1950—the number of telephones in use has more than doubled and mechanical and technical advances have been made to improve service.

Generally speaking, the service industries—trade, financial and commercial services—have kept pace with the rising level of private and public investment. In 1957, capital investment by these industries amounted to \$857,000,000—nearly four times the 1946 total. Although this increase reflects considerable growth of the industries concerned, capital outlays by the group represented only about 8 p.c. of total new investment in the economy. Expenditures by institutions represented somewhat less than 4.5 p.c. of total new investment since 1946, the larger part of it going into educational institutions followed in order by hospitals and churches.

The importance in the Canadian economy of capital expenditures on housing is indicated by the fact that the value of new dwelling units built since 1946 has been close to one-third of the total value of new construction during the period. The amount spent on new houses, including those financed with government assistance, increased each year from 1946 to 1956, declined slightly in 1957 mainly because of financing difficulties, and

increased again to reach a record high in 1958. Action by the Federal Government in 1957 and early 1958 making available, under the National Housing Act, funds to finance the construction of homes and rental units for low and moderate income families and the easing of the conditions under which NHA loans are granted, contributed to the house-building activity in 1958.

A slight decline in total new investment is anticipated for 1958. Private investment is expected to be down about 11.5 p.c. The entire western world had, by 1957, reached a stage where substantial over-capacity existed for a number of basic products and until world demand grows sufficiently to match these new levels of productive capacity, a decline in the rate of investment in Canada's basic industries can be expected. Investment in most utilities should be maintained at high levels with only a slight decline for the group as a whole. Investment in commercial, merchandising and service groups shows differing trends—the financial sector shows signs of advancing slightly but trade and commercial services will decline moderately. However, the weakening in the private sector will be largely offset by greater spending in the non-business group, particularly on residential building. Institutional investment has still a large backlog to make up and higher levels of activity are anticipated for 1958. Direct government investment is expected to increase

appreciably; many federal, provincial and municipal projects, postponed during recent years when demand for business capital was heavy, can now be carried out. In the aggregate, investment in the non-business sector of the economy is expected to exceed that of 1957 by about 14 p.c. For the economy as a whole, capital investment on new construction, machinery and equipment in 1958 is estimated at about \$8,520,000,000, a decrease of 2.3 p.c. from the peak investment year of 1957.

2.—Summary of Capital and Repair Expenditures, by Economic Sector, 1956-58

A summary of the capital expenditures in each province for the years 1956-58 is given in Table 4. Such expenditures represent gross additions to the capital stock of the province and are a reflection of economic activity in that area, but the actual production of these assets may generate its major employment in income-giving effects in other regions. For example, the spending of millions of dollars on oil refineries and pipelines in Western Canada means activity in the steel industries of Ontario as well as construction activity in the Prairie Provinces.

4.—Capital and Repair Expenditures, by Province, 1956-58

¹ Includes the Yukon and Northwest Territories.

² Slight differences between these totals and those of Table 2 are caused by minor adjustments and rounding of figures.

Section 2.—The Construction Industry

Subsection 1.—Value of Construction Work Performed

Statistics of the construction industry are based largely on information received at the same time and from the same sources as the data on capital expenditures which appear in Section 1.* The data represent the estimated total value of all new and repair construction performed by contractors; labour forces of utility, manufacturing, mining and logging firms; and by government departments, home-owner builders and other persons or firms not primarily engaged in the construction industry.

Canada's intended construction program for 1958 is estimated at \$7,136,000,000, about 1.2 p.c. above the 1957 level. This contrasts with a rise in 1957 of more than 10 p.c. over 1956 and an increase of 20 p.c. in 1956 over 1955. New construction in 1958, estimated at \$5,991,000,000, is expected to account for most of the increase. The value of repairs to be undertaken in that year is estimated at \$1,145,000,000.

5.—Value of Construction Work Performed, Current and Constant (1949) Dollars, 1949-58

NOTE.—Actual expenditures 1949-56; preliminary actual 1957; intentions 1958.

(Millions of dollars)

Principal statistics of the construction industry are shown by province and for contractors, utilities, governments and others in Table 10. The statistics given for Canada as a whole may be considered as relatively accurate but those for individual provinces and by class of builder are approximations only. All estimates given for cost of materials used are based on ratios of this item to total value of work performed, derived from annual surveys of construction work and applied to the total value-of-work figures. Estimates of labour content are similarly based but in addition are adjusted to include working owners and partners and their withdrawals. Although the ratios were calculated in some detail by type of industry, still further refinements are required. There are also some difficulties in obtaining the precise location of projects undertaken or to be undertaken by large companies operating in a number of provinces. However, if used with these qualifications in mind, the table provides useful estimates.

10.—Labour Content, Cost of Materials and Value of Work Performed In Construction, by Province and by Employer, 1954-58

NOTE.—Actual expenditures 1954-56; preliminary actual 1957; intentions 1958.

Subsection 2.—Contracts Awarded and Building Permits Issued

In this Subsection statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only so far as the work thus provided for is completed and duly reported in the capital expenditure surveys. Further, values of contracts awarded, and especially of building permits, are estimates (more often under-estimates) of work to be done.

11.—Value of Construction Contracts Awarded, 1923-58

Table 14 shows the value of building permits issued in 14 metropolitan areas across Canada. In 1957 the permits issued in these areas made up 93 p.c. of the total for the 204 municipalities.

14.—Estimated Value of Building Permits Issued in Metropolitan Areas, 1956 and 1957

Metropolitan Area	1956	1957	Metropolitan Area	1956	1957
	\$'000	\$'000		\$'000	\$'000

Tables 15 and 16 show the value and volume of building permits by province. These figures are useful when appraising the construction activity within and among municipalities. Comparisons of construction costs would not be warranted, however, without assurance that structures of similar size and quality were being compared. Despite limited application, this information constitutes one of the few indices of current economic activity in smaller localities.

The relative material was compiled from municipal figures and therefore varies with the terms of individual by-laws, with the methods of estimating the value of local construction and with other factors which may differ from area to area. Information is not available on the permits allowed to lapse without the relative construction being undertaken.

¹ Provincial totals do not add to the Canada totals because of rounding of the figures and because certain minor adjustments could not be distributed provincially.

The indexes given in Table 17 show as far as possible the fluctuations in building costs and their effect upon construction work and employment. The relative proportions of material and wage costs in general building are difficult to determine since such proportions vary with the type of building and the centres studied.

Section 3.—Housing*

Subsection 1.—Government Aid to House-Building

Federal Government Assistance.—The Federal Government's main activities in the housing field are defined by the National Housing Act, 1954, and subsequent amendments. These activities are administered by Central Mortgage and Housing Corporation, a Crown agency established by Act of Parliament in December 1945. The Minister of Public Works is responsible to Parliament for the implementation of the Government's housing policy and the President of the Corporation reports to the Minister.

Under the National Housing Act, the main financial assistance for new housing is provided through a system of mortgage loan insurance for private house-building. The Federal Government may also join with provincial governments in undertaking public housing projects. In addition, Central Mortgage and Housing Corporation may carry out construction on its own account or on behalf of other government departments and agencies. Public assistance in the housing field is also provided under the Canadian Farm Loan Act, 1927, the Veterans' Land Act, 1942, and the Farm Improvement Loans Act, 1944.

The Federal Government policy has been to stimulate and supplement the market for housing but not to assume direct responsibilities which constitutionally belong to other levels of government, or which can be effectively borne by private enterprise. This principle has been followed since the Federal Government first entered the housing field in 1919. Under the War Measures Act of 1918, the Government made \$25,000,000 available to provincial governments for loans for housing. The provincial governments, in turn, lent the money to municipalities for moderate-cost housing. About 6,000 dwelling units were constructed under this provision. In the Dominion Housing Act of 1935, and in the succeeding National Housing Acts of 1938 and 1944, the main assistance was given through a system of joint lending under which the Federal Government and the private lending institutions shared the loans on the basis of one-quarter and three-quarters, respectively. Under these three Acts, 240,500 dwellings were financed through loans amounting to \$1,466,569,000. In 1954, a new Housing Act was passed under which the joint loan technique was discontinued and mortgage loan insurance was introduced, with the loan wholly advanced by the private lender. To the end of 1958, under the insured loan and other provisions of the 1954 Act, 280,436 dwellings have been financed in loans totalling \$2,797,600,000. In recent years nearly one-half of the housing built in Canada has been assisted by the Federal Government, either directly or indirectly.

* Prepared in the Information Division, Central Mortgage and Housing Corporation, Ottawa.

Insured Mortgage Loans.—On behalf of the Federal Government, the Central Mortgage and Housing Corporation insures loans made by approved lenders to assist in the financing of new house construction for either home ownership or rental. The chartered banks, most of the life insurance companies and a number of other private financial institutions have been approved as lenders under the Act. The borrower pays an insurance fee which is remitted by the lender to the Corporation and paid into a mortgage insurance fund. When claims are made on the fund, the Corporation will pay the approved lender 98 p.c. of the aggregate of the principal owing on the mortgage, approved borrower's charges and interest, together with an acquisition fee of \$125 and approved taxable legal disbursements.

For home ownership, the loan may be 90 p.c. of the first \$12,000 of lending value, plus 70 p.c. of the remainder. The total loan may not exceed \$12,800. For rental housing, the loan is limited to 80 p.c. of the lending value and the maximum amount of the loan is prescribed by Order in Council for the varying types of dwellings. The repayment periods and the loan proportions are prescribed in the National Housing Act. The usual term of an insured mortgage loan is 25 years, although for home ownership loans it may be 30 years. The maximum interest rate for loans, established by Order in Council, was set at 6 p.c. in January 1957. The interest rate may not exceed the rate on long-term Federal Government bonds by more than $2\frac{1}{2}$ p.c. at the time it is set.

The Act requires the Corporation to determine lending values of properties, to prescribe standards of construction and to perform compliance inspections during construction. These and other administrative arrangements are set out in the National Housing Loan Regulations established by Order in Council. To the end of 1958, loans totalling \$2,135,890,000 had financed 211,516 dwellings under the insurance provisions of the 1954 Act.

Direct Corporation Loans.—The National Housing Act authorizes the Corporation to make direct loans in certain cases. (1) With the approval of the Governor in Council, the Corporation may make a direct loan to a limited-dividend housing company for the construction of low-rental housing. Such loans may be up to 90 p.c. of the lending value and may be repayable over a period of up to 50 years. The interest rate is established by Order in Council and is restricted to a rate not exceeding the rate on long-term Federal Government bonds plus $\frac{1}{2}$ of 1 p.c. Between 1946 and the end of 1958, loans to limited-dividend housing companies were approved for over 21,745 units, amounting to \$154,912,000. Over 3,000 of these units were constructed specifically for elderly persons. (2) Loans may be made by the Corporation where ordinary loans are not available from approved lenders. At present, home-owner applicants in centres of less than 55,000 population who are unable to obtain loans from a private approved lender may obtain direct loans from the Corporation subject to the same terms and conditions as insured loans. Subject to limitations which place the houses in the small homes category, home-owner or merchant-builder applicants may obtain direct loans in any area regardless of population if loans are not available from private lenders. Direct loans are also available to defence workers, to veterans building under the Veterans' Land Act, and to co-operative building societies. Direct loans financed 32,588 dwellings between 1949 and the end of 1958, loans totalling \$312,229,000. (3) The Act authorizes the Corporation to make loans to a company engaged in mining, lumbering, logging or fishing for the construction of moderate-cost rental housing. Although no primary industry loans have been made recently, between 1946 and mid-1957 loans were approved for 916 dwellings in the amount of almost \$7,000,000.

In addition to making direct loans, the Corporation may also supply money to private lenders acting as agents to make loans on behalf of the Government. Arrangements for making such loans were in effect between September 1957 and April 1958. In 1957, agency loans were approved for 16,346 units amounting to \$158,000,000, and in 1958 for approximately 11,300 units totalling \$118,558,000.

Purchase and Sale of Mortgages.—The National Housing Act provides that any person or company may purchase insured mortgages provided the mortgage is continuously administered by an approved lender. Approximately 17,000 insured mortgages, totalling \$178,600,000, had been sold by lenders to the end of 1958. The majority of these insured mortgages were bought by pension funds. The Corporation is authorized to buy and sell mortgage loans under both the National Housing Act and the Central Mortgage and Housing Corporation Act, but there has been little activity under these provisions.

Home Improvement Loans.—Under the National Housing Act, the Central Mortgage and Housing Corporation may provide insurance to banks and instalment credit agencies for loans made for the improvement of existing homes. An insurance fee paid by the borrower is deposited in an insurance fund maintained by the Corporation. The Act prescribes the forms of security, the limit of loans upon individual properties, and the term of the loan. By the end of 1958, almost 123,000 loans for alterations, repairs and additions had been approved for a total amount of \$128,900,000.

Federal-Provincial Projects.—The Act provides that where the Federal Government and a provincial government enter into a partnership agreement, the Corporation may undertake jointly with the province the development of a housing or land-assembly project. Capital costs, profits and losses of such projects are shared—75 p.c. by the Federal Government and 25 p.c. by the province, or jointly by the province and a municipality. Under this legislation two main types of project are involved: construction of housing units for rental on either an economic or a subsidized basis; and the assembly and servicing of residential lots for sale. The Act also provides for the construction of housing for sale but no projects of this type have yet been undertaken. To the end of 1958, agreements had been made for the construction of 8,200 dwelling units. To the end of 1958, agreements were made for the assembly and servicing of 15,100 lots. Lots serviced and sold totalled 6,161 at the end of 1958.

Urban Redevelopment.—The Act also provides that, where a municipality undertakes to acquire and clear a blighted or substandard area, a federal grant may be made to the municipality up to one-half the cost of acquisition and clearance. The area may be used for housing or other suitable purposes in accordance with an over-all plan, but it must be substantially residential, either before or after redevelopment. The Corporation receives a share of the revenue from the project proportionate to the contributions made. Grants have been authorized to assist four municipalities in the redevelopment of a total of 122 substandard acres, and by the end of 1958 grants totalling some \$9,000,000 had been approved.

Construction Activities.—The Corporation may carry out construction on its own account or on behalf of other federal departments and agencies. Projects have been constructed for the Departments of National Defence, Public Works, and also for Atomic Energy of Canada Limited. It also arranges and supervises construction of federal-provincial projects. The Corporation built and owns a substantial number of houses at Gander Townsite in Newfoundland, most of which are occupied by Department of Transport employees. Since 1950, total expenditures on these construction activities have amounted to over \$500,000,000.

Research and Community Planning.—The Corporation is responsible for undertaking investigations into housing conditions, for sponsoring technical research and for the distribution of information leading to the improvement of housing accommodation and the adoption of community plans. The Act provides that the Government can make funds available to the Corporation for these purposes and that, by Order in Council, a grant may be made to a municipality, to an educational or research institution or to an individual. Between 1946 and 1958, expenditures of \$1,912,000 had been made for these purposes apart from regular Corporation activities. This includes grants to 16 municipalities to assist in a study of housing conditions and the need for redevelopment.

Guarantees.—Under certain conditions the Corporation is authorized, for a premium, to guarantee returns of private investors from moderate rental housing projects. There has been no activity in this sector in recent years but between 1948 and 1955, projects were approved involving 21,700 dwellings having an estimated cost of \$164,600,000.

The Corporation is authorized to offer guarantees to life insurance companies for low-cost or moderate-cost rental housing projects, or to institutional investors for land development. There has been no activity under this provision in recent years.

A section of the Act authorizes the Corporation to offer purchase guarantees to builders. This has also been inoperative in recent years except for guarantees offered in respect of housing for defence workers.

Other Legislation.—The Canadian Farm Loan Act, 1927, provides for federal long-term loan assistance for farm housing and for other farm purposes. The Veterans' Land Act, 1942, administered by the Department of Veterans Affairs, provides loan and grant assistance to veterans for housing and other purposes. The Farm Improvement Loans Act, 1944, provides for guarantees for intermediate-term and short-term loans made by approved lending agencies to farmers for housing and other purposes.

Provincial Assistance.—All provinces except Prince Edward Island have passed complementary legislation to provide for federal-provincial partnership arrangements for the assembly of land and the construction of low-rent housing as provided in the National Housing Act. Several provinces have also passed other housing legislation.

In *Quebec*, the Act to Improve Housing Conditions (S.Q. 1948, c. 6) and an amendment (S.Q. 1951-52, c. 7) authorize the province to pay a subsidy on interest charges in excess of 3 p.c. on new dwellings. A further amendment (S.Q. 1957-58) increases authorized expenditures under the Act to \$80,000,000.

In *Ontario* the Housing Development Amendment Act (S.O. 1952, c. 39) authorizes the province and a municipality to enter into joint housing projects. Under certain conditions the province may expropriate land in municipalities for the purpose of housing projects. The Planning Amendment Act (S.O. 1952, c. 75) permits municipalities with an approved official plan to designate an area within the municipality as a redevelopment area and to acquire land in that area and clear and prepare it for residential, commercial, industrial or other designated purpose. The Rural Housing Assistance Act (S.O. 1952, c. 92) authorizes the establishment of the Rural Housing Finance Corporation, a Crown company, to provide financial assistance in the building of new houses in villages and rural areas. The Corporation may lend money independently or in co-operation with CMHC or with any approved lending institution. The Junior Farmer Establishment Act (S.O. 1952, c. 45) establishes the Ontario Junior Farmer Establishment Loan Corporation, which assists young farmers in buying, developing and operating farms. The Corporation may make loans for the construction and improvement of farm houses. The loans, not to exceed \$15,000, are repayable in 25 years and are secured by a first mortgage on the property. The Elderly Persons Housing Aid Act (S.O. 1952, c. 27) authorizes the province to make grants to any limited-dividend housing project obtaining a loan under the NHA. The legislation provides for grants amounting to \$500 for each dwelling or 50 p.c. of capital cost in excess of the loan, whichever is the lesser.

Manitoba provides capital grants under the Elderly Persons Housing Act (S.M. 1956, c. 14) and subsequent amendments, to assist limited-dividend housing companies. The legislation provides for grants of 20 p.c. of construction cost up to a maximum of \$1,000 for a two-person unit and \$700 for a one-person unit. This grant may be used to purchase furnishings and fixtures for the housing units.

Saskatchewan assists limited-dividend projects for the elderly under the Housing Act (R.S.S. 1953, c. 246) and subsequent amendments, with capital grants up to 20 p.c. of the total capital cost.

British Columbia assists limited-dividend projects for the elderly under the Elderly Citizens' Housing Aid Act (S.B.C. 1955, c. 19). Capital grants not exceeding one-third of the total cost of the project may be made.

Subsection 2.—Housing Development in 1958

House-Building.—During 1958 house-building activity in Canada was at a higher rate than ever before — 164,600 new houses started compared with 122,300 in 1957 and 138,300 in 1955, the previous record year. Dwellings completed totalled 146,700 in 1958, an increase of 25 p.c. over 1957. In 1957, 117,300 dwellings were completed and in 1956, the previous high for completions, the total was 135,700. At the end of 1958, there were 88,200 units under construction.

Most of the increase in starts during 1958 took place in the 13 metropolitan areas of over 100,000 population. In these centres the increase was 49 p.c. over 1957 while in the smaller urban centres the increase was 38 p.c. and in other areas 12 p.c.

Single-family units made up 64 p.c. of the dwellings started in 1958, an increase of 26 p.c. over 1957. Rental dwellings accounted for slightly less than 29 p.c. of the new dwellings started in this period but the relative increase was much greater, exceeding 1957 by about 68 p.c.

Corresponding with the record production, expenditures on new residential construction totalled \$1,782,000,000 in 1958, a figure \$352,000 higher than in the previous year. Demand was sufficient to absorb most of the new construction and there was a record sale of new homes, reflecting in some measure the high rate of family formation in 1957 which reached a record net level of 103,600. The number of marriages in 1958 is expected to be about the same as in 1957 but a reduction in immigration will result in a smaller number of new families for that year, possibly as much as a 25-p.c. decline.

Mortgage Lending.—In the first few months of 1958, mortgage lending was at a higher rate than ever before and a substantial part of this activity was financed with public funds in loans from CMHC. Early in the second quarter, however, private mortgage funds became more plentiful and direct lending dropped sharply. Lending activity remained at a high level throughout the year although there was a relative decline in mid-summer. Thereafter activity increased and in the third quarter lending under the National Housing Act was 92 p.c. higher and conventional institutional lending for new houses 15 p.c. higher than in the corresponding period of 1957.

During 1958, mortgage loan approvals for new housing totalled \$1,199,000,000, exceeding approvals for any previous year. Private lending institutions approved \$810,000,000; of this total \$291,000,000 was in conventional loans and \$519,000,000

in NHA insured loans. The chartered bank approvals totalled \$300,000,000, approximately \$127,000,000 more than 1957. The total includes \$389,000,000 in public funds approved under the agency and direct loans by CMHC. The increase of \$395,000,000 in activity under the National Housing Act over 1957 was shared 60 p.c. by private lenders and 40 p.c. by CMHC.

In May 1958, Parliament voted an additional \$350,000,000 to be used by CMHC primarily for direct lending. This, with the December 1957 vote of \$150,000,000 brought to a total of \$750,000,000 the funds made available to CMHC for its direct lending and related activities. When the agency arrangement for placing direct funds was terminated, the residual direct lending facilities of CMHC were extended to borrowers and areas previously excluded. Loans made under this expanded policy are subject to size limitations which place them in the small homes category. In all, CMHC financed 36,453 new dwellings in 1958 through residual and other direct lending facilities.

A small market in insured mortgages continued to operate in 1958; 4,384 mortgages amounting to over \$47,700,000 were sold.

Borrowers' Incomes and Costs.—The median income of all borrowers under the National Housing Act in 1958 was lower at \$5,325 than in 1957 at \$5,478. This resulted mainly from the large volume of CMHC lending through the Small Home Loans arrangement under which funds were directed into the lower-cost housing market. There was, however, a significant difference between the incomes of borrowers under the Small Home Loans arrangement and the incomes of other borrowers under the Act. In 1958 the median income of borrowers under the Small Home Loans arrangement was \$4,907, while for other borrowers it was \$5,565.

The average borrower under the Small Home Loans arrangement bought a house costing \$13,350 on which he made a down payment of \$2,412. For borrowers of other loans under the Act, the average dwelling cost \$14,916, and the down payment was \$3,485. These down payments were lower than those of 1957 while the debt service ratios were higher. Both changes were largely the result of the higher loan amounts authorized when the National Housing Act was amended in December 1957.

For bungalows built under the National Housing Act, the average construction cost per square foot in 1958, at \$10.56, was 15 cents higher than in 1957. The corresponding increases in 1956 and 1957 were 41 cents and 19 cents, respectively. This lower rate of increase was partly the result of a slight decline in the prices of building materials. The price index of these materials dropped from 128.4 in 1957 to 127.3 in 1958.

A decline in the sizes of dwellings was sufficient to offset the increased construction costs per square foot so that total construction costs per unit were virtually unchanged. However, land costs continued to rise, averaging \$2,471 in 1958 compared to \$2,260 in 1957. As a result, the total average cost of single-family dwellings financed under the Act in 1958, at \$14,475, was \$200 higher than in 1957. Under the Small Home Loans arrangement the average dwelling cost was \$13,403 compared with \$15,069 for other dwellings financed under the Act.

The houses financed under the Act in 1958 were, on the average, smaller than those of 1957, down from 1,137 to 1,118 sq. feet. Under the Small Home Loans arrangement the average size was 1,041 sq. feet compared to 1,161 sq. feet for other NHA-financed dwellings.

Low Rental Projects.—Included in the direct lending activities of CMHC are loans made to limited-dividend housing companies for low-rental housing. During 1958 loans were approved for 6,282 such dwellings. A substantial number were designed especially for old persons, including the 405-unit development sponsored by the Corporation of Metropolitan Toronto. Public housing built under joint federal-provincial partnerships was occupied by 5,391 families at the end of 1958 and 1,265 more dwellings were under construction. Almost half of the occupied dwellings were rented at levels which will recover capital costs and current operating expenses. In just over half the dwellings the

rents are related to tenant family income and size and any deficiency in revenue from the project is met by the federal-provincial partnership in the 75/25 p.c. proportion in which the capital costs were borne. Thirty-seven municipalities have initiated public housing projects ranging in size from ten dwellings to the 732 and 1,042 dwellings in the Toronto Regent Park South and Lawrence Heights developments. Construction was commenced late in the autumn on the 800-unit development replacing substandard housing in a 20-acre redevelopment area in Montreal.

City Development.—The administration of urban growth is the concern of provincial and municipal governments and many of the provinces have passed planning Acts which endeavour to guide the orderly development of communities. The number of urban centres employing professional staff qualified in town planning is increasing steadily. The Federal Government's activity has been directed generally toward the stimulation of house-building and has been made mainly in the form of loans or guarantees to privately initiated housing. The National Housing Act, however, directs CMHC to promote the improvement of housing and living conditions. Dwellings financed under the Act are required to meet certain standards based on concepts of health and social amenities. Land subdividers are assisted and encouraged in utilizing land to the best advantage in arranging housing layouts. The Corporation assists such organizations as the Community Planning Association of Canada and the Canadian Housing Design Council, which promote the improvement of urban planning and the design of new houses. Grants are also made for the investigation of technical improvements in housing and for advanced studies in related fields.

In many cities there are areas of decay and blight. Over half a million dwellings in Canada are between 50 and 75 years old and over 350,000 are more than 75 years old. Many have deteriorated through lack of care and overcrowding, others when built were below desirable standards. Most of this housing is concentrated in the older central parts of cities. Many city patterns have become obsolete and no longer serve transportation needs adequately. Some of the blight will be removed by private redevelopment but this may pass over large areas and private interests lack the powers needed to effect over-all planning. Federal Government assistance in meeting the cost of acquiring and clearing areas for redevelopment is available to municipalities. Grants of over \$5,000,000 have been authorized for the acquisition and clearance of blighted areas in Toronto, Ont., St. John's, Nfld., Montreal, Que., and Halifax, N.S., totalling approximately 107 acres. The redeveloped areas are being used mainly for public housing but may be used for other purposes if the former residents are rehoused elsewhere. The cleared areas in Halifax will be used for commercial purposes, and a public housing development where the former residents may obtain accommodation is taking place in another part of the city. Studies of housing conditions and the need for redevelopment are being carried out in eleven cities with the assistance of federal grants of some \$180,000.

CHAPTER XVI.—SURVEY OF PRODUCTION*

CONSPECTUS

	PAGE		PAGE
SECTION 1. INDUSTRIAL DISTRIBUTION OF PRODUCTION.....	707	SECTION 3. PER CAPITA VALUE OF PRODUCTION	713
SECTION 2. PROVINCIAL DISTRIBUTION OF PRODUCTION.....	710		

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The scope of the Survey of Production is limited to industries chiefly engaged in the production of commodities, the term "production" applying to such processes as the growing of crops, the mining of metals and other minerals, the catching of fish, the conversion of falling water into electric energy, the construction of buildings and the manufacturing and processing of goods. The activities of the transportation, communications, trade, finance and service industries are excluded, except as certain of their costs are indirectly reflected in the value of output of commodity-producing industries. This is in contrast to the scope of the widely used Gross National Product series (*see* Chapter XXIII) which encompasses all industries.

The "net" value of production, or "value added" is generally considered the most significant measure of production, since in assessing the contribution of each industry to the total it is essential that inter-industry duplication be eliminated. Value added is computed by deducting from the total value of output (excluding indirect taxes) for each industry, the cost of materials, fuels, purchased electricity and process supplies consumed in the production process.

The measurement of value added is similar to although not strictly comparable with the concept involved in the contribution of each industry to the gross domestic product at factor cost (net income originating plus depreciation). The main difference is that value added, as computed for each commodity-producing industry, includes the cost of such services as insurance, advertising, communications, etc., which originate in the non-commodity-producing industries. In national income accounting, the contribution of these services to gross national product is classified with the non-commodity-producing group. For instance, the cost of insurance incurred by manufacturers is included in the net value of the manufacturing industry in the Survey of Production series but is not included in the contribution of manufacturing to the gross national product. Thus the measurement of the value of output based on value added contains a certain amount of duplication and the figures for the industrial groups are always higher than those given in the National Accounts series.

One of the major advantages of the Commodity-Production series is that the statistics may be classified by provinces. With the exception of personal income and its major components, the geographical distribution of gross national product is not available mainly because profits cannot be allocated according to the provinces in which they are generated by productive activity. A more detailed explanation of the series and the conceptual and classification differences as compared with the Gross National Income series is given in DBS Bulletin *Survey of Production 1926-1956* (Catalogue No. 61-202).

* Prepared in the Business Statistics Section, Research and Development Division, Dominion Bureau of Statistics.

The record of value added statistics, by province, for the eight commodity-producing industry groups has been revised recently. Figures for six of the industries are extended back to 1926 but because data for forestry and construction are not available on a comparable basis prior to 1935, the complete record by industry and by province covers only the period 1935-56. The 1949-56 totals include Newfoundland's production for forestry, mining, electric power, construction and manufacturing; trapping is included from 1952 and fisheries from 1951.

The statistics given in the following Sections supersede those published in previous Year Books.

Section 1.—Industrial Distribution of Production

Analysis of Commodity Production 1946-56.—In the period 1946-56 inclusive the total net value of commodity production rose by 163 p.c. Sustained demand for consumer goods both at home and abroad, the industrial and resource development programs and the expansion of defence industries all contributed to the advance. Increases were recorded in this period in all industrial groups except trapping.

The net value of agricultural production in 1956 was estimated at \$2,059,000,000, 35 p.c. higher than in 1946, although well below the levels of 1951 and 1952. After a low point in 1954, larger-than-average wheat crops in the two succeeding years accounted for the recovery in 1956. The net value of forestry operations reached almost \$762,000,000, the highest ever recorded and 125 p.c. above the level of 1946. Net value of the primary fisheries production also surpassed its previous peak in 1951; it amounted to nearly \$106,000,000, a figure 58 p.c. above the value for 1946. The quantity of sea fish landed in 1956 was the largest on record and prices of fishery products also reached a new high level. Net value of output in the trapping industry fluctuated considerably over the ten-year period and in 1956 was considerably below that of most earlier years.

In the period under review mining as a whole showed the greatest increase of all the primary industries in net value of production; production was estimated at \$1,224,000,000 in 1956, 280 p.c. above the value in 1946. In terms of physical volume, fuel production advanced by 377 p.c. in the 1946-56 comparison, petroleum output recording a level 23 times that of 1946. The volume of metal mining gained 106 p.c. over the period and production of non-metals rose by 94 p.c. The installed capacity of electric power generating plants increased by 167 p.c. between 1946 and 1956, the gain in terms of net value of production being 169 p.c.

Except for a slight decline in 1954, the net value of manufacturing production rose steadily throughout the period to a total of \$9,605,000,000 in 1956, 177 p.c. above the 1946 total; the value of non-durable manufactures advanced by 141 p.c. and the value of durables by 232 p.c. In the non-durable grouping, fuel products recorded an increase of 519 p.c., by far the largest advance over the review period. The printing and publishing industry nearly tripled its value of output, paper products showed an increase of 172 p.c. and chemical products an increase of 167 p.c. Foods and beverages, tobacco products and rubber products all recorded gains of more than 100 p.c.

All industry groups among the durable manufactures showed large advances over the review period. Net-value of output of non-ferrous metal products advanced 350 p.c. and electrical apparatus and supplies 344 p.c. Non-metallic mineral products rose 241 p.c., the transportation equipment group 224 p.c., the iron and steel products group 210 p.c. and wood products 150 p.c. The total net value of durable manufactures accounted for over 47 p.c. of manufacturing value added in 1956 as compared with less than 40 p.c. ten years earlier.

The construction industry showed the largest proportionate gain of all the major commodity industries in the 1946-56 comparison; the net value rose from \$751,000,000 in 1946 to \$3,344,000,000 in 1956, an increase of 345 p.c. Greatly increased activity in house and all other types of building, together with a substantial increase in construction

costs, was responsible for this advance. Investment in new construction in 1956 amounted to \$4,115,000,000, more than five times the 1946 total, with non-residential construction showing the largest gain.

During the 1946-56 period, the net value of the secondary industries (manufacturing and construction) increased proportionately much more than that of the primary industries. As a result, their contribution to total net value of production rose from 63 p.c. in 1946 to 73 p.c. in 1956. The principal factor in this change was the large gain in the net value of construction which accounted for nearly 19 p.c. of the total in 1956 as compared with only 11 p.c. in 1946. The share of manufacturing rose from 52 p.c. to 54 p.c. in the same comparison.

The contribution of the primary industries to the total declined from 37 p.c. to 27 p.c. during the period but the entire drop in relative importance was accounted for by the decrease in the contribution of agriculture from 23 p.c. in 1946 to 12 p.c. in 1956.

1.—Net Value of Production, by Industry, Specific Years 1946-56

NOTE.—Net production represents total value under a particular heading, less the cost of materials, fuel, purchased electricity and supplies consumed in the production process. Data for fisheries and trapping represent total value.

Totals	69.4	112.3	151.1	162.8	182.8	100.0	100.0	100.0	100.0	100.0

Recent Trends.—The net value of Canadian commodity production during 1956 at \$17,706,000,000 was 12 p.c. above the 1955 total. While all industries except trapping shared in the advance of \$1,936,000,000, manufacturing and construction accounted for 74 p.c. of it and the primary industries for the remainder.

This large increase in value of production reflected the vigorous program of expansion that began in mid-1954 and continued to the end of 1956, highlighted by the great expansion in consumer expenditure and residential construction and the greatly enlarged scale of business investment in plant and equipment accompanied by substantial building-up of business inventories.

In 1957 recessionary factors resulted in a levelling-off in the rate of increase of commodity output; preliminary data indicate only a slight increase in the aggregate net value. A decline of 24 p.c. occurred in the value of agricultural production reflecting the substantial reduction in output of grains in the western provinces. The forestry and fisheries industries also showed sizable declines in production, but mining and electric power recorded further advances over the high levels of 1956. On the whole, a moderate increase was estimated in the net value of the manufacturing industry in 1957, but it was more than accounted for by higher prices since the volume of output was about 2 p.c. lower than in 1956. The construction industry, however, showed a gain of about 11 p.c. over the preceding year; a decline in residential building was more than offset by a higher average level of other types of construction.

Advance data suggest that the value of commodity production for 1958 was little changed from 1957. While the net values of the agriculture and construction industries were higher, declines occurred in the manufacturing and mining industries.

Section 2.—Provincial Distribution of Production

All provinces and territories showed large increases in net value of production over the 1946-56 period. The greatest proportionate gains were recorded by British Columbia and Alberta, amounting to 206 p.c. and 191 p.c., respectively. The economies of Ontario and Quebec also developed rapidly during the period; the value of net output in Ontario rose by 180 p.c. and in Quebec by 154 p.c. The other provinces and the territories showed more moderate gains.

3.—Net Value of Production, by Province, Specific Years 1946-56

Nors.—Figures for 1950 and 1953 have been revised since the publication of the 1957-58 edition as a result of changes in the forestry item.

with British Columbia.

² Construction figures for the Yukon and Northwest Territories are included

Newfoundland.—In 1956, the net value of commodity production in Newfoundland, exclusive of agriculture, amounted to over \$212,000,000 or about 1.2 p.c. of the Canadian total. The manufactures group, composed mainly of the large pulp and paper and fish processing industries, accounted for nearly 30 p.c. of the provincial total. Mining accounted for over 24 p.c. reflecting the active exploitation of the province's large iron, zinc and lead deposits. Construction was active in Newfoundland as elsewhere in Canada and also accounted for nearly 24 p.c. of the net value of commodity output; forestry and fisheries were next in importance.

Prince Edward Island.—The economy of this island province is predominantly agricultural, farm output accounting for over 43 p.c. of the net value of production in 1956. Construction represented 27 p.c. and, together with manufacturing, contributed the bulk of the non-farm output. The province's net value of production advanced by 92 p.c. between 1946 and 1956 and in the latter year represented 0.2 p.c. of the Canadian total.

Nova Scotia.—In 1956 the net value of commodity production in Nova Scotia accounted for a little more than 2 p.c. of the total for Canada. The province's manufacturing industries—the most important of which are primary iron and steel, shipbuilding, pulp and paper and fish processing—represented 42 p.c. of its net output, and construction 23 p.c. Mining, particularly of coal, is Nova Scotia's main primary industry, and in 1956 represented over 13 p.c. of the value of provincial output. Agriculture and fisheries are both important to the provincial economy, each accounting for nearly 7 p.c. In the 1946-56 period, the net value of commodity production in the province increased by 90 p.c.

New Brunswick.—New Brunswick's share of the Canadian net value of production was 1.8 p.c. in 1956 being estimated for that year at \$319,000,000. The large pulp and paper industry together with sawmilling, shipbuilding and fish processing gives manufacturing the lead in the activities of the province. In 1956 manufactures accounted for more than 39 p.c. of the total net value of production and construction accounted for nearly 25 p.c. Forestry was the principal primary industry, contributing 14 p.c. of the total, and agriculture followed with 11 p.c. New Brunswick's value of commodity output advanced by 91 p.c. in the 1946-56 period.

Quebec.—In 1956, the net value of production in Quebec at \$4,544,000,000 represented nearly 26 p.c. of the total for Canada. Manufacturing was by far the leading group, accounting for nearly 64 p.c. of the province's net commodity output. Pulp and paper alone contributed about 11 p.c. of the net factory output and smelting and refining and the manufacture of clothing, textiles, petroleum products and electrical apparatus and supplies also ranked high among Quebec's manufacturing industries. The contribution of the construction industry was 16.7 p.c. in 1956 but agriculture accounted for only 5.5 p.c. Over the 1946-56 period the net value of commodity production in Quebec recorded an advance of 154 p.c.

Ontario.—Net commodity production in Ontario rose from \$2,530,000,000 in 1946 to \$7,072,000,000 in 1956, a gain of 180 p.c. This province accounted for 40 p.c. of the Canadian total in the latter year. The economy of Ontario, like that of Quebec, is largely dominated by manufacturing which has represented from 68 to 70 p.c. of the provincial net value of output in recent years. Manufacturing industries in which value added exceeded \$100,000,000 in 1956 were, in order of importance: motor vehicles, primary iron and steel, smelting and refining, pulp and paper, rubber products, heavy electrical machinery, motor vehicle parts, petroleum products and aircraft and parts. Construction accounted for nearly 16 p.c. of the provincial total in 1956 and agriculture about 7 p.c.

Manitoba.—The net value of commodity production in Manitoba advanced from \$360,000,000 in 1946 to \$687,000,000 in 1956, or by 91 p.c. Its contribution to the Canadian aggregate, however, declined from 5.3 p.c. to 3.9 p.c. over the period. Manufacturing is now the principal activity in the province, accounting for nearly 40 p.c. of the total net value in 1956, with slaughtering and meat packing, petroleum products and railway rolling-stock the leading industries. Agriculture, consisting predominantly of the production of grain and livestock, contributed only 27 p.c. of the provincial total in that year as compared with 45 p.c. in 1946. Construction has risen sharply in recent years and in 1956 accounted for 23 p.c. of the total net value of production.

Saskatchewan.—The economy of Saskatchewan is largely dependent on agriculture. A larger-than-average wheat crop combined with substantial increases in construction and mining raised the total net value of Saskatchewan's commodity output to a record \$1,031,000,000 in 1956, almost double the 1946 total. Even so, the province's share of the total Canadian net value of production dropped to 5.8 p.c. in 1956 from 7.7 p.c. ten years earlier. In 1956 agriculture accounted for over 59 p.c. of the net value of provincial output, construction for 19 p.c. and manufacturing for 11 p.c. The leading manufacturing industries were petroleum products, slaughtering and meat packing, flour milling, brewing, and butter and cheese; the leading mineral products were copper and uranium.

Alberta.—The net value of commodity production in Alberta was \$1,510,000,000 in 1956, 191 p.c. higher than in 1946, and the province's contribution to the Canadian aggregate advanced from 7.7 p.c. to 8.5 p.c. during the period. In this comparison, agriculture declined in relative importance, accounting for only 26 p.c. of the provincial total in 1956 as compared with 58 p.c. in 1946. The net value of the mining industry, however, rose from 9 p.c. to 25 p.c. of the total, accounted for almost entirely by an increase in petroleum output.

Manufacturing production also advanced steadily and in 1956 was valued at \$286,000,000 or about 19 p.c. of the provincial net aggregate. Petroleum refining, slaughtering and meat packing, brewing, printing and publishing, and sawmilling were the major manufacturing industries. The net value of construction, which accounted for about 12 p.c. of the provincial total in 1946, contributed 27 p.c. in 1956.

British Columbia.—In 1956 the net value of commodity production in British Columbia amounted to \$1,878,000,000. This was a gain of 206 p.c. over 1946 and was the highest percentage increase recorded by any province during the review period, when the province's contribution to the Canadian aggregate rose from 9.1 p.c. to 10.6 p.c.

Manufacturing accounted for 44 p.c. of the provincial total net value of output in 1956, sawmilling and pulp and paper contributed the major share although smelting and refining, the manufacture of petroleum products, and fish processing were also of importance. Construction accounted for over 25 p.c. of the provincial aggregate and forestry for nearly 16 p.c. The contribution of the mining industry fell below 6 p.c. in 1956.

¹ Construction figures for the Yukon and Northwest Territories are included with British Columbia.

² Excludes agriculture.

Section 3.—Per Capita Value of Production

Between 1946 and 1956, the gain of 160 p.c. in the total net value of commodity production (excluding Newfoundland) was accompanied by an increase of 27 p.c. in population. During the period, net value of production per capita more than doubled, advancing from \$547 to \$1,117. At the same time, wholesale prices rose by 62 p.c., indicating a substantial increase in 'real' commodity production per head of population.

Per capita net value of output in the Maritime Provinces has always been far below the Canadian average; in 1956 it was \$547, slightly less than half the national figure, compared with a standing of 40 p.c. below the Canadian average in 1946. Quebec's per capita production, which was 10 p.c. below the national figure in 1946, was 12 p.c. below the 1956 average. On the other hand, per capita net value of output in Ontario at \$1,309 was 17 p.c. above the Canadian average. Although Ontario had ranked first in per capita output in most previous years, that province dropped to third place in 1956.

Manitoba's production per head of population was well below the national average throughout the 1946-56 period; at \$808 in 1956 it was nearly 28 p.c. lower. The per capita figure for Saskatchewan, which fluctuates widely with crop conditions, was 5 p.c. above the Canadian average in 1956, after falling 30 p.c. below it two years earlier. In recent years, Alberta has shown a consistently high per capita output and in 1956 ranked first among the provinces with a value per head of \$1,345, over 20 p.c. above the Canadian average. British Columbia ranked second in this comparison with a figure of \$1,336, also about 20 p.c. above the national average.

6.—Per Capita Net Value of Production with Percentage Variation from the National Average, by Province, Specific Years 1946-56

NOTE.—Figures for 1950 and 1953 have been revised since the publication of the 1957-58 edition as a result of changes in the forestry item.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—The Government in Relation to Labour

Subsection 1.—Federal Labour Legislation

The federal Department of Labour was established in 1900 under the Conciliation Act which provided machinery to aid in preventing and settling labour disputes and required the Department to collect, compile and publish statistical and other relevant information. The Department also assumed the administration of the Fair Wages Policy adopted in the same year for the protection of workmen employed in the execution of Federal Government contracts and on works aided by grants from public funds.

The statutory duty of disseminating information concerning labour and industrial matters is set out in the Department of Labour Act passed in 1909. In addition the Minister is responsible for the administration of the following statutes: Conciliation and Labour Act (1906); Government Annuities Act (1908)†; Government Employees Compensation Act (1918); Fair Wages and Hours of Labour Act (1935); Unemployment Insurance Act (1940); Vocational Training Co-ordination Act (1942); Reinstatement in Civil Employment Act (1946); Merchant Seamen Compensation Act (1946); Industrial Relations and Disputes Investigation Act (1948); Canada Fair Employment Practices Act (1953); Female Employees Equal Pay Act (1956); and the Annual Vacations Act (1958).

Fair Wages Policy.—The Fair Wages Policy applying to all Federal Government contracts was first set forth in a Resolution of the House of Commons (1900) and later incorporated in an Order in Council and amended from time to time. Wages and hours on contracts for construction are now regulated by the Fair Wages and Hours of Labour

* Except as otherwise noted, this Chapter has been revised under the direction of A. H. Brown, Deputy Minister, Department of Labour, Ottawa.

† Statistics and details of administration under this Act are given at pp. 265-267.

Act and Order in Council P.C. 2029 of Dec. 22, 1954. Hours of work on construction contracts are limited to eight per day and 44 per week, except in an emergency or in exceptional circumstances where exemption is granted by Order in Council; wages to be paid are those current for the type of work in the district or, if there are no current rates, fair and reasonable rates as determined by the Minister of Labour.

Wages and hours of work on contracts for equipment and supplies are also regulated by Order in Council P.C. 2029. The hours of such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable hours. The wages must be current or fair and reasonable but in no event shall they be less than those established by statute or regulation of the province in which the work is being performed. This Order in Council contains a clause prohibiting discrimination against any person in matters of employment because of that person's race, national origin, colour or religion, or because he has made a complaint or given information with respect to such alleged discrimination.

*Government Prevailing Rate Employees.**—Many departments and agencies of government employ non-office workers in public buildings, defence establishments, parks and forests, experimental farms, canal operation, airports and government vessels, survey parties, special projects, etc. Such positions are exempt from the operations of the Civil Service Act and rates of pay are fixed by the Treasury Board in consultation with the Department of Labour on the basis of prevailing private industry rates for comparable work in the employment area. Data used in the determination of these pay rates are secured from wage surveys made by Industrial Relations Officers of the Department of Labour and wage research conducted by the Economics and Research Branch as well as from collective agreements and information supplied by some provincial Departments of Labour.

The Fair Wages and Prevailing Rates Division of the Industrial Relations Branch also recommends rates of pay for 3,700 commissionaires employed by various government departments and agencies throughout Canada, provides wage data to assist certain Crown corporations in the preparation of their wage schedules, and gives assistance in the establishment of class titles, job descriptions and the application of job evaluation techniques.

Three sets of comprehensive Regulations have been established by the Treasury Board governing the hours of work, overtime, vacations, statutory holidays, sick leave, pensions, etc., for (1) prevailing rate workers generally employed, (2) ships' officers and (3) ships' crews.

The Industrial Relations and Disputes Investigation Act.—This legislation came into effect by proclamation on Sept. 1, 1948, revoking the Wartime Labour Relations Regulations in effect since March 1944 and repealing the Industrial Disputes Investigation Act which had been in force from 1907 until suspended by the Wartime Regulations in 1944. The Act protects proceedings commenced and decisions, orders and certifications made under the wartime legislation in so far as these involve services authorized by the Act.

The Act applies only to industries within federal jurisdiction, viz., navigation, shipping, interprovincial railways, canals, telegraphs, steamship lines and ferries, both international and interprovincial, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or of two or more provinces. However, the Act provides that provincial authorities if they so desire may enact similar legislation for application to employees within provincial jurisdiction and make mutually satisfactory arrangements with the Federal Government for the administration of such legislation by the federal authorities.

In general, the Act in its important features provides that employees and employers shall have the right to organize and bargain collectively and that trade unions may be certified as bargaining agents for employee groups. Trade unions and employers are required,

* Statistics on numbers and earnings of prevailing rate and other groups of federal employees exempt from the Civil Service Act are given at pp. 118-125.

upon notice, to bargain collectively in good faith. The Act provides for invoking collective bargaining negotiations and for the mediation of conciliation officers and conciliation boards in reaching collective agreements. Employees may change bargaining agents at times under conditions specified in the Act which also prescribes conditions affecting the duration and renewal of collective agreements. Collective agreements are required to contain provision for the arbitration of disputes concerning the meaning or violation of such agreements and where such provision is lacking application may be made for its establishment. The Act prohibits unfair labour practices, i.e., the interference with or domination of trade unions by employers or interference, discrimination and coercion in trade union activity. The conditions that must be observed prior to strike and lockout action are provided for in the Act. Industrial inquiry commissions may be appointed to investigate industrial matters or disputes.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the provisions affecting the appointment of conciliation officers, conciliation boards, industrial inquiry commissions, consent to prosecute, and complaints that the Act has been violated or that a party has failed to bargain in good faith.

The Canada Labour Relations Board administers provisions concerning the certification of bargaining agents, the writing of a procedure into a collective agreement for the final settlement of disputes concerning the meaning or violation of such agreement, and the investigation of complaints made to the Minister that a party has failed to bargain collectively.

Detailed statistics concerning activities under the Act may be found in the Annual Report of the Department of Labour. In brief, from Sept. 1, 1948, to Mar. 31, 1958, the Canada Labour Relations Board received 866 applications for certification, 541 of which were granted, 158 rejected, 160 withdrawn and seven were pending at the end of the period. Of the 537 industrial disputes dealt with under the conciliation provisions of the Act, 432 were settled by conciliation officers and conciliation boards, 44 were not settled, 11 lapsed and 50 were pending at Mar. 31, 1958.

Labour-Management Co-operation Service.—During World War II, production committees based on the principle of joint consultation between labour and management were established in many vital industries. Since 1947 the establishment of labour-management production committees in industry has been encouraged and assisted by the Labour-Management Co-operation Service, a section of the Industrial Relations Branch of the Department of Labour. The number of active committees has grown from 526 in 1947 to approximately 1,450. Their activities are directed towards such objects as better understanding between management and labour, improved production efficiency, improved quality, reduction of waste, accident prevention, good housekeeping, and reduction of absenteeism.

Reinstatement in Civil Employment Act.—This Act provides for the reinstatement in their civil employment of discharged members of the Armed Forces and other designated persons. It was originally passed in 1942 and revised in 1946 and is administered by the Minister of Labour through the Unemployment Insurance Commission. In 1954, by the Veterans Benefit Act, the Act was made applicable to certain ex-members of the Special Force and to former members of the regular Forces who had served for a period not exceeding three years after July 5, 1950, and prior to July 1, 1955.

Canada Fair Employment Practices Act.—This Act, which came into effect on July 1, 1953, prohibits discrimination in employment based on race, colour, religion or national origin. It applies only to industries within federal jurisdiction—those covered by the Industrial Relations and Disputes Investigation Act (*see* p. 716). This law prohibits acts of discrimination by employers; discrimination by trade unions in regard to membership or employment; the use by employers of employment agencies which practise discrimination; and of advertisements or inquiries in connection with employment which express, directly or indirectly, any limitation, specification or preference as to race, colour, religion or national origin.

Female Employees Equal Pay Act.—This Act came into effect on Oct. 1, 1956, and applies to employers and employees engaged in works, undertakings or businesses coming within federal jurisdiction. The Act, in its principal provision, prohibits an employer from employing a female for any work at a rate of pay that is less than the rate at which a male is employed by that employer for identical or substantially identical work.

Annual Vacations Act.—This Act was passed in January 1958 and became effective by proclamation on Oct. 1, 1958. It provides a one-week vacation with pay for the first year of employment and a two-week vacation for subsequent years. Vacation pay is computed at 2 p.c. of wages, as defined in the Act, for a vacation of one week and 4 p.c. for a vacation of two weeks.

Subsection 2.—Provincial Labour Legislation

Labour legislation in Canada is mainly a matter for the provincial legislatures as it usually deals with the contract of service between employer and employee, the contract between members of a trade union which forms the basis of the union, or regulates conditions in local work places. The right to contract is a civil right and the British North America Act, which distributes legislative powers between the Parliament of Canada and the provincial legislatures, grants to the provinces power to enact laws in relation to "civil rights" and, with certain exceptions, "local works and undertakings". In each province a Department of Labour (in Alberta, the Department of Industries and Labour) is charged with the administration of labour laws. Legislation for the protection of miners is administered by departments dealing with mines.

Factory legislation and shops legislation in several of the provinces prohibit child labour, regulate the hours of work of women and young persons and provide for safety and health. Most provinces have minimum wage legislation and maximum hours laws, legislation to ensure freedom of association, to promote collective bargaining and to provide for the settlement of industrial disputes, and legislation dealing with apprenticeship and the licensing of certain classes of workmen. The Industrial Standards Acts of Nova Scotia, New Brunswick, Ontario and Saskatchewan, the Labour Act of Alberta and the Fair Wage Act of Manitoba enable the wages and hours of work agreed upon at a conference of representatives of employers and employees in designated trades to be made the minimum standards throughout the trade concerned. The Quebec Collective Agreement Act permits collective agreements between employers and trade unions to be made binding on all in the industry. The workmen's compensation law in each province is administered by a board appointed by the Lieutenant-Governor in Council.

Provincial labour legislation enacted in 1958 is outlined in the following paragraphs.

Newfoundland.—An amendment to the *Workmen's Compensation Act* empowered the Workmen's Compensation Board to spend up to \$25,000 annually to provide disabled workmen with necessary academic or vocational training.

Prince Edward Island.—The *Trade Union Act* was amended to set out a procedure under which either the bargaining agent or the employer may, by notice, require the other to meet for negotiation of a collective agreement after a union has been certified. Where notice to negotiate has been given, the certified bargaining agent and the employer must, within 15 days from the date of notice or such time as both parties have agreed upon, meet and commence bargaining and make every effort to conclude an agreement. Provision was also made, for the first time, authorizing the Minister of Labour, on the request of either party or on his own discretion, to instruct a conciliation officer to assist the parties to conclude an agreement.

An amendment to the *Workmen's Compensation Act* increased the maximum annual earnings on which compensation is based from \$2,700 to \$3,000. The maximum monthly amount payable to a widow and children was increased from \$130 to \$170, enabling compensation to be paid in respect of a maximum of six children.

Nova Scotia.—The *Vacation Pay Act* which came into force on Jan. 1, 1959, provides, for the first time, for an annual vacation with pay of one week for all employees in the province, except independent contractors, domestic servants and persons employed in farming, lumbering and commercial fishing. A vacation stamp system is provided for workers in the construction industry who are not employed regularly by one employer. The vacation pay to be granted is 2 p.c. of the employee's earnings.

New Brunswick.—The *Vacation Pay Act*, passed in 1954 to provide for an annual vacation with pay of one week for workers in the mining and construction industry, was extended effective from June 30, 1958, to cover fish, fruit and vegetable packers.

An amendment to the *Workmen's Compensation Act* increased the rate of compensation for disability from 70 to 75 p.c. of earnings. The Legislature also authorized the Workmen's Compensation Board to spend an increased amount for rehabilitation—\$50,000 a year instead of \$15,000. All widows' pensions being paid according to the lower scales of benefits were raised to the current level of \$50 a month, effective from June 1, 1958.

An amendment to the *Trades Examination Act*, which provides for the examination and certification of tradesmen in certain building trades on a voluntary basis, added the motor vehicle repair (mechanical) trade to the trades covered by the Act.

Ontario.—The *Labour Relations Act* was amended to provide that where a collective agreement is for a term of not more than two years, application for a change in the bargaining agent may be made only during the last two months of its operation. Where the agreement is for a term of more than two years, application may be made during the twenty-third and twenty-fourth months of its operation or during the two months preceding any anniversary date or the two months preceding the termination of the agreement.

The *Trench Excavators Protection Act* passed in 1954 was amended to provide that a trench must be inspected at least once in each eight-hour period as long as any person is working in or near the trench.

An amendment to the *Workmen's Compensation Act* raised the lump sum payable to the widow immediately on the death of the workman from \$200 to \$300. The allowance for burial expenses was also increased from \$200 to \$300.

Manitoba.—An amendment to the *Labour Relations Act* makes the Act, with some modifications, applicable to specified Crown corporations. The amendment sets up a special procedure for dealing with disputes involving employees of Crown corporations after a conciliation officer has tried and failed to effect a settlement. Employees of Crown corporations are prohibited from going on strike where the Lieutenant-Governor in Council has declared that uninterrupted operations are "essential to the health and well-being of the people of the province, or of some of them". The Corporations brought under the Act are: Manitoba Power Commission, the Manitoba Telephone Commission, the Manitoba Hydro-Electric Board, the Winnipeg Electric Company and the Liquor Control Commission and their employees.

An amendment to the *Workmen's Compensation Act* raises compensation to a widow from \$50 to \$65 a month and that of a child living with the widow from \$20 to \$25 a month. This applies to all widows and children receiving compensation regardless of the date on which the death of the workman occurred.

Saskatchewan.—The *Annual Holidays Act* was amended to increase the minimum annual vacation with pay to three weeks each year after five years of service with one employer. For employees with less than five years of service but with at least one year, the vacation with pay remains at two weeks.

The *Hours of Work Act* was amended to authorize the Lieutenant-Governor in Council to issue regulations applicable to any class of employment limiting working time in any one day to 12 hours. The Act does not set absolute limits on hours of work, but provides that time and one-half must be paid for work after eight hours in a day and 44 hours in a week.

British Columbia.—The application of the *Semi-monthly Payment of Wages Act* was extended by Order in Council in December 1957 to a number of service industries and occupations, wholesale and retail trade, the transportation and taxi-cab industry, and office occupations. The Act previously covered the mining, manufacturing, construction, fishing, and hotel and catering industries, and the outside employees of municipal corporations. It requires employees to be paid, at least as often as semi-monthly, wages earned up to a day not more than eight days prior to date of payment. It covers only employees earning less than \$4,000 under a yearly contract.

Regulations of Wages and Hours of Labour under Industrial Standards Legislation and the Quebec Collective Agreement Act.—The Industrial Standards Acts of Nova Scotia, New Brunswick, Ontario and Saskatchewan and the Labour Act of Alberta provide that wages and hours agreed upon at a conference of representatives of employers and employees, called by the Minister of Labour or his representative, may be made legally binding by Order in Council on the industry in the area concerned. The Nova Scotia Act applies only to construction work at Halifax, Dartmouth and Sydney.

In *Nova Scotia*, 13 schedules of hours and wages for individual building trades were in force during the year ended Mar. 31, 1957.

In *New Brunswick*, four schedules for individual building trades were in force during the year ended Mar. 31, 1957.

In *Quebec*, under the Collective Agreement Act, hours and wages and also apprenticeship, vacations with pay and family allowances provisions, established by a collective agreement voluntarily entered into by employers and unions or groups of employees, may be made legally binding by Order in Council on all employers and employees in the industry in the district covered by the agreement, if the parties are sufficiently representative of the industry. At Mar. 31, 1957, 102 agreements covering 262,177 workers and 27,745 employers had been generalized to apply either throughout the province or to a certain district. The agreements in force throughout the province apply to the following industries: building materials, the manufacture of women's cloaks and suits, dresses, millinery, ladies handbags, men's and boys' clothing, men's and boys' hats and caps, men's and boys' shirts, fine gloves and work gloves, shoes, furniture, paint, corrugated and uncorrugated paper boxes, the tanning industry, the elevator construction industry, and the casket manufacturing industry. Other agreements concern industries in particular cities or parts of the province including all building trades and printing trades in large urban centres and many rural districts.

In *Ontario*, there were 126 wages and hours schedules in force at Mar. 31, 1957. Throughout the province schedules were in effect for cloakmakers, the men's and boys' clothing industry, men's and boys' hats and caps, the millinery industry and the hard furniture industry. In the construction industry 53 schedules, each for a single trade in a single locality, covered one or more trades in 26 zones. Four schedules were in effect for certain zones in the retail gasoline service industry, and barbers had schedules in 64 zones.

In *Manitoba*, Part II of the Fair Wage Act provides similar machinery for fixing wages and hours in any business, trade or undertaking except agriculture. Orders in Council under this legislation have been passed fixing wages and hours in the barbering and hair-dressing trades.

In *Saskatchewan*, 22 schedules were in effect at Mar. 31, 1957. The schedule for barbers covered the whole province; others applied to bakers and bakery salesmen, carpenters, electrical workers, painters, shoe repairers and beauty culture operators in one or more areas.

In *Alberta*, 28 schedules were in effect during 1957. These governed, in one or more areas, bakers and bakery salesmen, certain individual building trades, dairy employees, garage and service-station workers, radio service, laundry and dry-cleaning employees and barbers.

Regulation of Hours and Annual Holidays.—Five provinces—Ontario, Manitoba, Saskatchewan, Alberta and British Columbia—have statutes that either place absolute limits on working hours or require time and one-half the regular rate to be paid if work is continued after specified limits. There is, in addition, an Act of limited application in Quebec. In the provinces that have no special hours-of-work legislation, the only statutory regulation of hours, apart from that described on p. 720 under the Industrial Standards Acts and the Quebec Collective Agreement Act, is that imposed by factories Acts, mines Acts and, in Newfoundland, an Act governing shops. In New Brunswick and Quebec the limits imposed by the factories Acts apply only to women and boys under 18 years of age. Several minimum wage Acts give authority for the regulation of hours as well as of wages.

In Ontario there is a maximum eight-hour day and 48-hour week with certain exceptions. In Alberta the maximum daily and weekly hours in the cities of Calgary, Edmonton, Lethbridge and Medicine Hat are eight and 44; in the remainder of the province they are eight and 48. In British Columbia hours are limited to eight in a day and 44 in a week. In these three provinces the Acts apply to most workers except farm labourers and domestic servants. In Saskatchewan the Act requires time and one-half to be paid for work after eight hours daily and 44 hours weekly and applies to workers in all industries except agriculture and domestic service. A Manitoba Act covering most industrial workers in the province requires time and one-half to be paid for work done after eight hours in a day and after 48 hours in a week for men and 44 hours for women. In all provinces that have Acts regulating hours, longer hours may be worked in an emergency or by permission of the administrative authority.

Seven provinces—Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia—have legislation in effect providing for annual holidays with pay for workers in most industries, and New Brunswick has legislation requiring annual holidays in the mining and construction industries and for fish, fruit and vegetable packers. In all these provinces except British Columbia and Saskatchewan, workers are entitled to a one-week holiday with pay after a year of employment. A two-week holiday is given in British Columbia and Saskatchewan after a year of employment, in Alberta after two years and in Manitoba after three. A three-week holiday is required in Saskatchewan after five years of service with the same employer. A worker employed for less than a year is entitled, in Quebec, to a half-day for each month of employment and, in Saskatchewan, to one day for each month. Coal miners in Alberta are entitled to a one-day holiday with pay for every 20 days worked in a month but not more than two weeks in a year.

Farm workers are excluded from the holiday provisions in all provinces, and domestic servants in all but Manitoba and Saskatchewan. In addition, Quebec exempts forest operations workers, public corporation employees, salesmen, janitors and watchmen, and certain part-time workers. Ontario exempts professional workers, salesmen, and funeral directors and embalmers. Manitoba and Saskatchewan exempt ranch and market garden employees, and British Columbia exempts professional workers and horticultural workers.

Minimum Wage Regulations.—In Nova Scotia the minimum wage law applies only to women. In Ontario, though the Act applies to both sexes, Orders apply only to women. In Newfoundland, New Brunswick, Manitoba, Alberta and British Columbia there are separate Orders for men and women but in British Columbia most Orders cover both sexes. In Quebec and Saskatchewan all Orders apply to both sexes.

Table 1 shows the minimum rates in effect in December 1958 for several classes of establishment in the principal cities. In Newfoundland, New Brunswick, British Columbia and, with respect to men in Manitoba, the rates set are for the entire province. Elsewhere rates vary according to zone.

¹ Rates apply to 48 or 54 hours in factories; 48 hours in offices; 54 hours in laundries, shops, beauty parlours and theatres; 60 hours in hotels. ² Applies only to canning or processing of fish, vegetables or fruit. ³ Chauffeurs, watchmen, stationary enginemen and firemen 60 cents; bell boys 35 cents. ⁴ Dollars per week.

Section 2.—The Labour Force

The current pace of economic activity in Canada necessitates constant planning and study. To the labour leader, the business man, the social administrator and the legislator, this pace requires a continuous process of plan-revision. To provide up-to-date and reliable information concerning the Canadian labour force, a current and periodic analysis of the state of employment in Canada was organized. A labour force survey, on a sample basis, was conducted in the autumn of 1945 and quarterly surveys were carried on until November 1952, when the survey was placed on a monthly basis. A multi-stage area sample was used involving the selection of progressively smaller sample areas and ultimately of households. Random methods of choice were used at every stage of selection so that all members of the population had an equal chance of inclusion. The present sample covers over 35,000 households in more than 130 different areas of Canada; these include 34 cities having a population of 30,000 or over in 1951 as well as some smaller urban centres and various rural areas. The estimates of the labour force are restricted to the civilian labour force; net strength of the Armed Forces is obtainable directly from official sources. Inmates of institutions and Indians living on reserves are excluded.

The labour force surveys provide a classification of persons 14 years of age or over on the basis of their activity during the week that precedes the beginning of the survey, and who had jobs or were seeking work during the survey week. These divisions of the labour force are defined as follows:—

- (1) **Persons with Jobs.**—This category comprises: (a) *persons at work*—those who did any work for pay or profit or who did unpaid work which contributed to the running of a farm or business operated by a relative; and (b) *persons with jobs but not at work*—those who had jobs but did not work because of illness, bad weather, vacation, industrial dispute or temporary layoff with definite instructions to return to work within 30 days of the time of being laid off. Persons who worked part of the survey week and also looked for work are classed as "persons with jobs".

- (2) **Persons without Jobs and Seeking Work.**—This classification includes those persons who were looking for work during the survey week and did not work. Persons who were temporarily away from their jobs during the whole of the survey week seeking other work were considered as without jobs and were included in this category. In addition to those who were actively looking for work, this classification includes persons who would have looked for work, except that they were temporarily ill, were on indefinite or prolonged layoff, or believed that no work was available.

Information relating to the population 14 years of age or over not in the labour force is also collected. Persons not in the labour force include such groups as those going to school or keeping house in their own homes, persons who are permanently unable to work because of old age or other reason, and persons who are retired or voluntarily idle. Persons such as housewives, students and others who worked part time are classed as "persons with jobs" or, if looking for work, they are classed as "persons without jobs and seeking work".

The estimates derived from the labour force surveys are subject to sampling error. In general the percentage of error tends to decrease as the size of the estimate increases. The chances are about 19 out of 20 that the difference between the estimate and the figure which would have been obtained from a complete count is less than that shown below.

Size of Estimate	Sampling Variability
50,000.....	8,000
100,000.....	11,000
500,000.....	24,000
1,000,000.....	33,000
5,000,000.....	58,000

Data in Table 2 for June 1, 1946 to 1958, are compiled from labour force surveys conducted in late May or early June of those years. The information for years before 1946 is taken from estimates based upon 1931 and 1941 Census material rearranged according to the definitional system used in the labour force surveys, the revised census data being linked with the June 1946 survey on the basis of monthly and annual employment and unemployment figures.

2.—Estimates of the Civilian Labour Force and its Main Components, June 1, 1939-58

NOTE.—Figures do not include persons in institutions and Indians on reserves. Figures for 1951-58 inclusive have been revised since the publication of the 1957-58 Year Book.

Year	Civilian Popu- lation (14 years of age or over)	Civilian Labour Force (14 years of age or over)							Persons not in the Labour Force (14 years of age or over)
		Persons with Jobs					Persons without Jobs and Seeking Work	Total Labour Force	
		Non-agriculture			Agriculture	Total (with jobs)			
		Paid Workers	Other ¹	Total (non-agri- culture)

¹ Employers, 'own-account' and unpaid family workers.

² Newfoundland included from 1950.

Main Characteristics of the Civilian Labour Force, 1946-58.—At the beginning of June 1958 the civilian non-institutional population 14 years of age or over was 11,333,000, an increase of 29 p.c. over the June 1, 1946, population of 8,768,000. In the same period the civilian labour force increased 26 p.c. from 4,862,000 to 6,120,000. The proportion of the population 14 years of age or over in the labour force at the beginning of June 1958 was 54.0 p.c. as compared with 55.5 p.c. in June 1946. A higher average school-leaving age and an increased proportion of the population in the age group 65 years or over were mainly responsible for this decrease in the rate of labour-force participation. The effect of these factors was modified by the increased proportion of married women having jobs outside the home.

Persons with jobs increased 21 p.c. to 5,750,000 at the beginning of June 1958 from 4,738,000 in 1946. Employment in agriculture declined continuously over the period from 1,271,000 in 1946 to 739,000 in 1958, a decrease of 42 p.c. Non-agricultural employment, on the other hand, increased 45 p.c. from 3,467,000 in 1946 to 5,011,000 in 1958; paid workers employed in non-agricultural industries increased by 50 p.c. from 1946 to 1958. The number of persons without jobs and seeking work fluctuated over the period; the proportion of the labour force in this category at the beginning of June 1958 was 6.0 p.c. as compared with 2.6 p.c. at June 1, 1946.

The number of persons not in the labour force at the beginning of June 1958 was 5,213,000, a figure 33 p.c. higher than on June 1, 1946. The increase in this category was most marked for students.

While the proportion of males 14 years of age or over in the labour force decreased from an average of 85.2 p.c. in 1946 to 81.7 p.c. in 1958, the proportion of females in the labour force showed an increase over the period from 24.7 p.c. to 26.3 p.c. Of the total females with jobs, an average of 27.2 p.c. in 1946 were married women; this proportion rose steadily year by year, reaching 43.5 p.c. in 1958.

The decline in agricultural employment relative to the population was large for both males and females. In 1946, 23.4 p.c. of the male population 14 years of age or over was employed in agriculture; by 1958 the proportion had dropped to 11.6 p.c. The decrease for females was relatively greater. Both males and females showed increases in the percentage of the population in non-agricultural employment even though for males the labour force participation rate decreased and the percentage of persons without jobs and seeking work doubled. The proportion of males not in the labour force increased from 14.8 p.c. in 1946 to 18.3 p.c. in 1958; students advanced from 5.5 p.c. to 6.8 p.c. during the period. For females, the proportion not in the labour force decreased from 75.3 p.c. in 1946 to 73.7 p.c. in 1958. Females keeping house increased from 63.2 p.c. in 1946 to 66.7 p.c. in 1953 and then dropped back to 63.2 p.c. by 1958. Females attending school increased over the period from 5.1 p.c. to 6.1 p.c. while the remainder of the category decreased from 7.0 p.c. to 4.4 p.c.

In 1946, 14.1 p.c. of the males and 14.4 p.c. of the females 14 years of age or over were in the 14-to-19-year age group. These percentages decreased gradually for five years, held steady for some time and in the following two years gave indication of increasing in line with the wartime increase in the birth rate. The proportion of males and females aged 65 years or over increased from under 10 p.c. in 1946 to about 11 p.c. in 1958, but there was little change during the period in the relative size of the 20-to-64-year group.

3.—Percentage Distribution of the Population 14 Years of Age or Over in Labour Force and Non-labour Force Categories, by Sex, 1946-58

NOTE.—Percentages are annual averages; those for 1946-52, inclusive, are based on estimates from quarterly surveys and those for 1953-58 on monthly estimates.

Section 3.—Employment, Earnings and Hours*

Subsection 1.—Historical Commentary

Monthly reports on employment have been furnished for many years to the Dominion Bureau of Statistics by establishments usually employing 15 persons or over in the following major industrial divisions: forestry; mining; manufacturing; construction; transportation, storage and communication; public utility operation; trade; finance, insurance and real estate; and certain branches of the service industry, mainly hotels and restaurants, laundries and dry-cleaning plants, recreational and business services. The surveys relate to all sectors of the eight industrial divisions first named. To supplement the employment record that goes back to 1921, monthly statistics of weekly payroll disbursements have been collected since 1941, permitting calculation of per capita weekly wages and salaries. Subsequently, these series were carried back, on an annual basis only, to 1939. The current survey was further extended in the late months of the War to include information on earnings and hours of wage-earners for whom industrial establishments can furnish statistics of hours actually worked and paid for during periods of absence. Commencing in 1946, monthly figures of employment have been published separately for men and women. Additional and more detailed data on earnings and hours of work of both wage-earners and salaried employees are collected annually from manufacturers for one week in the autumn; this series yields separate figures for men and women in the two categories.

The statistics obtained monthly since 1941 relate to all paid workers on the staffs of respondents and their pay for services rendered or during absence-with-pay in their last pay periods in the month, except that casual employees on strength for less than one day in the pay period are omitted. Statistics for owners are excluded by definition, even though they receive part of the return on their investment in the form of salaries. The earnings include wage and salary payments for straight-time and overtime work, shift differentials, regularly paid production, incentive and cost-of-living bonuses and commissions. Payrolls and hours reported for periods exceeding one week are reduced to weekly equivalents.

Although the surveys are restricted to establishments usually employing 15 persons or more, they include high but variable proportions of all paid workers at work in the covered industries as enumerated in the 1951 Census. The estimates of coverage range from 45 p.c. in the included service groups to 92 p.c. in manufacturing and 96 p.c. in mining, with the industrial composite figure relating to 79 p.c. of the total number in the industries surveyed. It is also estimated that the establishments contributing to the monthly record employed 62 p.c. of the total number of paid workers enumerated in all industries, including those in agriculture, fishing and trapping, education, health, government and other services excluded from the surveys, as well as employees of small establishments in the covered industries for which monthly data cannot be obtained.

Industrial employment, payrolls and per capita earnings generally reached all-time high levels in 1957, although evidences of weakness in some fields as compared with recently preceding years then became apparent, particularly in the latter months. The annual index of employment (1949=100) was 122.9, having risen almost without interruption from 1939 when the figure was 60.1. The increase in payrolls in the same period was even more noteworthy. The 1957 index (also on the 1949 base) was 194.5, greatly exceeding that of 32.9 in 1939. Average weekly wages and salaries mounted from \$23.44 in that year to \$67.70 in 1957, or by almost 289 p.c., while the consumer price index advanced from 63.2 to 121.9 in 1957. Income tax rates also increased substantially. The upward movement in employment and earnings during the 18-year period extended in greater or lesser degree to all industries surveyed and to all areas. The increase in employment in manufacturing was nearly 107 p.c., and that in the durable goods component, 171 p.c. Particularly impressive advances from 1939 took place in public utility operation, construction, services and trade. The gains in the period generally are associated not only with a rising standard of living but also with a growing population.

* Prepared in the Employment Section, Labour Division, Dominion Bureau of Statistics.

Index numbers of industrial employment are available for men and women separately since 1949. The generally upward movement to 1957 extended to both sexes, interrupted only in 1954 when the figure for men fell from 1953 by 4.1 points to 109.8, and for women by 1.7 points to 109.9. During most of the period, the growth of employment for men was relatively larger than for women, but in 1957 the index for the latter averaged 123.6 as against 122.7 for men. Differences in the levels of activity in industries employing larger or smaller proportions of men and women are mainly responsible for the moderate variations shown in the indexes for the two sexes.

A monthly record of average hourly and weekly wages of hourly rated wage-earners has been available since the beginning of 1945. Since then, substantial increases in the averages have taken place in all industries and areas, accompanied by widespread declines in the length of the work week. Particularly marked reductions in hours have taken place in manufacturing, in which overtime was an important factor during the war years. A notable exception to the general lowering in the averages of hours worked as compared with 1945 is the construction industry, which had been adversely affected in the early months of the man-hours and hourly earnings record by shortages of labour and materials.

From 1945 to 1957, average hourly earnings in manufacturing have risen by 131 p.c. to \$1.60. Although the 1957 average in plants producing non-durable manufactured goods was lower at \$1.47 than the figure of \$1.73 in the durable goods group, it may be noted that, since the record was established, the increase in the former amounted to 141 p.c. as compared with 125 p.c. in the latter. This disparity in rate of gain was caused

in part by marked expansion in employment in the interval in the higher-pay components of the light manufacturing industries, such as oil refining, pulp and paper products and printing and publishing.

Subsection 2.—Employment and Weekly Earnings, 1957

The 1957 average index numbers of industrial employment and payrolls were 2.3 p.c. and 7.8 p.c., respectively, above those for 1956, previously the maximum figures. However, the trend in both indexes had turned downward towards the end of the year and employment at Dec. 1 in the establishments surveyed was 2.5 p.c. below the level of 12 months earlier, although it was higher than in the same period in 1955 and earlier years. With the weakening of employment, the underlying movement of the general payroll figure was downward in the latter part of 1957; the Dec. 1 index exceeded that for 1956 by only 2 p.c. while at the beginning of the year it had been more than 11 p.c. higher.

Average weekly wages and salaries rose by 5.5 p.c. in 1957 over 1956, reaching an all-time high of \$67.70. The increase was about average for the postwar years and equalled that of 1956 over 1955. In terms of purchasing power, however, the rise in weekly earnings in 1957 was little more than half as great as the increase between 1955 and 1956, consumer prices having increased more sharply in the later period.

Employment for women showed a larger percentage increase in 1957 than was reported for men, the general index for the latter rising 1.8 p.c. and for women 3.9 p.c. over 1956. In manufacturing, the gains for workers of the two sexes differed only slightly. On the whole, women made up 22.6 p.c. of the reported staffs in 1957, a fractionally higher proportion than in immediately preceding years.

Employment by Industry.—Employment in most divisions of the goods-producing industries rose slightly in the early months of 1957 but the trend turned downward in all divisions except mining before the end of the year. On the other hand, the general movement in the service-producing category continued upward throughout 1957.

The timing of the cyclical downturns in activity in the goods-producing divisions differed from industry to industry. The durable goods sector of manufacturing was the first to show declines. The peak in the seasonally adjusted employment index was reached towards the end of 1956, followed by declines throughout 1957. By Dec. 1, employment in durables was 6 p.c. below the level of a year earlier. Staffs declined throughout 1957 in the electrical apparatus, wood, and iron and steel groups but the trend in transportation equipment did not move definitely downward until the autumn. The Dec. 1 figure was 5 p.c. lower than at the same date of 1956. Non-ferrous metal and non-metallic mineral products also showed small year-to-year reductions in employment at the end of 1957.

The curtailment in plants producing non-durable manufactured goods came later than the recession in the durable goods sector. Employment in the group as a whole in the first seven months of 1957 rose slightly from the levels reached in the latter part of 1956, the downturn occurring late in the summer. The declines in three component groups of the non-durable division (rubber, textile and paper products) began earlier, however, and employment in these industries was 7 p.c. or 8 p.c. lower at Dec. 1, 1957, than at the same date of 1956. Late in the year, a larger-than-seasonal decline was reported in clothing. The trend of employment in chemical and petroleum and coal products also turned downward late in 1957 but the Dec. 1 indexes for these industries were higher than a year earlier. Little change was recorded in the 1957 basic situation in foods and beverages, leather goods, printing and publishing and miscellaneous manufacturing groups, with most variations of consequence explicable in terms of seasonal factors.

Mining was the only industry division in the goods-producing class in which employment showed no definite downturn during 1957. Employment in the metal mining group tended to rise, mainly because of the doubling of employment in uranium mining during the year. There were substantial declines in the numbers employed in diamond drilling and prospecting in the metals field. In fuels, oil and natural gas, staffs declined less than is usual in the autumn. Employment in coal mining, which has been declining for many

years, tended to drop early in 1957 but was steady except for seasonal variations in the latter part of the year. Employment in non-metal mining turned downwards in the later months of 1957.

In the service-producing industries, moderate increases in employment were recorded for public utilities, trade, services, and finance, insurance and real estate. Employment in transportation, storage and communication continued slightly above 1956 levels for the greater part of 1957 but dropped off towards the end of the year.

Employment of Women.—The percentage of women in the work forces of larger establishments was higher in 1957 than in any year of the previous decade, although it was considerably lower than in some war years. In general, women form a smaller proportion of the work force in goods-producing than in service-producing industries, and the greater strength of the latter contributed to the rise in the percentage of women employees in 1957. Employment among women increased by 1 p.c. from Dec. 1, 1956 to Dec. 1, 1957, as compared with a decrease of 4 p.c. in the employment of men during the same period.

6.—Annual Average Index Numbers of Employment by Industrial Group 1948-57, and Monthly Indexes 1956 and 1957

NOTE.—These indexes are calculated as at the first day of each month, on the base 1949=100.

Percentage distribution in 1957 ³	2.6	4.1	43.6	9.9	13.4	2.0	15.1	4.9	4.4	100.0

¹ Consists mainly of hotels, restaurants, laundries, dry-cleaning establishments and business and recreational services.

² Newfoundland included from 1949.

³ The proportion of employees reported in the industries, to the total reported by all employers making returns in Canada (12-month average).

7.—Annual Average Index Numbers of Employment, by Industrial Division and Group, 1939 and 1953-57

NOTE.—These indexes are calculated as at the first day of each month, on the base 1949=100.

Industry	1939	1953	1954	1955	1956	1957
Forestry (chiefly logging).....	59.3	100.0	95.1	101.8	113.3	103.2

¹ Proportion of employees reported in metropolitan areas to the total reported by all employers making returns in Canada (12-month average).

Employment, Payrolls and Salaries and Wages.—In the Atlantic Provinces, industrial employment was lower in 1957 than in 1956 but increases were recorded in all other provinces. Average weekly wages and salaries rose in every province. The decline in employment in New Brunswick outweighed the increase in average earnings, and the 1957 payrolls index for that province was lower than the index for 1956; in all other provinces aggregate industrial payrolls were higher.

The only metropolitan areas in which annual averages of employment indexes were lower in 1957 than in 1956 were Saint John, N.B., and Niagara Falls, Brantford and Windsor, Ont. The decline of 7 p.c. in Windsor was the largest recorded and resulted in a drop in payrolls for that city. The decrease in employment in Saint John followed a decline from 1955 to 1956, when employment in all other metropolitan areas increased. Increases in average weekly wages and salaries were general and, with the exception of Windsor, payrolls were up in all cities for which data are published.

Average weekly wages and salaries rose by 5.5 p.c. from 1956 to 1957, matching the advance between 1955 and 1956. The percentage increase was larger than those occurring from year to year between 1953 and 1955 but smaller than those recorded for the earlier part of the postwar period. As shown in Table 10, there was little variation from industry division to industry division in the extent of average earnings increases occurring from 1956 to 1957. The increases of 7.6 p.c. for mining and construction were the largest recorded and that of 4.8 p.c. for manufacturing was the smallest. Increases in wage rates were partly responsible for the rise in average weekly earnings but there were also other factors at work. In some industries in which employment declined, average earnings rose because many of the workers laid off were in the lower-paid categories.

Provincially, the percentage increases in the provinces with the largest work forces—Quebec, Ontario and British Columbia—approximated the national increase of 5.5 p.c. The increases for Newfoundland, Prince Edward Island, Nova Scotia and Saskatchewan were significantly larger than the national average and those for New Brunswick, Manitoba and Alberta were smaller.

10.—Annual Index Numbers of Employment, Payrolls and Earnings together with Average Weekly Wages and Salaries, by Industry, Province and Metropolitan Area, 1956 and 1957

Subsection 3.—Hours and Hourly Earnings, 1957

The questionnaire used in the monthly survey of employment and payrolls since the end of 1944 has also obtained statistics of hours worked and paid for during periods of absence, with corresponding totals of wages paid to the wage-earners for whom records of hours are maintained. These are mainly hourly rated or production workers, since employers frequently do not keep the necessary information for ancillary workers. In a number of industries, no records of hours worked are available. The wages reported include premium overtime, shift differentials, production, incentive and cost-of-living bonuses where paid, as well as straight-time wages including those paid to wage-earners employed for only part of the pay periods covered by the surveys.

The trend of average hourly earnings and weekly wages has been upward throughout the postwar years, during which period the work week has been shortened in most industries. In construction, however, hours have risen since 1944 when labour and materials were in short supply. The changes from 1945 to 1957 are summarized in Table 12.

12.—Changes in Average Hours and Earnings in Specified Industries, 1945 to 1957

Industry	Average Hours Worked			Average Hourly Earnings			Average Weekly Wages		
	1945	1957	Change	1945	1957	Change	1945	1957	Change

Highways, bridges and streets..	36.7	40.9	+ 11.4	63.2	143.8	+127.5	23.19	58.81	+153.6
Service.....	43.8	39.8	— 9.1	43.0	93.5	+117.4	18.83	37.21	+ 97.6

The percentage increases in manufacturing in the period have been notable, particularly in the non-durable goods component. Above-average expansion in recent years in employment in the relatively high-pay groups of the latter division, such as oil refining, pulp and paper, and printing and publishing, with a levelling in several of the relatively low-pay industries, was an important factor in narrowing the percentage difference between earnings in plants producing durable and non-durable manufactured goods. Substantial advances in employment in the 13 years were also reported by several of the heavy industries, notably non-ferrous metal products and electrical apparatus and supplies, but the levels in these classes were closer to the divisional average so that the rise in their working forces had less effect on the gain in the non-durable group as a whole.

In 1957 as compared with 1956, manufacturing showed increases of 5.6 p.c. and 3.8 p.c. in average hourly earnings and weekly wages, respectively, resulting largely from upward adjustments in wage rates. The release of lower-paid wage-earners in the later months of 1957 also contributed. The gains in the heavy and the light manufacturing classes were slightly above those in manufacturing as a whole, caused by a relatively larger decline in the total of hours reported in the more highly paid durable goods component. In that division, the total hours reported fell by over 3 p.c. in 1957 from a year earlier, as compared with a loss of under 2 p.c. in non-durables as a group. The general decline in manufacturing was 2.3 p.c. Most industries in the division shared in the upward movement of average earnings and there were also widespread though generally moderate reductions in average hours as compared with 1956, caused in part by less overtime work and in part by changes in the standard work week in some industries.

Earnings per hour in mining rose by 8.8 p.c. to a new maximum of 186.5 cents in 1957. There were increases over 1956 in all main branches of the industry but advances were most pronounced in base metal and oil and natural gas extraction. Expanded operations in uranium mines, in which average hours and hourly earnings were relatively high, contributed materially to the generally higher average; another factor of importance in the mining industry was the reduced employment in coal and non-metallic mineral mines, where average earnings were below the Canada level in mining. The average work week in mining was half an hour shorter in 1957, while average weekly wages rose by 7.5 p.c.

In construction, earnings and hours of work were higher in 1957 than in 1956; there was a gain of 7.1 p.c. in the hourly average, of 7.7 p.c. in the weekly wage and of 0.2 hours in the average work week. Moderate revisions in wage rates raised the averages of earnings in electric and motor transportation, and also in hotels and restaurants, and laundries and dry-cleaning plants, the only service industries for which man-hours and hourly earnings data are published.

¹ The durable goods group includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, and non-metallic mineral products; the non-durable goods group includes all other manufacturing industries.

² Includes New Westminster.

Subsection 4.—Hours and Earnings in Manufacturing Industries*

An annual survey of hours and earnings in manufacturing relating to the last week of October supplements the monthly data included in the preceding Subsections. Separate figures of hours and earnings of men and women wage-earners and salaried employees

* More detailed information is given in DBS annual reports *Earnings and Hours in Manufacturing*.

are obtained each year. In addition, percentage distribution of wage-earners in a given range of hours were obtained annually for the years 1946 to 1949 and every third year thereafter (1955 data given in Table 19); in 1950, 1953 and 1956, percentage distributions of wage-earners and salaried employees by amounts earned in the survey week were obtained (1956 data given in Table 18); and in 1951, 1954 and 1957, hours and earnings of office workers were segregated from those for managerial, supervisory, professional and other senior salaried employees (1957 data given in Table 16).

The annual survey is limited to establishments usually employing 15 or more persons and covers approximately 90 p.c. of all employees reported to the Annual Census of Manufactures. Establishments are asked to report for all casual, part-time and full-time employees on staff in the survey week, excluding proprietors, firm members, pensioners, homeworkers, employees absent without pay throughout the week and staffs in manufacturers' separately organized sales offices. Gross earnings, including regularly paid bonuses, overtime pay and amounts paid for absences, are reported for the week. The reported hours comprise part-time, full-time and overtime hours worked and hours of paid absence in the survey week. The general averages are usually very similar to those derived from the corresponding monthly survey.

The annual survey reflects a continued upward movement in wages and salaries throughout the postwar period. Table 14 provides year-to-year comparisons of average earnings from 1949. In the eight years, men's weekly wages rose by 52.6 p.c. and their salaries by 60.0 p.c. In the same period, women's weekly wages advanced by 45.3 p.c. and their salaries by 58.9 p.c. Since the general trend in hours worked has been downward because of reductions in the standard work week and other factors, the increases in the average hourly earnings of wage-earners have been proportionately greater than in their weekly wages, the eight-year advances amounting to 63.6 p.c. for men and 54.4 p.c. for women.

Variations in the general and group averages and the year-to-year comparisons are, of course, related to varying economic and other conditions affecting the component industries in the survey periods and to the industrial and, in some cases, area distributions of the reported employees. Tables 15 and 16 show the 1957 averages of hours and earnings for wage-earners and salaried employees, respectively, for the provinces, the six largest metropolitan areas, the major industry groups and several important industries. It will be noted that women average consistently lower earnings than men in the same area or industry unit. This is a result not only of pay differentials and occupational differences, but also of such factors as a frequently shorter work week for women, a greater incidence of part-time work and absenteeism among them, their higher proportions of younger and less experienced workers, and their industrial distributions.

Salaried employees comprise increasing proportions of manufacturing staffs as a whole. Table 17 shows that the proportion of salaried employees has risen from 16.3 p.c. in 1946 to 23.8 p.c. in 1957. This trend is associated with developments in planning, administration and record-keeping which have increased requirements for professional and clerical personnel, and with changes in manufacturing processes which have frequently reduced manpower requirements per unit produced. Changes in industrial distributions of employment also contribute to variations in the ratio of salaried personnel to wage-earners, which in any one period is further influenced by seasonal, market and other conditions affecting levels of production. These usually cause sharper fluctuations in numbers of wage-earners than of salaried employees.

In 1957, the general office and clerical personnel made up 61.2 p.c. of all salaried employees, 48.1 p.c. of the men and 94.9 p.c. of the women. The office workers averaged \$67.98 for both sexes, \$81.08 for men and \$50.80 for women in the 1957 survey week, as compared with salaried employees' general averages of \$89.92 for both sexes, \$104.63 for men, and \$51.84 for women. The wide differential between earnings of salaried men as a whole and of male office workers is a result of the exclusion from the latter category of managerial, supervisory, professional and other senior personnel who are usually paid well above the average.

14.—Average Earnings of Male and Female Workers and Increases over the Preceding Year, Weeks Ended Oct. 31, 1949-57

Section 4.—Wage Rates, Hours of Labour and Other Working Conditions

Statistics on occupational wage rates by industry and region or city, and standard weekly hours of labour are compiled by the federal Department of Labour and published in the annual report *Wage Rates and Hours of Labour*. The statistics published are based on an annual survey covering some 13,500 establishments in most industries and apply to the last normal pay period preceeding Oct. 1.

Average wage rates of time workers and average straight-time earnings of piece workers and other incentive workers in a given occupation are shown separately but are combined in the calculation of index numbers. Predominant ranges of rates for each occupation used are also given. Overtime pay is excluded.

The industry index numbers measure changes in wage rates for non-office employees below the rank of foreman. They do not, however, provide a basis for comparing the level of wages in one industry with that in another. More detailed information on concepts and methods of developing these statistics is given in the annual report.

20.—Index Numbers of Average Wage Rates for Certain Main Industrial Groups, 1948-57

(1949=100)

NOTE.—Indexes for the years prior to 1949 are conversions of the previous series on the 1939 base. Indexes back to 1901 may be obtained from the Department of Labour publication *Wage Rates and Hours of Labour 1957*.

¹ Includes a small number of employees in establishments reporting alternate weeks of 5 and 5½ days. ² Meal allowances are sometimes reported as given in addition to other types of overtime compensation, or as the sole type of overtime compensation.

Wages of Farm Labour.—Wage rates for farm help have been increasing slightly over the past few years. Moderate gains were recorded in 1952 and 1953 and after levelling off in 1954 and 1955 the upward trend was resumed in 1956. The information on farm wages is provided by volunteer farm correspondents located in all provinces except Newfoundland.

27.—Average Daily and Monthly Wages of Male Farm Help as at Jan. 15, May 15 and Aug. 15, 1954-58

NOTE.—Figures from 1940 are given in the corresponding table of previous Year Books beginning with the 1943-44 edition.

Section 5.—Unemployment Insurance

During the depression of the 1930's the necessity arose for some form of systematic unemployment assistance, for legislation that would provide for federal control and administration of such assistance and for an employment service that would be closely related to it. Thus in 1935 the Employment and Social Insurance Act was passed by the Federal Parliament but was subsequently declared invalid by the Privy Council. Later, consent of the provinces was sought to an amendment to the British North America Act to empower the Federal Parliament to legislate on unemployment insurance and in 1940 the Unemployment Insurance Act was passed, making provision for a compulsory contributory unemployment insurance scheme and also for the establishment of a national employment service to operate in conjunction with and ancillary to the unemployment insurance operations carried on under the Act. The Act, which came into effect on July 1, 1941, was later amended on several occasions and was replaced by a new Unemployment Insurance Act passed on July 1, 1955, and effective Oct. 2, 1955.

Legislation provides for compulsory coverage of four-fifths of non-agricultural employees under an insurance program administered by the Federal Government and requires employers to join with their insurable employees and the Government in building up a fund. This fund is held in trust by the Unemployment Insurance Commission for the payment of benefits to unemployed insured persons. The Act is administered by a Commission of three persons appointed by the Governor in Council of whom one is the Chief Commissioner. One Commissioner, other than the Chief Commissioner, is appointed after consultation with employer organizations, and the other after consultation with employee organizations.

The Unemployment Insurance Act applies to all persons employed under a contract of service, except the following: employment in specified industries or occupations such as agriculture, horticulture, forestry (effective Jan. 1, 1956, coverage was also extended to certain employments in these three industries); the Canadian Armed Forces; the permanent public service of the Federal Government; provincial government employees except where insured with the concurrence of the government of the province; certified permanent employees of municipal or public authorities; private domestic service; private duty nursing; teaching; certain director-officers of corporations; workers on other than an hourly, daily or piece-rate, earning more than \$4,800 a year unless they elect to continue as insured persons; employees in a charitable institution or in a hospital not carried on for purpose of gain except where the institution or hospital consents to insure certain groups or classes of persons with the concurrence of the Commission. All persons paid by the hour, day, or at a piece-rate (including a mileage rate) are insured regardless of amount of earnings, together with all employees who receive \$4,800 or less at weekly, monthly, yearly or commission rates.

Unemployment Insurance Fund.—Employers and employees contribute to the Unemployment Insurance Fund, the total paid by each group being equal. The Federal Government contributes an amount equal to one-fifth of the combined employer-employee contributions and assumes the cost of administration. From July 1, 1941 to Mar. 31, 1957, employers and employees contributed \$1,757,865,079 to the Fund and the Federal Government added \$351,569,530. Interest and profit on the sale of securities amounting to \$223,134,877 and fines of \$294,145 made a total revenue of \$2,332,863,631.

Benefits first became payable on Jan. 27, 1942, and from that date to Mar. 31, 1957, total benefit payments amounted to \$1,458,288,979, leaving a balance of \$874,574,652 in the Fund. Revenues of the Fund are invested in Government of Canada bonds the par value of which amounted to \$878,402,500 as at Mar. 31, 1957.

\$57.00 or over.....	60	60	1.20			

¹ The weekly contribution is based on actual earnings in the week irrespective of the number of days in which the earnings are obtained.

² Unemployment insurance stamps combine both employer and employee contributions.

³ Rates calculated on the average weekly contributions for the last 30 weeks in the 104 weeks preceding claim. Since Oct. 2, 1955, a claimant to qualify for benefit must have at least 30 weekly contributions in the last 104 weeks prior to claim; 8 weeks must be in the last 52 weeks. (These periods of 104 weeks and 52 weeks may be extended under certain circumstances.)

⁴ Employees earning less than \$9 in a week receive one-half of a 32-cent stamp (8 cents from the employer and 8 cents from the employee).

The duration of benefit is related to the contribution history—one week's benefit for every two weeks' contributions in the past 104 weeks with a maximum of 36 weeks. The rate of benefit is determined by the average of the contributions in the past 30 weeks. No benefit is payable in a benefit period until a claimant has served a waiting period equivalent to one full week's benefit.

Disqualifications for benefit include: loss of work owing to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or any institution supported out of public funds; refusal to attend a course of instruction or training if directed to do so; residence outside Canada unless otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks may be imposed if an employee is discharged by reason of his own misconduct or leaves the employment voluntarily without just cause or refuses suitable employment.

Seasonal benefit is payable in the period Dec. 1 to mid-May to certain claimants whose benefits have been exhausted or who have insufficient contributions to qualify for regular benefit. Prior to 1957 the period was Jan. 1 to mid-April.

Statistics of Unemployment Insurance.*—Detailed statistics on unemployment insurance, collected for administration purposes, also provide information of general interest on employment and unemployment and on financial aspects of the scheme. Table 28 shows, for 1956 and 1957, the number of claims received each month in local offices of the Unemployment Insurance Commission, the number of active claimants at each month-end, the average weekly number of beneficiaries each month and total benefits paid. The number of claims received shows the volume of new cases of recorded unemployment among insured persons, while the number of active claimants at month-end indicates recorded unemployment at a given time. Initial and renewal claims filed in 1957 increased by 747,851 from the previous year to a total of 2,373,235. The month-end count of active claimants, who were either applying for or receiving benefit, averaged 272,349 in 1956 and 380,178 in 1957. The average weekly number of beneficiaries in the peak month of March was 451,500 in 1956 and 498,300 in 1957. By December of that year the figure was up from the previous year's average by some 214,000. Benefits paid rose from \$210,000,000 in 1956 to \$305,000,000 in 1957.

* Statistics of unemployment insurance are compiled and published by the Unemployment Insurance Section, Labour Division, Dominion Bureau of Statistics, from material supplied by the Unemployment Insurance Commission. More detailed analysis of these data is available in DBS publication *Annual Report on Benefit Periods Established and Terminated under the Unemployment Insurance Act* and monthly *Statistical Report on Operations of the Unemployment Insurance Act*.

In addition to the monthly data published on the operation of the Unemployment Insurance Act, annual tabulations are published of the persons employed in insurable employment and of benefit periods established and terminated. The data on the insured population in Table 29 were obtained from returns from the renewal of insurance books and contribution cards at June 1, 1956 and May 1, 1957. Included are persons contributing in insurable employment on those dates and persons on claim. The number insured at May 1, 1957, increased by 2.2 p.c. from the previous book renewal to 3,807,320. Unemployment insurance was extended to fishermen on Apr. 1, 1957. This coverage change is interesting since the majority of commercial fishermen in Canada are not wage-earners but sharesmen or lone workers. It was decided to treat as the 'employer' the person who first acquires the catch from the person who does the actual fishing. In some instances this is his actual employer, in others it is the buyer of the catch, and in still others it is the person or organization that markets the catch for the fisherman or makes contributions to the Fund. Fishermen were not considered for benefit until the 1957-58 seasonal benefit period.

Table 30 distributes by province persons establishing regular benefit periods, regular benefit periods terminated, average weeks paid and average dollar benefit paid on these terminations. A claimant establishes a *regular benefit period* when he submits his claim in the prescribed manner and proves he has fulfilled the minimum contribution requirements. The duration of benefit authorized, the weekly rate authorized and his total entitlement is then calculated and his benefit may be drawn upon during successive intervals of unemployment. His benefit period terminates when either he has exhausted the amount authorized or 12 months have elapsed since he established, whichever comes first. The number establishing ordinary benefit periods in 1957 increased by 30.2 p.c. from 834,424 to 1,086,172. The duration of paid benefit in 1957 was 12 weeks on the average compared with 11 weeks in 1956. Ordinary benefits paid averaged \$256.26 on terminations in 1957, up from \$213.61 on terminations in 1956.

30.—Persons Establishing Regular Benefit Periods, Benefit Periods Terminated, and Duration and Amount of Benefit Paid, by Province, 1956 and 1957

NOTE.—Based on a 25-p.c. sample.

Table 32 gives the provincial distribution of persons establishing seasonal benefit periods in 1956 and 1957, average weeks paid and average benefits paid. Prince Edward Island claimants averaged the longest duration of paid seasonal benefit in both years, while Newfoundland claimants averaged the highest paid benefit. The average duration of paid seasonal benefit in 1956 was 7.95 weeks and in 1957, 7.08 weeks; the average benefit in 1956 amounted to \$148.93 and in 1957 to \$141.86.

Employment Service.—The Unemployment Insurance Commission operates a free employment service under authority of the Unemployment Insurance Act, 1940. The public employment offices, which had functioned under a joint federal-provincial arrangement for more than two decades, were taken over by the Commission on Aug. 1, 1941, and additional offices were established in all provinces except Quebec. The Commission established its own offices in Quebec and the Provincial Government thereupon reduced the number of its offices.

Section 6.—Vocational Training*

The federal Department of Labour, under the authorization of the Vocational Training Co-ordination Act 1942, co-operates with the provinces in promoting and developing vocational training in Canada by sharing with the provincial governments the costs of establishing and operating various types of schools and training programs designed to fit trainees for employment.

The federal-provincial program under which all classes and training projects are operated is known as 'Canadian Vocational Training'. In conducting this program, the Minister of Labour receives advice and co-operation from the Vocational Training Advisory Council which consists of representatives of provincial governments, employers, organized labour and other bodies concerned with vocational training in Canada. Problems regarding apprenticeship, including federal participation therein, are referred to the Apprenticeship Training Advisory Committee which reports to the Minister through the Council.

The established procedure is to have all training programs operated by or under the supervision of the appropriate provincial authority and to reimburse the provinces for provincial government expenditures in connection with such projects. Where classes or training programs are operated for federal government departments, the Armed Forces, or other federal agencies, the provinces are reimbursed for the full costs; otherwise they are reimbursed for one-half of such expenditures subject to the limitation of funds voted for such purpose by Parliament.

There are four federal-provincial agreements governing the nature and extent of the sharable expenditures for different types of training: the Vocational and Technical Training Agreement No. 2, the Apprenticeship Training Agreement, the Vocational Training Agreement, and the Vocational Correspondence Courses Agreement.

* More detailed information is given in the annual report, *Canadian Vocational Training Branch*, published as a supplement to the annual report of the Department of Labour.

Apprenticeship Training.—Apprenticeship agreements covering a ten-year period commencing Apr. 1, 1944, were signed by all provinces except Quebec and Prince Edward Island. Newfoundland signed an agreement in 1950 for the remainder of the 1944-54 period. These agreements have been renewed for a further ten-year period expiring on Mar. 31, 1964. They provide for sharing, on a 50-50 basis, in provincial government expenditures on the training of indentured apprentices who are registered with the provincial Departments of Labour under the provisions of the apprenticeship Act of each province. Training is provided on the job and in specially organized classes which may be conducted on a full-time basis during the day or as part-time day or evening classes. As of Mar. 31, 1958, a total of 17,534 apprentices was registered. Federal Government expenditures for this purpose for the year ended Mar. 31, 1958, were as follows:—

<i>Province</i>	<i>Payment</i>	<i>Province</i>	<i>Payment</i>
	\$		\$
Newfoundland.....	45,535	Saskatchewan.....	120,950
Nova Scotia.....	77,897	Alberta.....	355,052
New Brunswick.....	60,838	British Columbia.....	273,834
Ontario.....	306,175	Northwest Territories.....	363
Manitoba.....	91,004		
		TOTAL.....	1,331,748*

* Does not include sales tax amounting to \$2,144.

Special Vocational Training Projects.—Agreements that provide for sharing with the provinces the costs of various types of training projects, other than those regularly conducted in schools assisted under the provisions of the Vocational and Technical Training Agreement No. 2, have been in operation since 1939. These agreements were consolidated in 1948 and expired in 1954; they have been renewed for a further five-year period, except that the provision for sharing the costs of financial assistance to university students and nurses-in-training is subject to renewal on a year-to-year basis. The conditions governing financial assistance to the various types of projects are set forth in schedules attached to and forming part of each agreement. These schedules cover special training classes for members of the Armed Forces, the costs of which are borne entirely by the Federal Government; training programs on an individual or class basis for veterans of the Armed Forces for which the provinces are reimbursed 100 p.c.; and special training programs for employees of Federal Government departments, the full cost of which is also borne by the federal treasury. In addition the costs of the following types of classes are shared equally by the federal and provincial governments: training for unemployed persons who require such training to fit them for available employment; rehabilitation training for disabled persons; short-term classes for young people in rural communities; and training programs for supervisors in industrial establishments. Total expenditure from the federal treasury under these vocational training agreements for the year ended Mar. 31, 1958, was \$1,029,425.

Correspondence Courses.—Under the provisions of the Vocational Correspondence Courses Agreement, the Federal Government shares equally with the provincial governments in the costs of printing and preparing correspondence courses. These courses, of which there are approximately 100, must be approved by a committee consisting of the provincial officials in charge of correspondence instruction. They are made available to students anywhere in Canada on the same terms as for students in the province where the course has been prepared. The sum of \$125,000 was appropriated in 1950 to provide for such expenditures during a five-year period. Payments are made to the provinces only on completion of approved courses, and the term of the agreements has been extended to Mar. 31, 1959, to take care of incompleeted courses and needed revisions.

Section 7.—Industrial Accidents and Workmen's Compensation

Subsection 1.—Fatal Industrial Accidents

Statistics of fatal industrial accidents have been compiled by the federal Department of Labour since 1903. The data are now obtained from provincial Workmen's Compensation Boards, the Board of Transport Commissioners and other government authorities, departmental correspondents and from press reports.

34.—Fatal Industrial Accidents, 1954-57

Totals.....	1,296	1,326	1,462	1,351	100.0	100.0	100.0	100.0

Causes of Industrial Fatalities.—During 1957, of the 1,351 fatal accidents to industrial workers, 381 were the result of the victims being struck by objects; 58 by automobiles or trucks; 51 by falling trees or branches; 43 by objects falling in mines or quarries; 33 by objects falling from stock piles and loads; and 31 by landslides and cave-ins. Collisions, derailments, wrecks, etc., were responsible for 366 industrial fatalities; automobiles and trucks were involved in 163 of these fatalities; tractors and loadmobiles in 69; watercraft in 59; and aircraft in 47. Falls and slips were responsible for 229 industrial deaths, of which 222 were falls to different levels including 75 deaths caused by falls into rivers, lakes, seas or harbours, 35 by falls from buildings, roofs or towers, and 27 by falls from scaffolds and stagings. There were 86 deaths caused by workers being caught in, on, or between parts of machinery or other agencies. Contact with electric current was responsible for 84 industrial fatalities. There were 82 deaths caused by exposure to dust, poisonous gases and poisonous substances. Conflagrations, explosions and exposure to hot substances caused 70 industrial fatalities and 31 were caused by over-exertion, strain, etc.

Subsection 2.—Workmen's Compensation*

In all provinces legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment, or for disablement caused by a specified industrial disease, except where the workman is disabled for fewer than a stated number of days. The Acts of all provinces provide for a compulsory system of collective liability on the part of employers. To ensure payment of compensation each Act provides for an accident fund, administered by the province, to which employers are required to contribute at a rate determined by the Workmen's Compensation Board in accordance with the hazards of the industry. A workman to whom these provisions apply has no right of action against his employer for injury from an accident during employment. In Ontario and Quebec public authorities, railway and shipping companies, and

* More detailed information is given in the Department of Labour publication, *Workmen's Compensation in Canada, A Comparison of Provincial Laws*.

telephone and telegraph companies are individually liable for compensation as determined by the Board and pay a proportion of the expenses of administration. A federal Act provides for compensation for accidents to Federal Government employees according to the conditions laid down by the Act of the province in which the employee is usually employed. Seamen who are not under a provincial Workmen's Compensation Act are entitled to compensation under the Merchant Seamen Compensation Act.

In all provinces, free medical aid is given to workmen during disability. Compensation is payable in all provinces for anthrax and for poisoning from arsenic, lead, mercury and phosphorus and silicosis is compensated under certain conditions. Other diseases compensated vary according to the industries of the provinces.

Scope of the Workmen's Compensation Acts.—The Acts vary in scope but in general they cover construction, mining, manufacturing, lumbering, transportation and communication and the operation of public utilities. Undertakings in which not more than a stated number of workmen are usually employed may be excluded, except in Alberta and British Columbia.

Benefits.—Under each Act, except those of Saskatchewan and Alberta, if a workman is disabled from earning full wages for fewer than a stated number of days, usually called the 'waiting period', he cannot recover compensation for the period of his disability or, in Manitoba and British Columbia, for the first three days of his disability. Where the disability continues beyond the required number of days, compensation is payable from the date of the accident. Medical aid is always paid from the date of the accident. In Saskatchewan and Alberta the waiting period is one day, that is, compensation is not payable when the workman is off work only for the day on which the accident occurs. When he is disabled for a longer time, compensation begins from the day following the accident.

Burial expenses are paid to the amount of \$300 in Ontario, \$250 in Saskatchewan and British Columbia, and of \$200 in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Manitoba and Alberta. In all provinces, except Nova Scotia and Prince Edward Island, an additional sum is allowed for transporting the workman's body.

A widow or invalid widower or a foster mother with children under the age limit, receives a monthly payment of \$75 in Ontario, Saskatchewan and British Columbia; \$35 in Manitoba; \$60 in Alberta and Newfoundland; \$55 in Quebec; and \$50 in Prince Edward Island, Nova Scotia and New Brunswick. In addition, a lump sum of \$300 is paid in Ontario; \$250 in Saskatchewan; \$200 in Quebec and Manitoba; \$150 in Alberta; and \$100 in all other provinces.

For each child in the care of a parent or foster mother receiving compensation, a monthly payment of \$35 is made in Saskatchewan; \$30 in Alberta; \$25 in Ontario, Manitoba and British Columbia; \$20 in Nova Scotia, Quebec, Newfoundland and Prince Edward Island; and \$12 in New Brunswick; with a maximum of \$170 to any one family in Prince Edward Island and \$150 in Nova Scotia.

For each orphan child a monthly payment of \$45 is made in Saskatchewan; \$35 in Manitoba and Ontario; \$30 in Nova Scotia, Quebec, British Columbia, Prince Edward Island, Newfoundland and Alberta (in Alberta a further amount, not exceeding \$10 a month, may be given at the discretion of the Board); and \$25 in New Brunswick; with a maximum of \$120 a month to any one family in Prince Edward Island and of \$150 in Nova Scotia.

Invalids excepted, payments to children are not continued beyond the age of 16 years in seven of the provinces but the Board has discretion to pay compensation to the age of 18 years if it is considered desirable to continue a child's education. In Quebec, the age limit is 18 years and in New Brunswick and British Columbia compensation is paid to the age of 18 years if a child is regularly attending school. In Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan and British Columbia payments to invalid

children are continued until recovery, but the other provinces make payments only for the length of time the Board considers that the workman would have contributed to their support.

Where the only dependants are persons other than consort or children, all the Acts provide that compensation is to be a reasonable sum proportionate to the pecuniary loss but the total monthly amount to be paid to all such dependants is limited to \$100 in Ontario; \$85 in Alberta; \$75 in British Columbia; and \$60 in Prince Edward Island, Nova Scotia and Manitoba. In British Columbia, if a workman leaves dependent parents as well as a widow or orphans, the maximum payable to a parent or parents is \$75 a month. Compensation to dependants, other than consort or children, is continued only for such time as the Board considers that the workman would have contributed to their support.

Except in Alberta and British Columbia, each Act places a maximum on the total amount of benefits payable to dependants if the workman dies. A maximum is placed on the amounts that may be paid to the widow and children in Prince Edward Island and Nova Scotia; in Prince Edward Island the maximum is \$170 to a widow and children and \$120 to orphan children and in Nova Scotia the maximums are both \$150. The maximum to all dependants is 75 p.c. of the workman's earnings in Newfoundland, New Brunswick, Prince Edward Island, Quebec and Manitoba. In Ontario and Saskatchewan the average earnings are the maximum amount payable.

Irrespective of the workman's earnings, however, compensation may not fall below certain minimum monthly amounts. The minimum payable to a consort and one child in Quebec is \$75 a month or \$95 if there is more than one child; in Manitoba the minimum is \$90 if there is a consort and one child and \$115 if there is more than one child; in Saskatchewan the minimum is \$100 a month to a consort and child and \$115 to a consort and two children plus \$10 a month for each additional child. In Newfoundland, a widow must receive at least \$60 a month with a further payment of \$20 for each child under 16 years of age unless the total exceeds \$130. In Ontario, the minimum payable to a widow is \$75 a month with a further payment of \$25 for each child up to but not exceeding \$150 a month.

Compensation for total disablement in Nova Scotia is a periodical payment for the duration of the disability equal to 70 p.c. of average earnings; in the other provinces the rate is 75 p.c. Except in New Brunswick, the Acts fix minimum sums to be paid for a permanent total disability. The minimum is \$15 a week in Prince Edward Island, Quebec and Manitoba, and \$25 in Saskatchewan, Alberta and British Columbia. In Newfoundland the minimum is \$65 a month, and in Nova Scotia and Ontario \$100 a month. If average earnings are less than the minimum amount allowed, the amount of the earnings is paid in all provinces except Nova Scotia and Saskatchewan. For partial disablement, compensation is either a percentage of the difference in earnings before and after the accident, or the amount is determined by the Board according to the diminution of earning capacity, the percentage rate in either case being the same as in total disablement. In all provinces, if the impairment of earning capacity is 10 p.c. or less (5 p.c. or less in Alberta), a lump sum may be given.

The average earnings on which compensation is based are limited to \$5,000 a year in Ontario and Saskatchewan; \$4,000 in New Brunswick, Quebec, Alberta and British Columbia; \$3,500 in Manitoba; \$3,000 in Newfoundland, Nova Scotia and Prince Edward Island. If the workmen's earnings at the time of an accident are not considered a proper basis for compensation, the Board may use as a basis the average earnings of another person in the same grade of work. Compensation paid workmen under 21 years of age may be raised later if it appears that their earning power would have increased had the injury not occurred.

Table 35 gives the number of industrial accidents reported by each of the provinces and the amount of compensation paid by the Workmen's Compensation Boards in the years 1956 and 1957.

35.—Industrial Accidents Reported and Compensation Paid by Workmen's Compensation Boards, 1956 and 1957

¹ Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for compensation; the period varies in the several provinces. ² Includes, except where noted otherwise, payments to compensate for lost earnings, medical aid payments, cost of rehabilitation and hospitalization (not including capital expenditures), pensions paid (not pensions awarded) for temporary and permanent disabilities. ³ Excludes payments by employers who make direct compensation to their employees; such employees come under Schedule II of the Ontario and Quebec Workmen's Compensation Acts. ⁴ Excludes hospital costs.

Section 8.—Organized Labour in Canada*

More than 1,450,000 Canadian workers belong to trade unions. The 167 unions and organizations active in the country have, in membership, workers from all geographic areas and from most sections of industry. Although approximately one-third of the paid workers belong to unions, there is no uniform expansion of organization across the country. The central and industrial provinces of Ontario and Quebec account for 58 p.c. of total union membership; the Montreal and Toronto labour market areas combined represent over one-quarter of the total membership in Canada.

The 1958 labour organization survey carried out by the Canadian Department of Labour (18 months after the establishment of the Canadian Labour Congress) indicates that much has been done to consolidate the larger organization which grew out of the amalgamation of the Trades and Labour Congress of Canada and the Canadian Congress of Labour. All duplication of provincial federations and of local labour councils has been removed and there now exists within the Canadian Labour Congress nine provincial federations and 96 local labour councils. The total membership of the Canadian Labour Congress is in excess of 1,144,000.

The other major labour congress in Canada is the Canadian and Catholic Confederation of Labour which is limited largely to the Province of Quebec. Its membership has increased to slightly over 104,000 and there are 13 federations active within its organization.

* A special article on the History of the Labour Movement in Canada prepared by Dr. Eugene Forsey, Director of Research, Canadian Labour Congress, appears in the 1957-58 Year Book, pp. 795-806.

On a long-term basis, there has been a shift in the percentage of trade union members coming from various industries. Manufacturing and transportation have traditionally been the major contributors to union membership in Canada, accounting for 40 p.c. and 20 p.c., respectively, of the total. However, this percentage has been dropping gradually as union membership has increased in other industries, particularly among the service industries which now account for 11 p.c. of the total. An expansion of unions among municipal and provincial employees has been important in bringing this group into greater prominence.

Labour Union Statistics.—Tables 36, 37 and 38 give historical and current figures on union membership in Canada.

Section 9.—Strikes and Lockouts

Statistical information on strikes and lockouts in Canada is compiled by the Economics and Research Branch of the Department of Labour. Tables 39 and 40 cover strikes and lockouts involving six or more workers and lasting at least one working day; also strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine man-days. The developments leading to work stoppages are often too complex to make it practicable to distinguish statistically between strikes on the one hand and lockouts on the other. However a work stoppage that is clearly a lockout is not often encountered.

The number of workers involved includes all workers reported on strike or locked out, whether or not they belonged to the unions directly involved in the disputes that led to work stoppages. Where the number of workers involved varied in the course of a stoppage, the peak figure is used in tabulating annual totals. Workers who were laid off as a result of a stoppage but were not on strike or locked out are not included in the number of workers involved.

Duration of strikes and lockouts in terms of man-days is calculated by multiplying the number of workers involved in each work stoppage by the number of working days the stoppage was in progress. Where the number of workers involved varied during the period of a stoppage, an appropriate adjustment is made in the calculation as far as this is practicable. The duration in man-days of all work stoppages in a year is also shown as a percentage of estimated working time, based on the annual average of all non-agricultural paid workers in Canada.

The data on duration of work stoppages in man-days are provided to facilitate comparison of work stoppages in terms of a common denominator. They are not intended as a measure of the loss of productive time to the economy.

39.—Summary Statistics of Strikes and Lockouts, 1950-57

Section 10.—Canada and the International Labour Organization

The Department of Labour is the officially designated liaison agency between the Government of Canada and the International Labour Organization. The ILO was established in 1919, in association with the League of Nations under the Treaties of Peace, with the object of improving labour and social conditions throughout the world by international agreement and legislative action. Under an agreement approved by the General Conference of the International Labour Organization by the United Nations General Assembly in 1946, the Organization became a specialized agency of the United Nations although retaining its autonomy.

The ILO is an association of 79 Member States, financed by their governments, and democratically controlled by representatives of those governments and of their organized employers and workers. It is comprised of three main organs: (1) the International Labour Conference; (2) the International Labour Office, and (3) the Governing Body. Since World War II the ILO has extended its field of activities by the establishment of ten tripartite industrial committees to deal with problems of important world industries, by the holding of regional and special technical conferences, and by the expanded program of technical assistance to aid the development of backward countries in such fields as co-operatives, vocational training, productivity techniques and employment service organization.

The *International Labour Conference* is a world assembly for the consideration of labour and social problems. It meets annually and is attended by four delegates from each Member State (two representing the Government, one representing the employers and one representing the workers) accompanied by technical advisers. The Conference formulates international standards concerning working and living conditions in the form

of Conventions and Recommendations. A Convention, after adoption, must be considered by the competent authorities in each Member State with a view to possible ratification; however each Member State decides whether or not to ratify any Convention, and only by ratification does it assume the obligation to bring its legislation in that field up to the standard set by the Convention. A Recommendation is less formal: it contains general principles for the guidance of governments in drafting legislation or in issuing administrative orders and is not subject to ratification by the Member States.

The *International Labour Office* acts as the permanent secretariat of the ILO and as a world research and information centre and publishing house on all subjects concerned with working and living conditions. In the operational field it assists Member States by furnishing experts on manpower training and technical and other types of assistance. The ILO maintains branch offices in all parts of the world; the Canada Branch is located at 202 Queen Street, Ottawa.

The *Governing Body* of the ILO consists of 40 members—20 government representatives, 10 employers' representatives and 10 workers' representatives. Of the government seats, each of the 10 Member States of chief industrial importance (of which Canada is one) holds a permanent place, and the other 10 government representatives are elected triennially by the Conference. The worker and employer members are elected by their groups every three years at the Conference. The Governing Body meets three times a year and has supervision over the work of the International Labour Office and the various Conferences and Committees, in addition to framing the budget and approving the agendas of the Conferences and meetings. Canada's representative on the Governing Body is G. V. Haythorne, Assistant Deputy Minister of Labour for Canada.

There have been 42 Sessions of the International Labour Conference, at which 111 Conventions and 111 Recommendations have been adopted, covering a wide range of subjects such as industrial relations, freedom of association, hours of work, weekly rest, holidays with pay, minimum wages, night work of women and young persons, industrial health and safety, workmen's compensation, conditions of work for seamen and dockers, unemployment and health insurance, protection of migrant workers, equal remuneration, discrimination, forced labour, and many other aspects of industrial and social problems. By November 1958 the ratifications of Conventions by Member States totalled 1,852.

Canada has ratified 18 ILO Conventions, of which 12 concern maritime and dock labour. In Canada the provincial legislatures are the competent legislative authorities with jurisdiction over the subjects covered by most of the ILO Conventions and Recommendations. The Department of Labour, as the official liaison agency with the International Labour Organization, is responsible for forwarding to the ILO Office annual reports on ratified Conventions as well as periodical reports on many other industrial and social matters. Canada is represented at most of the ILO annual and special meetings, and accounts of the discussions and the decisions are regularly published in the *Labour Gazette*. The Department also keeps the provincial governments and the major employer and worker organizations informed of ILO activities.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The physiographic and population characteristics of Canada present unusual difficulties from the standpoint of transportation. The country extends 4,000 miles from east to west and its main topographic barriers run in a north-south direction, so that sections of the country are cut off from one another by such water barriers as Cabot Strait and the Strait of Belle Isle separating the Island of Newfoundland from the mainland; by areas of rough, rocky forest terrain such as the region lying between New Brunswick and Quebec, and the areas north of Lakes Huron and Superior dividing the industrial region of Ontario and Quebec from the agricultural areas of the Prairie Provinces; and by the mountain barriers between the prairies and the Pacific Coast. Unevenly distributed along a narrow southern strip of Canada's vast area is its relatively small population of 17,048,000 (estimate of June 1, 1958). To such a country, with a population so dispersed and producing for export as well as for consumption in distant parts of the country itself, efficient and economical transportation facilities are necessities of existence.

The extent of government control over the agencies of transportation is covered in Part I of this Chapter; Parts II to VI deal with the various types of transport facility.

PART I.—GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION

The Federal Government's control and regulation of transportation reflect to a considerable extent conditions that date back to the period when the railways possessed a virtual monopoly of transportation within the country. Although federal regulation was a direct outcome of such particular matters as the prevention of unjust discrimination in rates and charges resulting from monopoly conditions in the industry and the safety of

transportation facilities and operating practices, yet the railways have been so involved in the public interest that their regulation has been extended to become the most comprehensive of any industry in Canada.

In the meantime, conditions in the transportation industry have been drastically altered by the increasing competition arising from the advance of highway transportation. Unlike the competition that existed between railways in early stages of their development, today's competition shows little indication of starting a trend toward consolidation and a return to semi-monopolistic conditions within the industry. Because so many shippers now provide their own transportation, it is evident that a large part of the present competition between common carriers has become a permanent feature of the transportation industry.

It is not surprising that regulations, which under monopoly conditions were not onerous to the railways or were purely nominal in their effect, are now alleged to have become increasingly restrictive and hampering under highly competitive conditions. Regulatory authorities are therefore faced with the problem of piecemeal revision of their regulations—retaining those where railway monopoly or near-monopoly conditions still make them necessary in the public interest, and relaxing those where competition can be relied on to protect the public in order to enable the railways to meet this competition more effectively. The emphasis has shifted from the regulation of monopoly to maintaining a balance between the several competing modes of transport. Indicative of this trend is the amendment to the Transport Act passed in 1955, which extends the freedom of the railways to make contract rates with shippers known as 'agreed charges'.

On Nov. 2, 1936, the amalgamation of the Department of Railways and Canals and the Department of Marine, together with the Civil Aviation Branch of the Department of National Defence to form the new Department of Transport brought under one control railways, canals, harbours, marine and shipping, civil aviation, radio and meteorology.

Road and highway development is mainly under provincial or municipal control or supervision. According to the judgment of the Judicial Committee of the Privy Council dated Feb. 22, 1954, jurisdiction over interprovincial and international highway transport rests with the Federal Government. Federal and provincial representatives conferred at Ottawa in April 1954 on means of implementing that decision and on June 26, 1954, the Motor Vehicle Transport Act was passed by the Federal Parliament giving to all provinces, at their option, the authority to apply to interprovincial and international highway transport the same regulations respecting certificates of public convenience and necessity and rates as they apply to undertakings operating entirely within the province. This Act has since been proclaimed in seven provinces.

The Board of Transport Commissioners for Canada.—The Board of Transport Commissioners for Canada was created and initially named the Board of Railway Commissioners for Canada by the Railway Act 1903, and was given its present name by the Transport Act 1938. It was organized on Feb. 1, 1904, and succeeded to all the powers and duties of its predecessor, the Railway Committee of the Privy Council. It was also given additional powers and duties which have been greatly enlarged since that date. When organized, the membership of the Board consisted of a Chief Commissioner, Deputy Chief Commissioner and one Commissioner. In 1908 an Assistant Chief Commissioner and two other Commissioners were added. The Board is a statutory court of record, so constituted by the Railway Act and recognized as such by other courts, but it also has extensive regulative and administrative powers.

The great majority of applications and complaints to the Board are disposed of without hearing in open court, but public hearings are held in various places throughout Canada as the Board sees fit, particularly to suit the convenience of the parties and avoid expense to them. Evidence at public hearings is given under oath and interested parties appear personally or by counsel or representatives. The finding or determination of the Board upon any question of fact within its jurisdiction is binding and conclusive and no order or decision may be questioned or reviewed except on appeal to the Supreme Court of

Canada upon a question of law or a question of jurisdiction with leave of a Judge of that Court, or by the Governor in Council.* Two Commissioners are a quorum or 'panel' for the hearing of a case and it is not unusual for two panels to be sitting at the same time on different appeals.

The Board has jurisdiction under more than a score of Acts of Parliament, including jurisdiction under the Railway Act, Transport Act and Pipe Lines Act, over transportation by railway and by inland water; over communication by telephone and telegraph; and over the transmission of oil and natural gas by interprovincial or international pipelines.

Under the Railway Act its jurisdiction is, stated generally, in respect of construction, maintenance and operation of railways that are subject to the legislative authority of the Parliament of Canada, including matters of engineering, location of lines, crossings and crossing protection, safety of train operation, operating rules, investigation of accidents, accommodation for traffic and facilities for service, abandonment of operation, freight and passenger rates, and uniformity of railway accounting. The Board also has certain jurisdiction over telephones and telegraphs, including regulation of the telephone tolls of The Bell Telephone Company of Canada, the British Columbia Telephone Company, the Quebec and Gaspé Telephone Company and the Yellowknife Telephone Company, and over express traffic and tolls for the use of international bridges and tunnels.

The Board has jurisdiction to inquire into, hear and determine any application by any party interested who complains that any company or person has violated or failed to comply with the Railway Act or a Special Act or any Order made thereunder, or who requests the Board to make any order or give any direction, leave, sanction or approval that, by law, it is authorized to make or give or with respect to any matter, act or thing that by the Railway Act or Special Act is prohibited, sanctioned or required to be done. It has power to make orders and regulations generally for carrying the Railway Act into effect and for exercising jurisdiction conferred on the Board by any other Act.

Regulation of railway freight and passenger rates is one of the Board's principal tasks. Except for certain statutory rates, it has power "to fix, determine and enforce just and reasonable rates, and to change and alter rates as changing conditions or cost of transportation may from time to time require"; it may disallow any tariff that it considers to be unjust or unreasonable or contrary to any provision of the Railway Act; it may prescribe other tolls in lieu of the tolls disallowed, or require the railway company to substitute a tariff satisfactory to the Board. Since the end of World War II there has been a succession of applications for authority to make general freight rate increases and general telephone rate increases.

A review of transport regulation was undertaken by the Royal Commission on Transportation, under the chairmanship of the Hon. W. F. A. Turgeon, which held extensive hearings in 1949-50 and issued its Report in 1951. (See 1952-53 Year Book, p. 741.) Certain of its recommendations, including the following, were incorporated into the Railway Act by amendments made in 1951: the equalization of freight rates; the requirement that, when transcontinental competitive freight rates are published, the corresponding rates to intermediate points shall not be more than one-third greater than the former; the payment by the Government of Canada of the cost of maintaining the so-called 'bridge' lines of the transcontinental railway systems in Ontario (between Sudbury, Capreol and Cochrane, and between Port Arthur and Armstrong) up to the amount of \$7,000,000 annually, the amounts so received by the railways to be applied to reductions in freight rates between Eastern and Western Canada over the trackage referred to; and the requirement of a uniform classification of accounts to be prescribed by the Board of Transport Commissioners for the Canadian Pacific Railway and the Canadian National Railways. Pursuant to the amendments, a uniform scale of mileage class rates has been prescribed by the Board and equalization of commodity rates is being proceeded with. The Board has also prescribed a uniform classification and system of accounts for railways and has approved a new freight classification.

* The Board's judgments are reported in *Canadian Railway Cases* and *Canadian Railway and Transport Cases*, and its judgments, orders, rulings and regulations are published fortnightly by the Queen's Printer, Ottawa, in what is known as *J.O.R. & R.*

Under the Transport Act the Board entertains applications for licences for ships to transport goods or passengers for hire or reward between places in Canada on the Great Lakes and the Mackenzie and Yukon Rivers, except goods in bulk on waters other than the Mackenzie River. Before granting a licence the Board must be satisfied that public convenience and necessity require such transport. The Board also has regulative powers over tolls for such transport.

'Agreed charges' between shippers and carriers, authorized by the Transport Act, were also reviewed by the Hon. W. F. A. Turgeon in 1955 and his recommendations were implemented in amendments to that Act in 1955. Under the amendments, an agreement for an agreed charge shall be executed in tariff form and a duplicate original shall be filed with the Board within seven days after the making of the agreement, and the agreed charge takes effect twenty days after the filing, without necessity of the Board's approval of the charge. The Board continues to have power to fix a charge for a shipper who is unjustly discriminated against by an agreed charge and it also has power to vary or cancel an agreed charge referred to it by the Minister of Transport or the Governor in Council for investigation.

Leave of the Board is necessary, under the Pipe Lines Act, for construction of an interprovincial or international gas or oil pipeline. The Board has granted leave to construct such major pipelines as the Trans-Canada natural gas line, the Westcoast Transmission gas line, the Interprovincial oil line, the Trans Mountain oil line and the Trans-Northern oil products line. In considering applications of this kind the Board has regard, among other things, to public interest, financial responsibility of the applicant company and the economic feasibility of the project. It may make orders and regulations for the protection of property and safety in the operation of pipelines. It may also make orders and regulations with respect to all matters relating to traffic, tolls and tariffs of oil pipelines, but it does not have similar powers over gas pipelines. It may declare an oil pipeline company to be a common carrier and may prescribe a uniform system of accounts for pipeline companies.

The Board is required by the Railway Act to make an annual report to the Governor in Council through the Minister of Transport. Copies may be obtained from the Secretary.

The Air Transport Board.—The Air Transport Board was established in September 1944 by amendment to the Aeronautics Act. Subsequent amendments to the Act were made in 1945, 1950 and 1952. The Board has three members including the Chairman, and the staff comprises an Executive Director's Branch including Legal, International Relations, and Traffic Divisions, and a Secretary's Branch including Administrative and Licensing and Inspection Divisions. A Special Projects Division has recently been established.

The Board is responsible for the economic regulation of commercial air services in Canada and is also required to advise the Minister of Transport in the exercise of his duties and powers in all matters relating to civil aviation. The regulatory function relates to Canadian air services within Canada and abroad and to foreign air services operating into Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public. As provided by the Act, the Board issues Regulations, approved by the Governor in Council, dealing with the classification of air carriers and commercial air services, applications for licences to operate commercial air services, accounts, records and reports, ownership, transfers, consolidations, mergers and leases of commercial air services, traffic tolls and tariffs, and other related matters. Detailed regulatory instructions are issued by the Board in the form of General Orders, published in the *Canada Gazette*, relating to all air services or groups of air services; Board Orders relating to individual air services; and Rules and Circulars for general guidance and information.

Financial and operating statistics are collected under authority of the Board's Regulations by the Economics Division of the Department of Transport.

The Board is currently devoting special attention to the publication of a revision of the uniform charter tariff and to the formulation of basic principles for the guidance of operators in the establishment of their rates and fares. Helicopter operations are under constant review by an economic and technical committee set up for the purpose.

In the field of international aviation, the Board continues to take an active part in the work of the International Civil Aviation Organization, a member of its staff being the representative of Canada on the Council.

Canadian Maritime Commission.—By authority of an Act of Parliament (R.S.C. 1952, c. 38) passed in 1947, the Canadian Maritime Commission was constituted for the purpose of examining into, keeping records of, and advising the Minister of Transport on matters pertaining to Canadian shipping and shipbuilding services. In addition to these duties, the Act empowers the Commission to:—

- (1) exercise and perform on behalf of the Minister such powers, duties and functions of the Minister under the Canada Shipping Act 1934, as the Minister may require;
- (2) administer, in accordance with regulations of the Governor in Council, any steamship subventions voted by Parliament; and
- (3) exercise or perform any other powers, duties or functions conferred on or required to be performed by the Commission by or pursuant to any other Act or order of the Governor in Council.

PART II.—RAIL AND URBAN TRANSPORT*

Section 1.—Railways

Since Confederation the railways of Canada have been the principal utility for the movement of passengers and freight throughout, and beyond, the nation. The two great national systems, supplemented by a few regional independent railways, are the only carriers able to transport large volumes at low cost in all weather by continuous passage over Canadian transcontinental routes. Though highway and air competition is increasing, the railways still retain their primary position in the transport field.

The two national railway companies control a wide variety of Canadian and international transport and communication services. The government-owned Canadian National Railway System is the country's largest public utility and operates the greatest length of trackage in Canada. In addition, it operates a fleet of coastal and ocean-going steamships, a national telegraph system connecting the principal points of Canada with other parts of the world, an extensive express service in Canada and abroad, a chain of large hotels and resorts, and a scheduled air service connecting all major cities across the country and Canadian with other North American and European points. Its chief competitor, the Canadian Pacific Railway, is a joint-stock corporation operating an extensive transcontinental railway supported by a national telegraph system with connections throughout the world, a large fleet of inland, coastal and ocean-going vessels, a chain of year-round and resort hotels, a domestic north-south airline which is one of the world's great air-freight carriers, a transpacific airline service to the Orient and the Antipodes, air services to Mexico, Peru, Chile and Argentina, a transpolar air route connecting Vancouver and Amsterdam, a transatlantic service to Lisbon, and a limited (one-flight daily each way) transcontinental air service between Vancouver and Montreal. Also included in the company's operations are a world-wide express service and a domestic truck and bus network.

The statistics of Subsections 1 to 3 of this Section cover the combined railway facilities of all companies operating in Canada, including intercity freight and passenger services of electric railway companies. Details relating to the Canadian National Railway System are dealt with separately in Subsection 4. A special article covering the consolidation and organization of the CNR appears in the 1955 Year Book at pp. 840-847.

* Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics; more detailed information is given in the annual reports of the Division. Certain of the financial statistics were compiled in co-operation with the Department of Transport.

Subsection 1.—Milage and Equipment

Construction was begun in 1835 on the first railway in Canada—the short link of 14.5 miles between Laprairie and St. Johns, Que.—but only 66 miles were in operation by 1850. The first great period of construction was in the 1850's when the Grand Trunk and the Great Western Railways were built as well as numerous smaller lines. The building of the Intercolonial and the Canadian Pacific Railways contributed to another period of rapid expansion in the 1870's and 1880's. In the last period of extensive railway building (1900-1917), the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed.

Only a gradual increase has taken place in the milage of single track line since the 1920's. Recently, however, the development of a number of large industrial projects in districts far removed from transport facilities has necessitated the building of branch lines. Those constructed up to 1956 are listed in the 1957-58 Year Book at p. 815. In 1957, three new branches were added to the Canadian National System: in Quebec, a 161-mile line from Beattyville to Chibougamau was placed in operation, linking this mineral-rich area with the industrial centres of the province; in New Brunswick, a 23-mile line was completed between Bartibog and the base-metal development at Heath Steele; in Manitoba, the CNR took over a new 31-mile line from Sipiwesk on the Hudson Bay line to the International Nickel Company development at Thompson. Still in the surveying stage was a branch line from Optic Lake to Chisel Lake in northern Manitoba, a distance of 52 miles. The Pacific Great Eastern Railway in British Columbia, with rail facilities extending 466 miles from Vancouver to Prince George, in 1958 officially opened 262 miles of track between Prince George and Fort St. John and 61 miles between Chetwynd and Dawson Creek (Little Prairie).

While new construction has added considerably to single track milage placed in operation in the past few years, other lines have been abandoned because they have become unprofitable so that new milage is not altogether reflected in the totals shown in Table 1. The British Columbia Electric Railway Company reported rail transport information for the first time in 1957 and contributed 103 miles of first main track milage to the total for that year.

1.—Railway Track Milage Operated, 1900-57

NOTE.—Figures of total milage of single track operated for 1835-1909 are given in the 1941 Year Book, p. 546; for 1911-14 in the 1954 edition, p. 786; for 1916-24 in the 1955 edition, p. 830; and for 1925-49 in the 1956 edition, p. 792.

¹ Newfoundland included from 1950.

² Includes 45 miles of joint track.

Rolling-Stock.—The figures in Table 2 may be supplemented by the statement that between 1949 and 1957 the average capacity of box cars increased from 43.5 tons to 46.4 tons and of gondola cars from 61.5 tons to 65.3 tons, flat cars from 42.9 tons to 46.1 tons, hopper cars from 58.7 tons to 65.8 tons and of all freight cars from 45.3 tons to 50.3 tons. The average tractive power of locomotives advanced during the same period from 41,923 lb. to 50,768 lb. The changeover to diesel operation is indicated by the decrease in steam locomotives and the increase in oil-burning and diesel locomotives in operation.

¹ Includes one gasoline locomotive, not specified as to type.

² Includes 13 cars not specified as to type.

³ Includes 20 cars

Subsection 2.—Finances

The tables in this Subsection give information on capital liability and capital investment, earnings, operating expenses, employees and their earnings and government aid to all railways.* Financial statistics of government-owned railways are given separately and in detail in Subsection 4. A Uniform Classification of Accounts for common carriers became effective for the Canadian National and the Canadian Pacific Railways on Jan. 1, 1956, and for all other railways on Jan. 1, 1957. In transportation statistics a distinction is made between expenditures and expenses. In this Section, the term 'expenses' is used as defined in the Uniform Classification of Accounts and refers to the expenses of furnishing rail transportation service and of operations incident thereto, including maintenance and depreciation of the plant used in such service.

Capital Liability and Investment.—The capital liability of railways operating in Canada for the years 1938 to 1957 is shown in Table 3. The increase of \$145,026,029 in 1957 over 1956 compares with an increase in investment in road and equipment property of \$413,783,016 as shown in Table 4.

* Statistics for individual railways are given in DBS annual report, *Railway Transport*, published in five parts.

3.—Capital Liability of Railways, 1938-57

NOTE.—Figures for 1876 to 1925 are given in the 1927-28 Year Book, p. 649, and those for 1926-37 in the 1947 edition, p. 662.

(Exclusive of Canadian railway capital owned by Canadian railways)

¹ Prior to 1956 and the new Uniform Classification of Accounts, these data included investments in separately operated property, leased lines and non-cash items.
² Includes \$121,230,690 invested in the Quebec North Shore and Labrador Railway which reported for the first time in 1955.

Revenues and Expenses.—During the ten-year period 1948-57, the ratio of expenses to revenues of railways operating in Canada has fluctuated between a low of 86.94 p.c. in 1950 and a high of 95.24 in 1957. The trend for both revenues and expenses has been generally upward during the period, revenues being 44.2 p.c. higher in 1957 than in 1948 and expenses 48.9 p.c. higher. As a result of outlay increasing more rapidly than income, net operating revenue per mile of line in 1957 was at its lowest point since 1938.

5.—Operating Revenues and Expenses of Railways, 1948-57

NOTE.—Operating revenues and expenses from 1875 are given in previous editions of the Year Book beginning with the 1916-17 edition.

¹ Reported as operating expenses in accordance with the Uniform Classification of Accounts adopted in 1956.

Employment and Salaries and Wages.—In the period 1948-57 the number of railway employees increased 11.8 p.c. and their salaries and wages advanced 54.6 p.c. Maintenance-of-equipment employees, on hourly rates, worked 14 p.c. fewer hours and were paid 76 p.c. more wages per hour; average hours worked by transportation employees were 8 p.c. fewer, while their pay per hour was about 65 p.c. higher. These figures reflect salary and wage increases and the effects on employment of the five-day work week inaugurated in 1951. Statistics for 1956 and 1957 have been reported in accordance with the "Canadian Classification of Railway Employees and Their Compensation" which became effective Jan. 1, 1956.

7.—Railway Employees and Their Earnings, 1948-57

NOTE.—Figures include employees and wages for 'outside' operations amounting to from 3 to 6 p.c. of total employees and from 2 to 5 p.c. of total salaries and wages. Figures for 1912-39 are given in the 1941 Year Book, p. 551, and for 1940-47 in the 1951 edition, p. 723.

transport (rail) operations.

² Includes employees engaged in cartage and highway

Government Aid to Railways.—In order that the private railways of Canada might be constructed in advance of settlement as colonization roads or through sparsely settled districts where little traffic was available, it was necessary for federal and provincial governments and even for municipalities to extend some form of assistance. The form of aid was usually a bonus of a fixed amount for each mile of railway constructed and, in the early days, grants of land were also made other than for right-of-way. As the country developed, objections to the land-grant method became increasingly apparent and aid was given more frequently in the form of a cash subsidy for each mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that System, except those for rolling-stock, have been guaranteed by the Federal Government. No new land grants or cash subsidies have been advanced by either the federal or provincial governments since 1939.

During the era of railway expansion before 1918, provincial governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railway System. These bonds as they mature or are called are paid off by the Canadian National Railways, in large measure, through funds raised by the issue of new bonds with Federal Government guarantee. Bonds guaranteed by the Governments of New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia have been eliminated in this manner in recent years. Railway bonds guaranteed by the Government of Canada at Dec. 31, 1957, amounted to \$730,248,955; this amount does not include \$97,756 perpetual debenture stock and guaranteed stock of the former Grand Trunk Railway, now part of the Canadian National Railway System, on which interest and dividends are guaranteed by the Federal Government.

Subsection 3.—Traffic

Table 8 shows passenger and freight statistics for all railways for the years 1948-57. A separate analysis of the operations and traffic of the Canadian National Railways is given at p. 786.

8.—Statistics of Passenger and Freight Services and Revenue Receipts, 1948-57

NOTE.—Figures for 1910-47 are given in the corresponding table of previous Year Books beginning with the 1922-23 edition.

included for this and subsequent years.

² Duplications included.

³ Newfoundland

⁴ Includes caboose miles but excludes miles made in passenger and non-revenue trains.

⁵ Excludes traffic handled by more than one railway; see Table 9 for details of freight carried.

There was 8.2 p.c. less revenue freight carried on the railways in 1957 than in 1956. Each of the main commodity groups showed a decrease—agricultural products were down by 18.4 p.c., forest products 12.2 p.c., animals and animal products 7.0 p.c., mine products 6.2 p.c., and manufactures and miscellaneous products 3.0 p.c. Only five of the

individual commodities increased—shipments of crushed, ground or broken stone were almost 78 p.c. higher than in 1956 and small gains were recorded in freight shipments of flour, livestock, coke and iron and steel. Of the 174,044,161 tons moved in 1957, mine products accounted for 42.1 p.c., manufactures and miscellaneous products for 30.9 p.c., agricultural products 16.3 p.c., forest products 9.6 p.c., and animals and animal products 1.1 p.c.

9.—Commodities Hauled as Freight on Railways, 1954-57

NOTE.—In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National Railways, but the link of the Canadian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of United States railways.

Commodity	1954	1955	1956	1957

¹ Less than carload lots.

Railway Accidents.—The figures given in Tables 10 and 11 of persons killed or injured on railways include those involved in both train and non-train accidents. All passengers injured are included in the figures but, for employees, only those that kept the employee from his work for at least three days during the ten days following the accident are recorded.

10.—Passengers, Employees and Others Killed or Injured on Railways, 1948-57

NOTE.—Figures for 1919-47 are given in the corresponding tables of previous Year Books beginning with the 1922-23 edition.

¹ Includes postal, express and pullman employees, trespassers and others.
from Apr. 1, 1949.

² Newfoundland included

Accidents tabulated include all those in which railway trains were involved and accidents on railway property. The classification of accidents used for DBS vital statistics treats collisions between motor vehicles and trains as motor vehicle accidents; provincial statistics also class them as motor vehicle accidents and consequently adjustments should be made when compiling total accidental deaths of all kinds or comparing results of accidents of different kinds, such as train and motor vehicle.

Subsection 4.—The Canadian National Railway System*

In view of the interest in Canada's publicly owned railway, the Canadian National Railway System is given separate treatment in this Subsection. Its history is presented in a special article published in the 1955 Year Book at pp. 840-847. More detailed information than can be given here is obtainable from DBS annual report, *Canadian National Railways*.

Financial Statistics.—The original financial structure of the CNR and the steps taken through the Capital Revision Acts of 1937 and 1952 to alleviate the burden of interest debt undertaken by the company on its formation in 1923 are described in the special article mentioned above. Briefly, the Capital Revision Act of 1937 wrote off all loans that had been made to cover deficits and also unpaid interest on loans, and certain loans made for the purpose of additions and betterments were converted to equity capital, relieving the CNR from paying fixed charges on this amount. Under the 1952 Capital Revision Act, 50 p.c. of the company's interest-bearing debt was changed to preferred stock on which, after settling income taxes, a dividend of 4 p.c. is paid on earnings. Also for a term of ten years ending Dec. 31, 1961, the Railway is not obliged to pay interest on \$100,000,000 of its long-term debt. The Government is authorized to buy additional preferred stock annually in amounts related to the company's gross revenues. As a consequence, the proportion of total capitalization represented by equity capital in shareholders' account was raised from 34.5 p.c. at Dec. 31, 1951, to 67.2 p.c. at Jan. 1, 1952, and the proportion of borrowed capital was correspondingly reduced.

12.—Capital Structure of the Canadian National Railway System as at Dec. 31, 1948-57

NOTE.—Information is given in greater detail in DBS report, *Canadian National Railways*.

¹ Includes acquisition adjustment—U.S. lines (\$3,776,424).² Includes temporary cash investments.³ Includes balance receivable from Government of Canada on deficit account.

The financial details presented in Table 14 are those of the entire Canadian National System, including both Canadian and United States operations. Revenues and expenses include those of express and commercial communications throughout, and highway transport (rail) operations from 1956. In conformity with the requirements of the Uniform Classification of Accounts, tax accruals and rents have been charged to operating expenses since Jan. 1, 1956.

14.—Total Revenue, Operating Expenses, Net Revenue, Fixed Charges and Deficits of the Canadian National Railway System¹, 1948-57

NOTE.—Figures for 1911-25 are given in the 1936 Year Book, p. 660; for 1926-39 in the 1942 Year Book, p. 590; and for 1940-47 in the 1951 edition, p. 731.

¹ Includes electric lines.

² Excludes work service.

Section 2.—Express Companies

Express, which is actually expedited freight carried on passenger trains, is one of the services provided by companies which do not own the means of conveyance but use the facilities of railway companies under contract. The majority of such contracts provide for payment to the railways of a fixed percentage of the gross express revenue.

Express companies are organized under authority of federal legislation and their business concerns the rapid transit of valuable or perishable commodities and animals, the delivery of parcels and the issuing of financial papers, money orders, travellers cheques and letters of credit. Express rates are usually much higher than freight rates and the two services are not normally competitive. Both tariffs are subject to the approval of the Board of Transport Commissioners.

Five express organizations operate in Canada—four Canadian and one American. The Canadian Pacific Express Company is a subsidiary of the Canadian Pacific Railway Company and handles the express business on the railways and the inland and ocean steamship lines of the parent company. The express business of the Algoma Central and Hudson Bay Railway, the Canadian National Railway System, and the Northern Alberta Railways is handled by departments of the respective railways. The Railway Express Agency, Incorporated, of the United States, operates over the Canadian sections of United States railways and over the route from Skagway in Alaska to points in Yukon Territory. Operations of the Algoma Central and Hudson Bay Railway express department were reported for the first time in 1957. No statistics are available on the volume of express traffic because much of it consists of parcels and small lots that cannot be classified.

16.—Summary Statistics of Express Companies, 1948-57

Section 3.—Urban Transit Systems

The collection of statistical information on urban transportation systems has been extensively reorganized. Because of the drastic changes made in recent years in types of vehicles used for mass passenger movement in urban centres, the statistical series that began with the financial and operating statistics of electric railways and later included their motor bus and trolley coach lines, became quite inadequate.

Statistics of urban transit operations were previously contained in part in each of three statistical series: the monthly *Transit Report*, and the annual *Electric Railways and Motor Carriers*, *Freight-Passenger* reports. By 1954 it had become apparent that these reports dealt with four distinct and separate industries—the passenger bus industry, the urban transit industry, the intercity electric railway industry, and the motor carrier-freight industry—and that revision was necessary. As a first step, companies reporting 1954 statistics for the monthly transit report were divided into two groups on the basis of predominant type of operation, i.e., either urban transit or passenger bus (intercity and rural). Companies receiving more than 50 p.c. of their revenue from urban transit operations were defined as “Urban Transit” and those receiving more than 50 p.c. from intercity and rural passenger bus traffic were classified as “Passenger Bus (intercity and rural)”. Starting January 1955, separate monthly reports were produced for the urban transit and the passenger bus industries.

During 1955, a similar examination was made of companies reporting statistics for the annual reports *Electric Railways and Motor Carriers*, *Freight-Passenger*. The former presented data for companies which operated or had at one time operated electric rail lines including urban streetcars, most of which had become strictly urban transit carriers using trolley coaches and motor buses. A new classification of these companies was made, also based on the predominant characteristic of their operations, i.e., either urban transit or electric railway (intercity and rural). Data for the latter group, which numbered five in 1957, is now included in the *Railway Transit* series of reports; data for the companies whose operations are predominantly urban are included in the monthly and annual series on Urban Transit statistics; and the *Electric Railways* report was discontinued with the 1955 publication.

The companies reporting to the *Motor Carriers*, *Freight-Passenger* series formerly included those engaged in passenger bus operations, both urban and intercity and rural, as well as freight carriers. The operations of those companies are now being reported in the *Passenger Bus (intercity and rural)* series, the *Urban Transit* series, or the *Motor Carriers*, *Freight-Passenger* series, depending on the predominant characteristic of their operations. Thus, the annual *Urban Transit* report for 1956 contains, for the first time on a separate basis, statistics for the industry as a whole, including operations of electric railways, subways, motor buses, and trolley coaches carrying passengers in urban and suburban service.

PART III.—ROAD TRANSPORT*

◆ Highways and motor vehicles are herein treated as related features of transportation. An introductory section summarizes provincial regulations regarding motor vehicles and motor traffic.

Section 1.—Provincial Motor Vehicle and Traffic Regulations†

NOTE.—It is obviously impossible to include here the great mass of detailed regulations in force in each province and territory; only the more important general information is given. The source of information for detailed regulations for each province and territory is given at p. 792.

The registration of motor vehicles and the regulation of motor vehicle traffic lies within the legislative jurisdiction of the provincial and territorial governments. Regulations common to all provinces and territories are summarized under the following headings.

Operators' Licences.—The operator of a motor vehicle must be over a specified age, usually 16 years (17 in Newfoundland and Quebec, and 18 in Alberta), and must carry a licence, obtainable in most provinces only after prescribed qualification tests and renewable annually, except in Alberta and British Columbia where it is renewable every five years, and in Manitoba where it is renewable every two years. Special licences are required for chauffeurs in all provinces except Newfoundland and in some jurisdictions special licences may be granted to those who have not reached the specified age.

* Except as otherwise indicated, the material in this Part has been revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

† The information in this Section has been revised from material provided by the officials in charge of the administration of motor vehicle and traffic Acts and Regulations in the individual provinces and territories.

Motor Vehicle Regulations.—In general, all motor vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the back of the vehicle (one only for the back of trailers). In most provinces in event of sale the registration plates stay with the car but in Manitoba and Saskatchewan the plates are retained by the owner. A change of ownership of the vehicle must be recorded with the registration authority. However, exception from registration is granted for a specified period (usually at least 90 days, except in Quebec where the maximum is 90 days and British Columbia where it is six months) in any year to visitors' private vehicles registered in another province or a state that grants reciprocal treatment. Regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes and stipulate that equipment include non-glare headlights, a proper rear light, a muffler, a windshield wiper, a rear-vision mirror, and a warning device.

Traffic Regulations.—In all provinces and territories, vehicles keep to the right-hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. The speed limit in most provinces is 50 miles an hour except in Quebec where it is 60, in Manitoba and Alberta where it is 60 in daytime and 50 at night, and in Nova Scotia where the limit is a "reasonable and prudent" speed, with a maximum of 60 miles an hour. Slower speeds are always required in cities, towns and villages, when passing schools and public playgrounds, at road intersections, railway crossings, or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. In almost all provinces truck speed limits are at least five miles an hour below automobile speed limits. Motor vehicles must not pass a streetcar that has stopped to take on or discharge passengers except where safety zones are provided. In all provinces accidents resulting in personal injury or property damage of \$100 or more must be reported to a provincial or municipal police officer and a driver involved must not leave the scene of an accident until he has rendered all possible aid and disclosed his name to the injured party.

Penalties.—Penalties ascend in scale from small fines for minor infractions of any of the regulations to suspension of the operator's driving permit, impounding of the car, or imprisonment for serious infractions, recklessness, driving without an operator's licence, and especially for attempting to operate a motor vehicle while intoxicated.

Safety Responsibility Legislation.—Each province of Canada has enacted legislation under this heading (sometimes referred to as financial responsibility legislation). In general, these laws provide for the automatic suspension of the driver's licence and motor vehicle permit of a person convicted of an offence arising out of a motor vehicle accident, or a person involved directly or indirectly in an accident who is not covered for third-party insurance at the time of the accident. The suspension remains effective until any penalty or judgment has been satisfied and proof of financial responsibility for the future is filed. In Manitoba, Saskatchewan, Alberta and British Columbia, uninsured motor vehicles may be impounded following an accident of any consequence, i.e., an accident resulting in personal injury or death, or property damage in excess of \$100 (\$200 in Saskatchewan).

Although safety responsibility legislation has not been enacted in either the Yukon Territory or the Northwest Territories, the Motor Vehicle Ordinances of the two Territories require the owner of a motor vehicle to submit evidence of stipulated insurance coverage on such vehicle before he can obtain registration.

Unsatisfied Judgment Funds.—In recent years a new type of motor vehicle legislation has been enacted in all provinces except Quebec and Saskatchewan and in the Territories. This has usually taken the form of an amendment to the motor vehicle laws of the province and provides for the establishment of an Unsatisfied Judgment Fund, out of which are paid judgments awarded for damages arising out of motor vehicle accidents in the province which cannot be collected in the ordinary process of law. The Fund is created by the collection annually of an Unsatisfied Judgment Fund fee from the registered owner of every motor vehicle or from every person to whom a driver's licence is issued, except in

British Columbia and in Nova Scotia where the Fund is maintained by insurance companies. This fee does not exceed \$1 per annum except that Ontario collects \$5 from each uninsured owner of a motor vehicle at the time of registration. A feature of this legislation which is contained in some provincial statutes provides for the payment of judgments in the so-called 'hit-and-run' accidents. When these occur, if neither the owner nor the driver can be identified, action may be taken against the Registrar of Motor Vehicles; any judgment secured against the Registrar is paid out of the Fund. All of these laws contain a provision limiting the amount that can be paid out of the Fund on one judgment. In Ontario, Alberta and British Columbia the limits are \$10,000 for one person and \$20,000 for two or more persons injured in one accident. Ontario and Alberta provide for claims up to \$2,000 for property damage. In Manitoba the legal limits are \$10,000, \$20,000 and \$1,000, respectively, while other provinces retain lower limits of \$5,000, \$10,000 and \$1,000. For hit-and-run accidents payments are made for personal injuries or death only.

Sources of information for provincial motor vehicle and traffic regulations:—

Newfoundland

Administration.—Deputy Minister of Highways, St. John's.

Legislation.—The Highway Traffic Act, 1951, as amended.

Prince Edward Island

Administration.—The Provincial Secretary, Charlottetown.

Legislation.—The Highway Traffic Act (R.S.P.E.I. 1951, c. 73).

Nova Scotia

Administration.—Motor Vehicle Branch, Department of Highways, Halifax.

Legislation.—The Motor Vehicle Act (1954, c. 184) as amended, and the Motor Carrier Act (R.S.N.S. 1923, c. 78) as amended.

New Brunswick

Administration.—Motor Vehicle Division, Provincial Tax Branch, Department of Provincial Secretary-Treasurer, Fredericton.

Legislation.—The Motor Vehicle Act (R.S.N.B. 1955) as amended.

Quebec

Administration.—Motor Vehicle Service, Provincial Revenue Offices, Parliament Bldgs., Quebec.

Legislation.—The Motor Vehicles Act (R.S.Q. 1941, c. 142) as amended.

Ontario

Administration.—Motor Vehicles Branch, Department of Transport, Toronto.

Legislation.—The Highway Traffic Act (R.S.O. 1950, c. 167), the Public Vehicles Act (R.S.O. 1950, c. 322) and the Public Commercial Vehicles Act (R.S.O. 1950, c. 304).

Manitoba

Administration.—Minister of Public Utilities, Winnipeg.

Legislation.—The Highway Traffic Act (R.S.M. 1954, c. 112) as amended.

Saskatchewan

Administration.—Treasury Department, Highway Traffic Board, Revenue Building, Regina.

Legislation.—The Vehicles Act, 1957.

Alberta

Administration.—Motor Vehicle Branch, Department of Highways, Edmonton.

Legislation.—The Vehicles and Highway Traffic Act (R.S.A. 1955, c. 356) as amended, the Motor Vehicles Accident Indemnity Act (R.S.A. 1955, c. 209) as amended, the Public Service Vehicles Act (R.S.A. 1955, c. 265), and Rules and Regulations.

British Columbia

Administration and Legislation.—Enforcement of the Motor Vehicle Act, the Highway Act and the Motor Carrier Act is vested in the Royal Canadian Mounted Police and the various municipal police forces. The Highway Act is administered by the Minister of Highways, the Motor Carrier Act by the Public Utilities Commission, and the Motor Vehicle Act by the Superintendent of Motor Vehicles, Victoria, B.C.

Yukon Territory

Administration.—Commissioner of the Yukon Territory, Whitehorse, Y.T. Information regarding regulations may also be obtained from the Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa.

Legislation.—The Motor Vehicle Ordinance (1957, First Session, c. 1) as amended.

Northwest Territories

Administration.—Commissioner of the Northwest Territories. Address communications to the Director, Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa.

Legislation.—The Motor Vehicles Ordinance (1956, c. 72) as amended.

Section 2.—Highways and Roads

The populated sections of Canada are well supplied with highways and roads. Access to outlying settlements is provided to some extent by roads built by logging, pulp and paper, and mining companies, although these are not generally available for public travel. At the same time, great areas of Newfoundland, Quebec, Ontario, the Prairie Provinces, British Columbia and the Territories are very sparsely settled and are virtually without roads of any kind.

At the end of 1957, the mileage of highways and rural roads in Canada was 423,939. This mileage includes all roads under provincial jurisdiction, federal roads including those in the National Parks and the Yukon and Northwest Territories, and local roads under municipal jurisdiction other than the milages in cities and towns. The latter are given separately under the heading "Urban Roads", p. 796.

Newfoundland, Saskatchewan, British Columbia and the Territories reported decreases in 1957 as compared with 1956 for reasons mentioned in footnotes to Table 1. Federal roads, including those in the National Parks, the National Capital Commission driveways around Ottawa and in Gatineau Park, and the North West Highway System of British Columbia and the Yukon Territory, as well as other federally administered roads in the Yukon and Northwest Territories, totalled 6,049 miles.

1.—Road Milages classified by Type and by Province, 1956 and 1957

NOTE.—The figures for Canada are the sums of the milages so reported. Urban streets are not included.

¹ Includes milages of gravel roads; details not available.

² Includes 5,750 miles of gravel roads, not previously reported.

³ Includes 2,551 miles of roads on Indian reserves, not previously reported.

⁴ Excludes 940 miles of unimproved winter trails.

⁵ Excludes 46,928 miles of unimproved road allowances.

⁶ Excludes 1,534 miles of "cleared only" roads.

⁷ Excludes duplication of milages in the National Parks of British Columbia and of the Alaska Highway in British Columbia and the Yukon, previously included.

Expenditures on roads and highways reached a new high in the year ended Mar. 31, 1958, at \$701,972,824. This figure was 7 p.c. higher than the expenditure in the previous fiscal year. Construction work was up 8 p.c. and maintenance down almost 6 p.c. Table 2 shows expenditure by provinces and federal-provincial-municipal distribution of such expenditure for the fiscal years ended 1954-58.

¹ Includes payments from railways and contributions from the Railway Grade Crossing Fund toward elimination of grade crossings, etc., amounting to \$712,523 in 1953-54, \$1,237,237 in 1954-55, \$1,116,876 in 1955-56 and \$2,700,155 in 1956-57. ² Includes federal administrative costs re Trans-Canada Highway amounting to \$399,834 in 1953-54, \$431,002 in 1954-55, \$462,600 in 1955-56, \$168,000 in 1956-57 and \$235,000 in 1957-58. ³ Federal administrative costs only.

⁴ Includes expenditures of \$1,767,698 by municipalities in Manitoba for which no breakdown is available. ⁵ Includes expenditures of \$2,573,262 by municipalities in Manitoba, of \$14,932,793 by the Saskatchewan Department of Municipal Affairs, and of \$1,514,533 by the British Columbia Department of Highways for which no breakdown is available.

The Trans-Canada Highway System.—The original federal-provincial agreement of 1949 for construction of the Trans-Canada Highway was given in outline, together with other data on specifications and proposed route across the participating provinces, in the 1951 Year Book, pp. 631-634. The original Act set the standards to be met: a hard-surfaced, two-lane highway, 22 to 24 feet wide with ample shoulder widths, bridge clearances and sight distances, low gradients and curvature, a maximum load capacity of nine tons for one axle, and the elimination, wherever possible, of railway grade crossings. The shortest practicable east-west route was to be designated by each province within its own borders, in agreement on terminal points with adjoining provinces. Those sections within the National Parks were to be the responsibility of the Federal Government.

Certain amendments to financial provisions and completion date were discussed at the Federal-Provincial Conference held at Ottawa in November 1955, and the Trans-Canada Highway Act was amended by Parliament in June 1956. The new Act gives authority for increasing federal expenditure from \$150,000,000 to \$250,000,000 under a formula by which the Federal Government will pay 90 p.c. of the cost of building 10 p.c. of the mileage of the Trans-Canada Highway in each province in an effort to close gaps where no road at all exists or where certain portions are below standard. The basic 50-50 financial arrangement is still in force on the remaining 90 p.c. of the mileage in each province. A revised completion date is set at Dec. 31, 1960. New federal-provincial agreements were entered into by the participating provinces during the six months following passage of the amendments.

The Provincial Government of Quebec is not a party to a federal-provincial agreement but there is a paved highway across that province, linking the two ends of the Trans-Canada Highway route in Ontario and New Brunswick.

In the nine participating provinces the route as amended in 1956 will total 4,444 miles divided as follows: Newfoundland 554; Prince Edward Island 71; Nova Scotia 311; New Brunswick 390; Ontario 1,436; Manitoba 309; Saskatchewan 406; Alberta 282; British Columbia 568; and in the National Parks 117. Revisions in location have since altered some mileage totals. For instance, the mileage through Mount Revelstoke and Glacier National Parks in British Columbia was shortened by a decision to use the Rogers Pass route, and the decision on the location of Terra Nova, the new National Park in Newfoundland, increased the mileage for which the Federal Government is solely responsible by 63 miles. Thus the National Park mileage is altered to 143. The sum of \$12,500,000 was allocated by Parliament for construction of the Highway through the National Parks during the year ended Mar. 31, 1959.

Contractual commitments of the nine participating provinces for new construction on the Highway during the period Dec. 9, 1949, to Aug. 31, 1958, amounted to \$428,682,880 of which the Federal Government's share, including the additional 40 p.c. under the amended Act, was \$255,587,158. Federal payments to the provinces during this period for prior, interim and new construction totalled \$162,081,563. On-site labour expended on the Highway up to Mar. 31, 1958, amounted to 6,694,235 eight-hour man-days of employment; off-site employment required for the provision of necessary material and services was estimated at 11,380,200 man-days.

In Saskatchewan, work was completed over the whole route of 406 miles, and the Highway was opened and dedicated at a ceremony on Aug. 21, 1957. In provinces more handicapped by problems of terrain and construction, progress was reported. At Aug. 31, 1958, contracts for 2,963 miles of grading had been approved and the equivalent of 2,647 miles built; contracts for base-course had been approved for 2,656 miles and the equivalent of 2,276 miles completed; paving to specified standard had been completed over a distance of 1,959 miles; 357 bridges, overpasses and other structures of over 20-foot span had been approved for construction.

Urban Roads.—Information on urban roads is obtained from municipalities with populations of over 1,000. Brief statistical data are given in Table 3; more detail may be obtained from DBS annual report *Highway Statistics*.

3.—Statistics of Urban Roads, Years Ended Mar. 31, 1955-57

Section 3.—Motor Vehicles

Registration.—Motor vehicle registrations continue to increase year by year, reaching a record of 4,459,595 in 1957 compared with 4,226,474 in 1956 and 2,034,943 in 1948. Of the total in 1957, 3,383,419 were for passenger cars—one for every five Canadians. Registrations by province are given in Table 4 and types of vehicles registered by province in Table 5.

4.—Motor Vehicles Registered, by Province, 1948-57

NOTE.—Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc., but not trailers or dealer licences. Figures for 1904-35 are given in the 1937 Year Book, p. 663; for 1936-44 in the 1948-49 edition, p. 707; and for 1945-47 in the 1956 edition, p. 814.

Apparent Supply of Automobiles.—The apparent supply of automobiles in Canada in any year is computed by deducting the number exported from the sum of the production and imports. Statistics regarding retail sales and the financing of motor vehicle sales are given in Chapter XX on Domestic Trade and Prices.

6.—Apparent Supply of New Automobiles, 1948-57

¹ Factory shipments since 1952.² Includes Armed Forces vehicles.

Provincial Government Revenue from Motor Vehicles.—The taxation of motor vehicles, garages, drivers, chauffeurs, etc., is an important source of provincial government income. In every province licences or permits duly issued by the provincial authorities are required for motor vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. In 1957 the average cost per motor vehicle for operating taxes and licences was about \$108. Lower gasoline tax rates in the five provinces from Ontario westward brought the averages for those provinces below the national average. Present gasoline tax rates range from one cent per gallon in the North-west Territories to 17 cents in Newfoundland and Nova Scotia.

The more important sources from which provincial revenue from motor vehicles is derived are shown in Table 7. Federal Government revenue from import duties, excise and sales taxes are given in Chapter XXII on Public Finance.

¹ Includes other items not shown such as transfer of motor vehicles, garage and service station licences, and fines for infractions of motor vehicle laws. ² Included with trucks. ³ Included with other motor vehicles. ⁴ Included with miscellaneous revenues and therefore in total. ⁵ Included with passenger automobiles.

Sales of Gasoline.—Gasoline and diesel oil used as fuel in internal combustion engines are taxed when used by motor vehicles on highways. In some provinces they are taxed when used for other purposes. Liquified petroleum gas when used in motor buses and trucks is considered as "gasoline". The consumption of taxable gasoline, which is used almost entirely for automotive purposes, rose 6.9 p.c. to 2,626,000,000 gal. in 1957. All provinces showed increases with the exception of Prince Edward Island. Sales by province are shown in Table 8. Net sales are calculated by deducting from the gross sales (1) tax-exempt sales, (2) gasoline on which refunds have been paid, and (3) exports.

Motor Carriers—Freight.*—Statistics of the for-hire segment of the motor carrier industry have been collected since 1941. However, as little capital is required to enter the trucking business, many marginal operators are associated with the industry and the large turnover and numerous changes each year create many problems in the collection of statistics, though gradual improvement is being shown. The 2,062 firms from which usable returns were secured in 1957 reported gross revenue of \$259,056,237 compared with 2,531 firms reporting \$233,510,896 in 1956.

The motor carrier freight industry is divided into four classes based on gross annual revenue. Operators of vehicle fleets owned and operated by private companies, where the vehicles are not available for public service, such as dairies, bakeries, departmental and grocery stores, oil and gasoline distributors and breweries, are excluded; also excluded are operators of co-operatively owned vehicles and those used under almost exclusive contract such as for the collection of milk.

* Statistics are given in more detail in DBS annual report *Motor Carriers—Freight*.

¹ Incomplete coverage.

Passenger Buses.*—As previously discussed (p. 788), the collection of statistics for motor carriers includes a separate section dealing with the passenger bus industry. Data presented refer to the "for-hire" segment of the industry, divided into three classes according to gross annual revenues. Only those companies engaged in intercity and rural operations whose annual gross revenues exceed \$6,000 are covered. Motor bus or trolley coach operations of urban transit systems, and the operations of school buses owned and operated by school boards, municipalities, or under contract are not included.

* Statistics are given in more detail in DBS monthly and annual reports *Passenger Bus Statistics*.

Motor Transport Traffic.*—Motor transport traffic surveys have been conducted in all provinces on a continuing basis since 1957 by means of random samples of vehicles selected from provincial registration records. Approximately 3 p.c. of total registrations were sampled for surveys of truck operations during each quarter of 1957. Each quarterly survey ran for a seven-day period, Sunday to the following Saturday.

Excluding vehicles that do not perform normal transportation services such as cranes, tow trucks, road building equipment, etc., the average number of trucks licensed in Canada during the year 1957 was 832,055. Of these, 5.6 p.c. were for-hire carriers, 25.8 p.c. were private intercity trucks, 33.5 p.c. were private trucks operated predominantly within urban areas, and 35.1 p.c. were farm trucks. One-third of the total number were registered in Ontario and one-half were registered in the two provinces of Ontario and Quebec.

13.—Average Truck Population, by Type of Operation and Province, 1957

Type of Operation	Atlantic Provinces	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
	No.	No.	No.	No.	No.	No.	No.	No.
For-hire.....	4,362	12,081	13,803	1,258	1,618	8,499	4,723	46,344
Private—								
Intercity.....	30,214	36,895	75,843	2,395	9,755	29,661	30,239	214,992
Urban.....	18,194	65,564	113,862	20,676	10,202	10,080	40,313	278,891
Farm.....	13,928	32,535	61,677	30,790	76,948	62,931	13,019	291,828
Totals.....	66,698	147,075	265,185	55,119	98,523	111,171	88,284	832,055

Canadian registered trucks travelled 5,645,000,000 miles in Canada during the year, 15 p.c. of which was accounted for by for-hire trucks, 37 p.c. by private intercity vehicles, 31 p.c. by urban trucks and 17 p.c. by farm trucks, the most numerous of all vehicles.

For-hire trucks averaged 100,700 net ton-miles per vehicle and, although amounting to only 5.6 p.c. of total registrations, they accounted for 48 p.c. of the total net ton-miles performed by all commercial trucks in Canada, a result of the comparatively high average yearly mileage of for-hire trucks and also of the heavier average load carried (8.2 tons as compared with an average of 3.5 tons for all trucks). The predominance of heavier vehicles in the for-hire group also explains the low mileage per gallon of gasoline of 6.6 as compared with a ratio of 10.3 for all vehicles.

* Statistics are given in more detail in the national and provincial reports *Motor Transport Traffic Statistics* published by DBS.

Motor Vehicle Accidents.—Motorists are required by law to report accidents but complete statistics of these accidents are not available for all provinces. Statistics on all deaths from motor vehicle accidents are shown in Table 15. A direct comparison of such statistics between the provinces is of little value because of differences in size, population, motor vehicle density, etc., but, to put them on somewhat the same basis, the average number of deaths per 10,000 registered motor vehicles has been tabulated. These data still give no weight to differences in use of motor vehicles, variations in climate, road conditions, tourist cars, etc., all of which are factors in accidents.

Data presented in Table 16 relate to traffic accidents only and consequently may not be compared with Table 15 which includes details of fatalities occurring elsewhere than on public streets or roads.

15.—Deaths Resulting from Motor Vehicle Traffic and Non-traffic Accidents, by Province, 1948-57

NOTE.—Figures for 1926-35 will be found in the 1941 Year Book, p. 578; for 1936-44 in the 1948-49 edition, pp. 712-713; and for 1945-47 in the 1956 Year Book, pp. 819-820.

PART IV.—WATER TRANSPORT*

The Canada Shipping Act.—Legislation regarding all phases of shipping is consolidated in the Canada Shipping Act (R.S.C. 1952, c. 29). Under the Act and its amendments the Parliament of Canada accepts full responsibility for the regulation of Canadian shipping.

Section 1.—Shipping Facilities and Traffic

A special article on the importance of traffic using the Great Lakes-St. Lawrence Seaway appears in the 1956 Year Book, pp. 821-829.

Subsection 1.—Shipping

All waterways including canals and inland lakes and rivers are open on equal terms, except in the case of the coasting trade, to the shipping of all countries of the world so that the commerce of Canada is not dependent entirely upon Canadian shipping. However a large part of the inland and coastal traffic is carried in ships of Canadian registry.

Canadian Registry.—Under Part I of the Canada Shipping Act all ships in excess of 15 tons net register are required to be registered; ships of lower tonnage may be registered voluntarily, otherwise they are required to be operated under a Vessel Licence if powered by a motor of 10 h.p. or more. Sect. 6 of the Act restricts ownership to British subjects or bodies corporate established under and subject to the laws of some part of Her Majesty's Dominions and having their principal place of business in those Dominions.

* Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, harbours, administrative services, and marine services by the Department of Transport and the National Harbours Board; the St. Lawrence Seaway by the St. Lawrence Seaway Authority; part of the financial statistics by the Department of Public Works; shipping subsidies by the Director of Subsidized Steamship Services, Canadian Maritime Commission; Panama Canal by the Governor of the Panama Canal Zone; other canal traffic and statistics of shipping by the Public Finance and Transportation Division, Dominion Bureau of Statistics.

Under the British Commonwealth Merchant Shipping Agreement all Commonwealth ships are given the general designation 'British Ship'; and a ship that should be but is not registered is not entitled to the privileges accorded to British ships. Ships in the planning stage or in course of construction may be recorded before registry by a Registrar of Shipping.

1.—Vessels on the Canadian Shipping Registry, by Province, as at Dec. 31, 1955-57

NOTE.—Figures for 1935-54 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

Shipping Traffic.—Complete statistics of shipping traffic, showing all the freight carried by water are not available. However, there is a record of the number and tonnage of ships calling at all ports at which there are customs collectors and of cargoes of vessels trading between Canadian and foreign ports. Commencing with 1957 these shipping statistics have been enlarged to include movement in and out of non-customs ports. Coast-wise cargo has been reported from Jan. 1, 1952. Reports are not made for vessels of less than 15 registered net tons.

2.—Vessels Entered at Canadian Ports,¹ 1948-57

NOTE.—Figures for the years ended Mar. 31, 1929-35 are given in the 1941 Year Book, p. 597; for 1936-44 in the 1948-49 edition, p. 733; and for 1945-47 in the 1956 Year Book, p. 830.

WATER-BORNE CARGO LOADED AND UNLOADED AT EACH OF THE PRINCIPAL PORTS, 1952 AND 1957

(IN MILLIONS OF TONS)

Subsection 2.—Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for such bulk freight as lumber, coal, oil and grain. Facilities may include cold storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil storage tanks and, in the chief harbours, dry dock accommodation.

Eight of the principal harbours of Canada are administered by the National Harbours Board. Seven other harbours come under the supervision of the Department of Transport and are administered by commissions that include municipal as well as Federal Government appointees. In addition, there are about 300 public harbours that are under the direct supervision of the Department of Transport. These harbours are administered under rules and regulations approved by the Governor General in Council. Harbour masters have been appointed by the Minister of Transport for 131 of these harbours, their remuneration being paid from fees levied on vessels under the terms of the Canada Shipping Act.

At most ports, in addition to the harbour facilities operated by the National Harbours Board or other operating commission, there are dock and handling facilities owned by private companies such as railway, pulp and paper, oil and sugar industries. At a number of ports there are also dry docks; these are dealt with separately at pp. 814-815.

5.—Facilities of the Six Principal Harbours as at Dec. 31, 1957

NOTE.—The facilities at these ports include those under the control of other agencies as well as those of the National Harbours Board.

¹ Includes a 3,000,000-bu. grain-storage shed connected with the elevator.
² Two 5-ton locomotive cranes and two electric Luffing cranes capable of lifting 180 (sugar) tons per hour are also available.

National Harbours Board.—The National Harbours Board, a Crown corporation established in 1936, is charged with the administration and operation of the following properties: port facilities such as wharves and piers, transit sheds, grain elevators, cold storage warehouses, terminal railways, etc., at the harbours of Halifax, Saint John, Chicoutimi, Quebec, Trois Rivières, Montreal, Vancouver, and Churchill; grain elevators at Prescott and Port Colborne; and the Jacques Cartier Bridge at Montreal. These facilities represent a capital investment of approximately \$280,000,000. Current operating revenues and expenditures are given in Table 30, pp. 830-831.

Harbour Traffic.—The freight movement through a large port takes a number of different forms. The overseas movement of freight loaded on and unloaded from sea-going vessels frequently constitutes a surprisingly small part of the total. Usually the volume from coasting vessels is larger. There is, as well, the in-transit movement in

vessels that pass through the harbour without loading or unloading and the movement from one point to another within the harbour, which in many ports amounts to a large volume. It is not possible to obtain statistics of the total freight handled at all the ports and harbours of Canada because many of them are small and without the staff necessary to maintain detailed records. However, the National Harbours Board prepares an annual report of the water-borne cargo loaded and unloaded at the eight ports under its control. Six of these are the principal ports of Canada and the cargo handled at each is shown in Table 6. The figures include freight carried by coasting and inland international as well as by sea-going shipping; they include all cargo loaded and unloaded, whether by facilities under the jurisdiction of the Board or at private docks and terminals. Cross-harbour movements, ballast (non-revenue), bunkers, ships' stores, mail and passengers' baggage are not included.

6.—Principal Commodities in Water-Borne Cargo Loaded and Unloaded at Each of the Six Principal Ports, 1956 and 1957

NOTE.—Commodities totalling less than 50,000 tons in 1957 are not listed.

Dry Docks.—The Department of Public Works of the Federal Government owns five dry docks—one at Kingston, Ont., two at Lauzon, Que., and two at Esquimalt, B.C.—and operates all except the one at Kingston which is under lease to the Canadian Shipbuilding and Engineering Company of Kingston. The old Esquimalt dry dock is temporarily under the administration of the Department of National Defence. Each of the large dry docks at Lauzon and Esquimalt can be divided for use of small vessels; the larger Lauzon dock cost approximately \$4,500,000 and the larger Esquimalt dock approximately \$7,000,000.

7.—Dimensions of Dry Docks Owned by the Federal Government

Location	Length	Width at—			Depth of Water on Sill	Rise of Tide

North Vancouver, B.C. (floating dock).....	556.5	98.0	28 ⁴	2,500,000	4½ p.c. for 35 years

¹ Subsidy payments have been completed. ² Now converted to slip. ³ Position of caisson may be altered to provide a maximum working length of 720 ft. ⁴ Over sill (H.W.).

Subsection 3.—Canals

The canals and canalized waters of Canada under the jurisdiction of the Department of Transport comprise a series of waterways providing navigation for 1,875 miles inland from salt water. The canals included under the two classifications—main or primary canals and subsidiary or secondary canals—are listed in Table 9 with their locations, lengths and lock complement. In addition to these, the federal Department of Public Works administers the St. Andrews Lock (length, width and draught, respectively, 215, 45 and 17 feet) on the Red River at Selkirk, Man., and the lock at Poupore, Que. A few small locks are operated by provincial authorities.

During 1957, 37,230,349 tons of freight and 29,436 vessels passed through the canals as compared with 40,016,565 tons of freight and 32,865 vessels during 1956. In addition to freight and passenger vessels, thousands of pleasure craft are locked through the canals. Vessels locking at Sault Ste. Marie during 1957 carried 96,360 passengers as compared with 121,151 in 1956.

Revenue from canals during the year ended Mar. 31, 1958, amounted to \$1,984,717, of which \$1,444,296 was derived from rentals for hydraulic and land privileges and wharfage. In the previous fiscal year the total revenue was \$1,790,202 with rentals and wharfage amounting to \$1,349,989.

**9.—Lengths of Channels and Dimensions of Locks under the Control of the
Department of Transport, as at July 1, 1958**

¹ Figures for the United States include small amounts of traffic from other foreign countries.

The figures in Tables 12 and 13 include duplications where the same freight passes through two or more canals, but in Table 14 duplications in the traffic passing through the St. Lawrence and Welland Ship Canals and the Canadian lock at Sault Ste. Marie have been eliminated wherever possible.

Grain trans-shipped at Georgian Bay, Lake Erie, or other ports above Montreal is treated as new cargo and as most of this grain has passed through either the Canadian or United States locks at Sault Ste. Marie there are still duplications in the data because of this treatment. These duplications cannot be avoided when net totals for the Canadian canals are computed because it is impossible to ascertain which lock at Sault Ste. Marie was used by the grain reloaded at Port Colborne, Ont., or other trans-shipping port.

Totals.....	19,699,507	119,221,949	138,921,456

Traffic through the Sault Ste. Marie canals, Canadian and American, has been approximately twice as heavy as the traffic through the Panama Canal during the latest ten years for which records are available. Canal traffic has varied from 20,484,000 tons

in 1932, which was less than the Panama traffic, to 111,792,230 tons in 1957. The dominant traffic from a tonnage aspect is iron ore which fluctuated from a low of 3,607,000 tons in 1932 to a high of 98,657,591 tons in 1953. In 1955 this tonnage amounted to 89,396,865, but dropped to 86,509,714 in 1957.

Soft coal has usually been second in volume to iron ore, increasing from 8,676,297 tons during the 1949 season to 13,301,048 tons in 1950; volume in succeeding years amounted to 7,397,623 tons in 1954, 9,053,769 tons in 1955, 10,238,048 tons in 1956 and 8,970,640 tons in 1957.

Although wheat ranks third in tonnage, its value over the past quarter-century has been greater generally than that of either iron ore or coal. Other grains have been about one-quarter to one-fifth of the wheat tonnage and a smaller ratio of the value.

The Panama Canal.—The Panama Canal was opened to commercial traffic on Aug. 15, 1914, and has since been a waterway of great importance to the ports of British Columbia, from which vessels leave direct for United Kingdom and other European ports throughout the year. As an alternative route to that of the transcontinental railway lines, this water passage is of vital importance in the solution of the bulk transportation problems of the Continent. During World War I the great expectations based upon the opening of the Canal were not realized because of the scarcity of shipping. However, with the postwar decline in ocean freight rates, an increase in traffic between Canada's Pacific ports and Europe took place and, while the proportion carried in vessels of Canadian registry was comparatively small, the cargo tonnage nevertheless assumed considerable proportions. During World War II the volume of Canadian traffic through the Canal was again reduced but has since increased considerably. A distinctive feature of this traffic is that most of the tonnage westbound is destined for Canadian West Coast ports, while only a small percentage of the freight originating on the West Coast is unloaded in Eastern Canada.

15.—Traffic to and from the East and West Coasts of Canada via the Panama Canal, Years Ended June 30, 1949-53

Subsection 4.—Marine Services of the Federal Government

The services covered in this Subsection deal with aids to navigation, including the maintenance of the St. Lawrence River Ship Channel, steamship inspection, pilotage service, sea-faring personnel and the operations of the Canadian National (West Indies) Steamships Limited.

Aids to Navigation.—Included under aids to navigation are the lighthouses and the whole system of marine danger signals on the East and West Coasts of Canada, on Hudson Bay and Strait, the St. Lawrence River and Gulf, the Mackenzie River and Arctic passages, the inland rivers and lakes, and at the entrances to harbours—a very extensive system designed to provide safe navigation in all Canadian waters. In addition, a pilotage service is maintained in waters where navigation is difficult; this service is described at p. 822. A further aid to safe navigation is found in the chains of radio signal and direction-finding stations described under Radio Services in Chapter XIX, pp. 859-860. Lists of aids to navigation, with the exception of very minor ones, are published by the Department of Transport.

17.—Marine Danger Signals Maintained in Canada, Years Ended Mar. 31, 1957 and 1958

NOTE.—In addition to the aids to navigation listed, approximately 9,300 unlighted buoys, balises, dolphins and beacons are maintained. Lists of marine danger signals maintained from 1929 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

Type of Signal	1957	1958	Type of Signal	1957	1958
	No.	No.		No.	No.
Lights.....	3,082	3,162	Hand fog horns.....	122	125

Fog bells.....	47	49	Fog alarm stations only.....	17	17

Navigable waters have been improved greatly by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and for the control of roads and bridges that cross navigable channels. Ice-breaking operations are carried on at the beginning and at the end of winter to prolong the season of navigation in important waters that freeze over—particularly in connection with sea-going shipping from Montreal—and to prevent flood conditions during the spring ice break-up.

St. Lawrence River Ship Channel.—This channel extends from about 40 miles below Quebec City to the foot of Lachine Canal at Montreal, a distance of 200 miles. About 113 miles of this distance is dredged channel.

Above Quebec the channel has a limiting depth of 35 feet at extreme low water and a minimum width of 550 feet, with additional width up to 1,500 feet at all curves and difficult points, and additional anchorage and turning areas. This section comprises about 100 miles of dredged channel. Below Quebec the limiting depth of dredged channel, about 13 miles in length, is 30 feet at low tide, with a width of 1,000 feet. An average tidal range of 15 feet in this area provides ample depth for any vessel using the St. Lawrence route. Above Quebec maintenance requirements as a result of silting in this dredged channel are relatively minor but below the city silting is more pronounced because of tidal action.

The ship channel is well defined by buoys and the centre marked by range lights, permitting uninterrupted day and night navigation throughout the open season from about mid-April to early December. The movements of all shipping, weather and ice conditions and obstructions to traffic throughout the St. Lawrence waterway from Fame Point, Que., to Kingston, Ont., are recorded and made available to all concerned through a series of reporting stations known as the Marine Reporting Service.

A fleet of ice-breaking vessels is maintained to facilitate the movement of shipping between Montreal and the sea during the opening and closing of navigation, and to alleviate flood conditions in low-lying areas.

18.—Seasons of Open Navigation on the St. Lawrence Ship Channel, 1939-58

NOTE.—Figures from 1882 are given in the corresponding table of previous Year Books beginning with the 1934-35 edition.

¹ "Channel Open" means the route can be navigated although there may be floating ice in the river.

Steamship Inspection.—The Steamship Inspection Service, provided for under Part VII of the Canada Shipping Act, is responsible for the administration and carrying out of the provisions of the Act respecting the periodic inspection of power-driven ships and the issue of inspection certificates; the assignment of load lines; the conditions under which dangerous goods may be carried in ships; the protection against accident of workers employed in loading and unloading ships; the prevention from pollution of Canadian territorial and inland waters by oil from ships; and also for the administration and carrying out of the provisions relating to the certification and employment of marine engineers. The Service has a headquarters staff at Ottawa and staffs of inspectors at the principal ocean and inland ports.

The Board of Steamship Inspection decides on questions arising out of the administration of the Act and takes care of the interests of the Federal Government in schools for marine engineers.

Pilotage.—Pilotage service functions under the provisions of Part VI of the Canada Shipping Act. Wherever a pilotage district has been created by the Governor in Council, qualified pilots are licensed by the pilotage authority of the district. There are in Canada 42 pilotage districts in nine of which the Minister of Transport is the pilotage authority (see Table 20); in each of the other districts the authority is a local body appointed by the Governor in Council.

20.—Pilotage Service, by Pilotage District, Years Ended Mar. 31, 1956 and 1957

In addition there are 21 districts in Newfoundland under the local pilotage authority. These districts continued to be administered under Newfoundland statutes after union with Canada (Mar. 31, 1949). Part VI of the Canada Shipping Act with respect to pilotage has not been proclaimed in force in Newfoundland.

Seamen Engaged and Discharged.—Seamen engaged and discharged at Canadian ports under the provisions of the Canada Shipping Act during the years ended Mar. 31, 1948-57 are shown in Table 21.

21.—Seamen Engaged and Discharged at Canadian Ports, Years Ended Mar. 31, 1948-57

NOTE.—Figures from 1918 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

¹ Newfoundland included from Apr. 1, 1949.

Canadian National (West Indies) Steamships Limited.—In conformity with the Canada-West Indies Trade Agreement of 1926 (16-17 Geo. V, c. 16) the Federal Government has provided direct steamship services to the West Indies through the medium of Canadian National (West Indies) Steamships Limited.

The eight vessels owned by the Company ceased active operations on July 4, 1957, as a result of a strike called by the Seafarers International Union. Prolonged negotiations failed to end the strike and it was decided to sell the fleet and wind up the affairs of the Company. The vessels were sold in August 1958 to the Banco Cubano del Comercio Exterior of Havana, Cuba.

22.—Financial Statistics of Canadian National (West Indies) Steamships Limited, 1948-57

NOTE.—Figures for the years 1929-38 are given in the 1942 Year Book, p. 620; for 1939-44 in the 1950 edition, p. 777; and for 1945-47 in the 1956 Year Book, p. 844.

Subsection 5.—The St. Lawrence Seaway

The St. Lawrence Seaway became a reality with the commencement of the navigation season in April of 1959. Her Majesty Queen Elizabeth II, together with President Dwight D. Eisenhower of the United States of America, officiated at the formal inaugural ceremonies opening the new waterway on June 26, 1959.

The St. Lawrence Seaway, in its broadest sense, provides a deep waterway extending some 2,200 miles from the Atlantic Ocean to the Head of the Great Lakes. The waters of Lake Superior, seeking sea level, drop 602 feet through the lesser Great Lakes and the St. Lawrence River on their way from the heart of the Continent to the Atlantic Ocean. The greater part of this drop takes place in the Niagara River—now overcome by the 27-mile-long Welland Ship Canal with its eight locks—and in the St. Lawrence River.

Before construction of the Seaway conditions for navigation were as follows: (1) from the Gulf of St. Lawrence to Montreal, a distance of 1,000 miles, controlling navigation channels were 35 feet in depth; (2) from Montreal to Lake Ontario, a distance of 180 miles,

controlling navigation channels were 14 feet in depth; (3) from Lake Ontario to Lake Erie, a distance of 27 miles, controlling navigation channels were about 25 feet deep; and (4) from Lake Erie to the Head of the Lakes, a distance of 970 miles, controlling navigation channels were approximately 25 feet downbound and about 21 feet upbound. Thus, between the highly developed Great Lakes section, with a minimum channel of some 21 feet, and the ocean port facilities at Montreal, lay 114 miles of rapid-studded St. Lawrence River, navigable only through a chain of outmoded 14-foot canals capable of handling ships with a maximum capacity of 3,000 tons. The Seaway project was designed to break this bottleneck and extend 27-foot facilities from the Great Lakes to the sea. Seven new locks were required for the purpose—five built by the St. Lawrence Seaway Authority of Canada and two by the Saint Lawrence Seaway Development Corporation of the United States. These replace 21 inadequate locks between Montreal and Lake Ontario.

Also, because Canadian Government regulations require that all bridges spanning waters navigable by ocean-going ships have a minimum overhead clearance of 120 feet, extensive modifications are being made to seven bridges between Montreal and Lake St. Francis. In addition, a new high-level suspension bridge has been constructed across the south channel of the St. Lawrence River at Cornwall Island—the substructure by Canada's St. Lawrence Seaway Authority and the superstructure by the United States Seaway entity.

Associated with the St. Lawrence Seaway navigation project is the construction of a large hydro-electric power development in the International Rapids Section of the St. Lawrence River between Cornwall and Prescott. In July 1958, a 38,000-acre power pool was formed by means of control dams and by 1960 an international powerhouse will be generating about 2,200,000 h.p. of electric energy to be shared equally by Canada and the United States. Eleven of the designated 18 units began operation in the latter part of 1958.

After four years of sustained activity, work on the new waterway has been concluded, although some surface construction is not quite completed. On land and water, from the harbour of Montreal to the upper end of the Welland Ship Canal, a distance of 400 miles, as many as 6,000 men have been employed at one time on the Canadian navigation facilities.

In general, clearing and excavation was done in 1954 and 1955. In 1956, excavating and dredging continued and concrete work was started. But the high point in construction took place during 1957, a year signalized by the rise of structures. Installation of equipment and erection of bridges started in 1957 and continued throughout most of 1958. The first major completed structure was the Iroquois Lock in the International Rapids Section of the Seaway. This lock, the most westerly of the seven new Seaway locks has been in operation since May 22, 1958. The Canadian package freighter *Calgarian* was the first commercial vessel to use a Seaway lock. The two American locks near Massena, N.Y., were officially opened to traffic on July 4 of the same year. The other four Canadian locks, located in the Montreal area, neared completion late in 1958. The first lock from seaward is at St. Lambert and the next upstream at Côte Ste. Catherine, both located on the south shore of the St. Lawrence River about eight miles apart. These locks were completed in concrete early in 1958 and the installation of gates, electrical and control equipment, pumps, fenders and other required apparatus, quickly followed. Both locks underwent their initial tests during the autumn of 1958. Next upstream from the Côte Ste. Catherine lock are the Lower and Upper Beauharnois Locks.

Channel dredging has taken place in Montreal Harbour, in Lakes St. Louis and St. Francis, in the channels at Cornwall Island, in the Thousand Islands Section and in the Welland Ship Canal. As much as 56,000,000 cu. yards of rock and earth have been excavated and nearly 18,000,000 cu. yards have been dredged for the construction of the new locks, canals and channels. Canals will have a minimum width of 200 feet and a depth of 27 feet.

The costs of the Seaway and power projects are estimated to be in the vicinity of \$1,054,000,000 divided as follows: the St. Lawrence Seaway Authority of Canada,

\$322,000,000; the Saint Lawrence Seaway Development Corporation of the United States, \$132,000,000; the Hydro-Electric Power Commission of Ontario, \$300,000,000; and the Power Authority of the State of New York, \$300,000,000.

The Seaway is a self-liquidating project and costs of construction and operation of the navigation facilities are to be recovered from the imposition of tolls on shipping. In June 1958, a joint report was presented by Canadian and American Tolls Committees on proposed tolls to be assessed shipping using Seaway facilities. Hearings by the Seaway entities on the recommended tariff of tolls took place in August, for the purpose of giving users an opportunity to express their views on the recommendations.

The Canadian and United States entities earlier came to the conclusion that ships having an over-all length of not more than 730 feet and a beam of up to 75 feet can be accommodated in the Seaway, subject to the proviso that vessels exceeding 715 feet in length or 72 feet in beam should be classified in the category of vessels having characteristics which will subject them to appropriate scheduling and handling so as not to interfere with other traffic.

During 1958, the St. Lawrence Seaway Authority continued the supervision and inspection of contracts that were in operation and the testing of locks and river models and continued investigation into the performance of ships in restricted channels.

Section 2.—Financial Statistics of Waterways

The principal statistics available on the cost of facilities for water-borne traffic consist of the record of public expenditure on waterways. Such expenditure may be classified as capital expenditure, or investment and expenditure for maintenance and operation. Revenue from operation is also recorded. The major part of the capital expenditure for the permanent improvement of waterways is provided by the Federal Government. Capital expenditure by municipalities and private capital expenditure is confined almost entirely to terminal or dockage facilities. On the other hand, investment in shipping has come almost entirely from private sources. No figures are available regarding private investment in shipping except those appearing in the reports of the operating companies that cover only a portion of the field. There are no statistics showing the revenue of ship operators from passenger and freight traffic.

Capital Expenditure.—The only figures available of federal capital expenditure on Canadian waterways are those compiled from the *Public Accounts* and the annual reports of the Departments of Transport, Public Works and Finance. It must be realized that such expenditure cannot be regarded as any indication of the present worth of the undertakings represented. The cost of building canals and other waterways and permanent works to facilitate water transportation in Canada is represented in such reports at their original book values, no deductions having been made from the cumulative totals for depreciation from year to year or for abandonment of works that have been superseded such as, for instance, the first Welland Canals. To this extent such figures are an overstatement of the present value of the works in use. The figures are further limited by the fact that they do not include the cost of maintenance and improvements or the operation of these works, such charges having been made to the consolidated deficit account as annual expenditure and not to capital account. Table 23 shows that capital expenditure on canals, marine services and miscellaneous water-transport facilities reached the grand total of \$443,841,168 by the end of March 1957, but this must be interpreted with the above qualifications in mind. In Table 24 the capital values of the fixed assets administered by the National Harbours Board are shown as at Dec. 31, 1956 and 1957, and are additional to the capital expenditure of Table 23. Figures in Table 24 reflect the capital situation in regard to the national harbours of Canada far better than do those of Table 23 for waterways and facilities, inasmuch as they include all buildings, machinery and durable plant improvements; they also have been subject to deductions for depreciation and the scrapping or abandonment of plant and therefore more nearly approach the present value of the properties under the administration of the National Harbours Board.

23.—Capital Expenditure of the Federal Government on Canals, Marine Services and Miscellaneous Water-Transport Facilities, as at Mar. 31, 1956 and 1957

NOTE.—Compiled from annual reports of the Department of Transport and the *Public Accounts*.

Waterways Expenditure and Revenue on Consolidated Fund Account.—

Expenditure under this heading (Tables 26 to 28) is mainly for the operation and maintenance of various facilities for water transport but, unfortunately, the line between operation and maintenance expenditure is not as finely drawn as is desirable. Revenue in connection with waterways of the Department of Transport and the Department of Public Works is shown in Table 29.

To facilitate water transportation, the Federal Government expends annually, in addition to the recurrent expenditure shown here, a considerable amount to cover deficits of the Canadian National (West Indies) Steamships Limited and of the National Harbours Board, and for mail subsidies and steamship subventions as shown in Table 31. Operating expenditure and revenue of facilities administered by the National Harbours Board are shown separately in Table 30.

PART V.—CIVIL AIR TRANSPORT*

Section 1.—Administration and Development

Historical Developments.—Canada's aviation history dates back to 1909 when the *Silver Dart*, piloted by Jack McCurdy (Hon. J. A. D. McCurdy, former Lieutenant-Governor of Nova Scotia), flew at Baddeck, N.S. This was the first aeroplane flight by a British subject in the British Empire. A replica of this aircraft took to the air on Feb. 23, 1959, to mark the golden anniversary of powered flight in Canada.

There was little aviation development in Canada until World War I. Following the War, many of Canada's wartime aviators assisted in developing air transportation services into inaccessible areas, air forestry patrols and intercity air services. During this period the flying clubs movement received government assistance in the training of pilots and engineers required by Canada's civil aviation industry.

World War II was a period of intensive construction of airports and aerodromes to meet the requirements for the training of airmen under the British Commonwealth Air Training Plan. At the end of the War, many Service-trained Canadian airmen turned to commercial flying and were absorbed by existing operating companies or helped to develop other flying services. Transatlantic air services were inaugurated by the Department of Transport during the War and were turned over to Trans-Canada Air Lines which was created by Act of Parliament in 1937 to provide for the development of a government-controlled transcontinental air service for regular scheduled operations. Canadian Pacific Air Lines was created by the amalgamation of small commercial operators for the servicing of Canada's northland. In 1949 the Canadian Pacific Air Lines was designated to provide transpacific services on behalf of Canada and in the spring of 1959 began the operation of one daily transcontinental flight each way between Montreal and Vancouver. Operations of TCA and CPA are covered on pp. 833-834.

The Control of Civil Aviation.—The control of civil aviation in Canada is under the jurisdiction of the Federal Government and is administered under the authority of the Aeronautics Act 1919, and amendments thereto. The Aeronautics Act is in three parts. Broadly speaking, Part I deals with the technical side of civil aviation comprising matters of registration of aircraft, licensing of airmen, the establishment and maintenance of airports and facilities for air navigation, air traffic control, accident investigation and the safe operation of aircraft. This Part of the Act is administered by the Director of Civil Aviation under the supervision of the Director General of Air Services, Department of Transport. Part II of the Act deals with the social and economic aspects of commercial air services and assigns to the Air Transport Board certain regulatory functions of commercial air services (*see* p. 773). Part III deals with matters of government internal administration in connection with the Act.

Weather Services.—Weather services are provided by the Meteorological Branch of the Department of Transport to meet the increasing demands of aviation, agriculture, industry and the general public. The expanding weather services required by the Department of National Defence both in Canada and with Canadian Armed Forces abroad are a major responsibility of the Branch. A Central Analysis Office is operated in Montreal together with 52 forecast offices across Canada, two on shipboard and four in Europe. Forecast offices are linked by 39,100 miles of teletype and radio teletype circuits and by a national facsimile system covering a total of 13,900 air-line miles. As of Nov. 1, 1958, the Branch maintained 272 synoptic stations taking six-hourly observations, a network of 31 radiosonde stations (including five in the extreme Arctic operated jointly with the United States) taking upper air soundings, 70 stations recording upper winds and 1,766 climatological stations. One ocean weather station taking weather observations every three hours in the Pacific, 1,000 miles west of Vancouver, is maintained under international agreement.

* Sections 1 and 2 of this Part were revised in the Department of Transport and Section 3, except where otherwise indicated, in the Transportation and Public Utilities Section, Public Finance and Transportation Division, Dominion Bureau of Statistics. For military air transportation, *see* Chapter XXVI on Defence of Canada.

Air Industries and Transport Association.—Commercial flying schools that are members of the Air Industries and Transport Association numbered 55 at the end of 1957. During 1957 the number of students instructed and graduated as private pilots was 922, the number graduated as commercial pilots was 186 and 65,397 instructional hours were flown.

Royal Canadian Flying Clubs.—At the end of 1957 there were 42 flying clubs connected with the Royal Canadian Flying Clubs Association. The total membership was 9,531 and the aircraft available for instructional purposes numbered 199. During the year 1,556 students were instructed and graduated as private pilots and 186 students were graduated as commercial pilots. Instructional hours of flying totalled 112,322.

International Air Agreements.—The position of Canada in the field of aviation as well as its geographical location makes imperative co-operation with other nations of the world engaged in international civil aviation. Canada took a major part in the original discussions that led to the establishment of the International Civil Aviation Organization (ICAO) which has headquarters at Montreal, Que. A special article on The International Civil Aviation Organization and Canada's Participation Therein appears in the 1952-53 Year Book, pp. 820-827.

In recent years Canada has been a signatory to agreements concerning civil aviation with Australia, New Zealand, Belgium, Denmark, France, Ireland, Japan, Mexico, the Netherlands, Norway, Peru, Portugal, Sweden, Switzerland, the United Kingdom and the United States.

Section 2.—Air Services

Air transport services are grouped into two broad classes—Scheduled Services and Non-scheduled Services. The first group provides regular point-to-point service on scheduled advertised routes and the second group includes:—

- (1) Specific Point Services from a designated base to specific points on the basis of unit rates that may be undertaken as the traffic warrants and that are not on a time schedule;
- (2) Chartered Services operated on the basis of the private chartering of an entire aircraft for a specific trip;
- (3) Contract Air Services which operate on one or more specific contracts—these do not operate on a time schedule nor need the contractor take the entire space of the aircraft; and
- (4) Specialty Air Services concerned with large-scale forestry and utility surveys according to some specific agreement.

Trans-Canada Air Lines.—During 1957, TCA flew 1,385,777,000 passenger-miles, carrying 2,392,713 passengers. Ton-miles of air freight totalled 12,903,000, air express 2,575,000 and mail 9,855,000.

During the year the company introduced a non-stop air service between Toronto and Vancouver, reducing the travel time to seven hours. A non-stop Atlantic service was also inaugurated between Toronto and the United Kingdom, and a daily transcontinental flight was routed through Windsor, Ont. Operations with the propeller-turbine Viscounts were extended to London, Ont., Quebec City, Saguenay, Sept Îles, Moncton, Fredericton, Saint John, Yarmouth, Halifax and Boston.

During 1958 a third Super Constellation transcontinental flight was inaugurated including non-stop service between Edmonton and Toronto and other direct services were begun between Calgary and Saskatoon, Toronto and Moncton, and Montreal and Halifax. Viscount service was extended to 12 more Canadian communities. The international route pattern was broadened to include Belgium, Switzerland and the Island of Antigua in the West Indies. Non-stop flights were begun between Montreal and Paris as well as a shortened transatlantic operation between Vancouver and London. Fifteen weekly flights in each direction were scheduled across the Atlantic during the peak summer traffic.

TCA routes, domestic and international, totalled 31,544 unduplicated miles and service was being provided within Canada and to the United States, the British Isles, France, Belgium, Germany, Switzerland, Bermuda and the islands of the Caribbean.

At the end of 1958 TCA's fleet in service consisted of 46 Viscounts, 12 Super Constellations, 21 North Stars and 9 DC-3's. Its working force numbered 10,043 persons. A further increase in service and equipment will take place in 1959—20 Vanguards on order, combined with the long-range DC-8's and short-range Viscounts, will give TCA an all four-engined, turbine-powered fleet, probably the first in the air transportation industry.

Canadian Pacific Air Lines Limited.—In 1957, CPA operated scheduled domestic services over 9,354 route-miles and flew 279,916 revenue passengers a total of 305,710,136 revenue passenger-miles. Revenue cargo amounted to 5,464,903 ton-miles and mail to 3,222,186 lb. CPA overseas routes operate from Vancouver to Australia, New Zealand, Honolulu and Fiji on the South Pacific service; to Japan and Hong Kong via the Great Circle route through the Aleutian Islands of the North Pacific; from Vancouver to Amsterdam across the Arctic; and across the Atlantic to Portugal and Spain. A South American network serves Mexico City, Lima, Santiago and Buenos Aires. In Canada, CPA flies

north-south routes, mostly in the West. In 1958 permission was given by the Air Transport Board to CPA to operate one transcontinental flight a day in each direction between Vancouver, Winnipeg, Toronto and Montreal. At the end of 1958 the fleet consisted of 41 aircraft.

Independent Air Lines.—In addition to the two major Canadian air carriers, Trans-Canada Air Lines and Canadian Pacific Air Lines Limited, there are five other domestic air carriers licensed to operate scheduled commercial air services in Canada, namely, Austin Airways Limited, Toronto, Ont.; Maritime Central Airways Limited, Charlottetown, P.E.I.; Pacific Western Airlines Limited, Vancouver, B.C.; Quebecair Inc., Rimouski, Que.; and Trans-Air Limited, Winnipeg, Man.

Licensed domestic air carriers operating in Canada as at Mar. 31, 1958, held valid operating certificates covering 42 scheduled, 111 flying training, and 650 other non-scheduled and specialty services. These non-scheduled services, in addition to providing effective access to sections of Canada that are inaccessible by other means of transportation, act as feeder lines to the scheduled airlines. They also include such specialty services as recreational flying, aerial photography and surveying, aerial pest control, aerial advertising and aerial patrol.

Commonwealth and Foreign Scheduled Commercial Air Services.—At the end of December 1958 there were 16 Commonwealth and foreign air carriers holding valid Canadian operating certificates and licences covering international scheduled commercial air services operating into Canada, as follows:—

Air France (Compagnie Nationale Air France) operates between points in Metropolitan France and Montreal, Que., Canada, direct or via Shannon, Ireland; Keflavik, Iceland; or the Azores and Gander, Nfld., Canada; and New York, N.Y., and Chicago, Ill., U.S.A.

American Airlines, Inc., operates between Toronto, Ont., Canada, and New York, N.Y., Newark, N.J., U.S.A.; direct or via Buffalo, N.Y., U.S.A.

British Overseas Airways Corp., operates between London, England, Gander, Nfld., and Montreal, Que., Canada; and Detroit, Mich., U.S.A.; and between London, England, Gander, Nfld., and Montreal, Que., Canada.

Eastern Air Lines, Inc., operates between the terminals Ottawa, Ont., Canada, and Montreal, Que., Canada, and New York, N.Y., U.S.A., direct or via Burlington, Vt., U.S.A.; and between the terminals Ottawa, Ont., and Montreal, Que., Canada, and Washington, D.C., U.S.A., direct or via Massena/Syracuse, N.Y., U.S.A.

KLM Royal Dutch Airlines operates between the terminals Amsterdam, the Netherlands, and Montreal, Que., Canada; and between the terminals Montreal, Que., Canada, and Willemstad, Curaçao, Netherlands Antilles.

Lufthansa German Airlines operates between points abroad and Montreal, Que., Canada, and Chicago, Ill., U.S.A.

Northeast Airlines, Inc., operates between Montreal, Que., Canada, and Boston, Mass., U.S.A., via Burlington, Vt., Montpelier-Barre, Vt., White River Junction, Vt. (Lebanon Airport, N.H.), and Concord, N.H., U.S.A.

Northwest Airlines, Inc., operates between Winnipeg, Man., Canada, and Fargo, N.D., U.S.A., and between Minneapolis/St. Paul, Minn., U.S.A., Edmonton, Alta., Canada, Anchorage, Alaska, and beyond.

Pan American World Airways Inc., operates between Seattle, Wash., U.S.A. and Fairbanks, Alaska, with points of call at Juneau and Annette Island, Alaska, and Whitehorse, Y.T., Canada, and between the points in the United States, Gander, Nfld., Canada, and Europe.

Qantas Empire Airways Ltd., operates between Sydney, Australia, San Francisco, Cal., U.S.A., and Vancouver, B.C., Canada.

Sabena Belgian World Airlines operates between Brussels, Belgium, and New York, N.Y., U.S.A., via Shannon, Ireland, and Gander, Nfld., Canada.

Scandinavian Airlines System operates between Stockholm, Sweden, Oslo, Norway, Copenhagen, Denmark, Prestwick, Scotland, Montreal, Que., Canada, and New York, N.Y., U.S.A.

Seaboard and Western Airlines, Inc., operates between points in the United States, Gander, Nfld., Canada, and beyond.

TWA (Trans-World Airlines, Inc.), operates between points in the United States, Gander, Nfld., Canada, and points abroad.

United Air Lines, Inc., operates between Vancouver, B.C., Canada, and Seattle, Wash., U.S.A., via Bellingham, Wash., U.S.A.

Western Air Lines, Inc., operates between Great Falls, Mont., U.S.A., Cut Bank, Mont., U.S.A., and Lethbridge, Alta., and Edmonton, Alta., Canada, via Calgary and Penhold, Alta., Canada.

Section 3.—Civil Aviation Statistics

Ground Facilities.*—Aircraft landing areas in Canada are classified in Table 3 by administrative agency, as licensed or unlicensed land facilities or seaplane bases, and military air fields. The unlicensed aerodromes and seaplane bases shown are kept in varying degrees of readiness but lack one or more of the facilities usually found in licensed airports, such as lights, customs offices, passenger accommodation, ground/air communication, etc. Associated with these ground facilities is a network of radio aids to navigation designed to facilitate en route navigation and safe landings under low visibility conditions.

The Department of Transport operates 102 low frequency radio ranges, 9 VHF omni-directional ranges, 54 non-directional radio beacons and 26 instrument landing systems. These facilities are calibrated and flight-checked by Civil Aviation Inspectors on a regular schedule. Eighteen additional VHF omni-directional ranges are under construction.

* Compiled from information provided by the Civil Aviation Branch, Air Services Division, Department of Transport, Ottawa.

3.—Aircraft Landing Areas classified by Type of Facility and Operator, by Province, as at Oct. 1, 1958

NOTE.—This information is based on the latest *Airport and Aerodrome Directory* published by the Department of Transport. Further details may be found in that publication and in the *Canada Air Pilot*.

Air Traffic Control.—The primary functions of the Air Traffic Control Service of the Department of Transport are to expedite and maintain an orderly flow of air traffic and to prevent collision between aircraft operating within controlled airspace, and between aircraft and obstructions on the movement area of controlled airports. This is accomplished through airport control, approach control and area control services, together with flight information, alerting for search and rescue, customs notification and aircraft identification. These services are described as follows:—

Airport Control is designed particularly to provide air traffic control service in the vicinity of major civil airports where the volume and type of aircraft operations, weather conditions and other factors indicate its need in the interest of safety. The service includes the control of pedestrians and vehicles on the manoeuvring area of the airport. Control is effected by means of direct radiotelephone communication or visual signals to aircraft and surface vehicles on and in the vicinity of controlled airports. The control towers are located at Patricia Bay, Port Hardy and Vancouver, B.C.; Lethbridge, Calgary and Edmonton, Alta.; Saskatoon and Regina, Sask.; Winnipeg, Man.; the Lakehead, Windsor, London, Toronto, Toronto Island, Ottawa and North Bay, Ont.; Montreal, Cartierville, Quebec, Val d'Or, Mont Joli and Sept Îles, Que.; Moncton and Saint John, N.B.; Sydney, N.S.; Gander, Nfld.; and Frobisher, N.W.T. Most of these control towers are in continuous operation but a few provide 16-hour daily service only.

Approach Control is provided by approach control towers at Edmonton and Calgary, Alta.; Winnipeg, Man.; Ottawa and North Bay, Ont.; and Frobisher, N.W.T. This service is in addition to the regular airport control service provided at these locations. Approach control service consists of the provision of standard IFR separation to aircraft operating in accordance with the Instrument Flight Rules within the local approach control area of the airport.

Area Control is designed particularly to provide air traffic control service to aircraft operating within controlled airspace during weather conditions which prevent a pilot from seeing other aircraft or obstructions and necessitate his reliance on instruments to conduct the flight. Area control centres are located at Vancouver, B.C.; Edmonton, Alta.; Winnipeg, Man.; Toronto, Ont.; Montreal, Que.; Moncton, N.B.; and Goose and Gander, Nfld. Each centre is connected with the control towers, radio range stations and operations offices within its area by means of an extensive system of local and long-line interphone or radio circuits, and through the radio communication facilities available at these offices to all aircraft requiring area control service. Each area control centre is similarly connected with the adjacent centres, including centres in the United States, for the purpose of co-ordinating the control of aircraft operating through more than one control area. This communications system permits each centre to maintain a continuous detailed record of the movements of all aircraft operating in accordance with the Instrument Flight Rules, and a general record of the movements of all aircraft operating in accordance with the Visual Flight Rules within its control area. In addition to providing area control service to aircraft operating within the controlled airspace over Newfoundland, the Goose and Gander area control centres provide this service within the airspace over approximately one-half of the North Atlantic Ocean. Area control service is provided for approximately 16,000 miles of airways, air routes and control channels.

Flight Information provides advice and information useful for the safe and efficient conduct of flight, including weather reports and forecasts, field condition reports, data concerning aids to navigation, traffic information, refuelling and transportation facilities and other related data of assistance to the pilot in planning or conducting a flight. Such service is provided by all air traffic control units but particularly by the eight area control centres.

Alerting for Search and Rescue is designed to ensure that the appropriate organizations are notified of aircraft in need of search and rescue aid and otherwise to assist such organizations, as required. Area control centres are responsible for notifying these organizations promptly of non-arrival at destination of any aircraft for which a flight plan or flight notification has been received. This requires the maintenance and constant supervision of a continuous record of active flights to ensure that non-arrival of any aircraft is detected immediately. The service is available to any pilot who files either a flight plan or a flight notification with any communications agency of the Air Services of the Department or directly with one of the area control centres or control towers.

Customs Notification Service facilitates the routine notification of the appropriate customs agency by pilots who plan to cross the Canada-United States boundary. The Air Traffic Control communications system and units concerned therewith forward pilot requests to notify the customs officer at the airport of destination.

Aircraft Movement Information Service is provided by area control centres to assist the Department of National Defence in establishing the identification of all aircraft operating within specified areas.

The number of controlled operations in Canada during 1958 was 3,076,645, an increase of 8.4 p.c. over 1957.

Operation Statistics.—The statistics given in Table 4 show the steady increase in recent years in passenger, freight and mail traffic.

4.—Summary Statistics of Civil Aviation, 1954-57

NOTE.—Figures include operations of Canadian international carriers and Canadian operations of foreign carriers.

PART VI.—OIL AND GAS PIPELINES*

A special article covering the history and development of pipeline construction in Canada appears in the 1954 Year Book at pp. 861-869. Additional information has been carried in each succeeding edition and the following Section brings pipeline development up to the end of 1958.

Section 1.—Pipeline Developments

Oil Pipelines.—Since 1950 when the first major oil pipeline went into operation in Canada, additional mileage has been constructed annually to serve the expanding petroleum industry. In 1950, 1,423 miles of line were in operation and by the end of 1957 a total of 6,800 miles had been constructed, exclusive of 1,840 miles of line in the United States used to transport Canadian crude oil only. Refineries from the West Coast of Canada and the United States Pacific Northwest to as far east as Toronto are now linked with producing fields in Western Canada.

The two principal components of the system are the trunk pipelines of Interprovincial Pipe Line Company and Trans Mountain Oil Pipe Line Company, both originating in Edmonton, Alta., although the former has a line connecting the Redwater field with its main receiving terminal at Edmonton. The Edmonton stations of both trunk lines are served by six feeder lines bringing in crude oil from the surrounding fields: Britamail Pipe Line Company Limited, Edmonton Pipe Line Company Limited, Imperial Pipe Line Company Limited (two lines), Pembina Pipe Line Company Limited, and Texaco Exploration Company, as well as by Interprovincial's line from the Redwater field.

Interprovincial Pipeline.—As of Dec. 31, 1957, the company's system extended from Redwater, Alta., to Port Credit, Ont., in the vicinity of Toronto, a distance of 1,930 miles. It is the longest crude oil pipeline in the world. To increase carrying capacity, the company has constructed parallel lines or loops on its existing right-of-way for a total of 1,116 miles. The aggregate length of pipe is therefore 3,046 miles. The system's continuous route traverses from west to east, the Provinces of Alberta, Saskatchewan and Manitoba, the States of North Dakota, Minnesota, Wisconsin and Michigan, and finally terminates in the Province of Ontario.

Further expansion took place in 1958. During the year 82 miles of 24-inch pipe were constructed at locations between Edmonton and Regina, giving the company two

* Prepared under the direction of Dr. Marc Boyer, Deputy Minister of the Department of Mines and Technical Surveys, by R. A. Simpson, Mineral Resources Division.

complete lines between Edmonton, Alta., and Superior, Wis. East of Regina more pumping capacity was added in both Canada and the United States. At the end of the 1958 program the capacity of the various sections was:—

<i>Section</i>	<i>Barrels per day</i>
Edmonton, Alta., to Regina, Sask.....	275,000
Regina, Sask., to Cromer, Man.....	335,000
Cromer, Man., to Gretna, Man.....	376,000
Gretna, Man., to Clearbrook, Minn.....	345,000
Clearbrook, Minn., to Superior, Wis.....	346,000
Superior, Wis., to Sarnia, Ont.....	258,000
Sarnia, Ont., to the Toronto area in Ontario.....	111,000

Gross deliveries to regions served by the pipeline were: Western Canada, 33,700,000 bbl.; U.S. refineries, 20,700,000 bbl.; Eastern Canada, 41,400,000 bbl.; and tankers out of Superior, 5,600,000 bbl. Tariff charges from Edmonton to Regina, Gretna, Superior, Sarnia and the Toronto area are 23½, 36, 44, 64 and 72 cents per bbl., respectively.

Trans Mountain Pipeline.—The Trans Mountain pipeline was constructed in 1952 and 1953 at which time the line consisted of 719 miles of 24-inch pipe connecting Edmonton and Vancouver, B.C. Between 1953 and 1957, 63 miles of pipeline were constructed to connect with refineries at Ferndale and Anacortes in the State of Washington. The capacity was increased from 120,000 bbl. a day to 185,000 bbl. a day. In 1957, two 30-inch loops of 51 miles each were constructed to increase the line's capacity to 250,000 bbl. daily.

During 1957 gross deliveries of crude oil to refineries in Washington totalled 27,100,000 bbl. while those to British Columbia totalled 22,300,000 bbl. Offshore shipments totalled 7,100,000 bbl., most of it shipped during the first half of the year for the California market. Tariff charges from Edmonton to Kamloops and Vancouver, B.C., and to Ferndale and Anacortes, Wash., were 38, 40, 42 and 42 cents, respectively. The marine loading charge at Vancouver was 2½ cents per bbl.

Other Oil Pipelines.—Oil pipeline construction slackened appreciably in 1957 and 1958. Pembina Pipe Line Limited constructed 116 miles of gathering lines and 32 miles of loop between Edmonton and Calmar. Throughput in 1957 increased 20 p.c. over the previous year to 38,000,000 bbl., and by November of the same year the system was serving 2,113 wells. Texaco Exploration Company looped 5½ miles of its main line.

In Saskatchewan, Trans Prairie Pipelines Limited increased its trunk line to 50 miles in the process of joining the Weyburn field to the line of Westspur Pipe Line Company termination in Midale which delivers oil from this and other fields in southeastern Saskatchewan to the Interprovincial line at Cromer, Man.

Natural Gas Pipelines.—Construction of natural gas pipelines in Canada was the dominating feature of all pipeline developments during 1957 and 1958. Altogether, 19,198 miles of gathering, transmission and distribution lines were in operation at the end of 1957. This was an increase of 5,479 miles from that in operation at the end of the previous year and indicates the intensity of preparations to make natural gas available to new markets in the Provinces of British Columbia, Manitoba, Ontario and Quebec. Of the total mileage, 1,774 miles were gathering lines, 6,970 miles were transmission lines, and 10,454 miles were distribution lines. Continued construction brought Alberta natural gas by pipeline as far east as Montreal before the end of 1958. Distribution lines constituted a large proportion of new construction, but during 1958 almost 2,300 miles of transmission lines and about 100 miles of gathering lines were added.

The most significant single development in 1957 was the completion of Canada's first major gas transmission line, Westcoast Transmission Company Limited, from the Peace River district to Vancouver and the Canada-United States border. In 1958 the most important single development was the completion of the Trans-Canada pipeline from Alberta to Eastern Canada.

Westcoast Transmission Company Limited.—The Westcoast Transmission pipeline, which was completed in October 1957, connects the producing fields of the Peace River district of British Columbia and adjacent areas in Alberta with consuming areas in the interior and lower mainland of British Columbia and with a United States pipeline on the Washington-British Columbia boundary. The completed system is made up of 803 miles of pipe. There are 650 miles of mainline 30-inch pipe linking Taylor with the areas to the south, 27 miles of 12-inch gathering lines in Alberta, 37 miles of 26-inch line connecting the Alberta fields with Taylor, and 89 miles of gathering lines varying in diameter from 26 inches to 8 inches in British Columbia.

Gas from fields in Alberta is free of sulphur or 'sweet' and does not require treatment in the Taylor processing plant. Gas from the British Columbia fields is 'sour' or contains sulphur and also condensates which must be removed in the processing plant prior to entering the transmission line.

When operations commenced, deliveries were made to Inland Natural Gas Company Limited for distribution in localities in the interior of British Columbia as far east as Trail; to British Columbia Electric Company for sale in Vancouver and environs; and to Pacific Northwest Pipeline Corporation in the United States.

Trans-Canada Pipeline.—Construction of the Trans-Canada pipeline began in June 1956 and by the time winter conditions halted work 210 miles of the 34-inch western section were completed. During 1957, 1,153 miles of pipeline were added; by September the line was completed to Winnipeg, which began receiving natural gas at that time, and by the end of the year companies in Brandon, Rivers, Hamiota, Neepawa and Portage la Prairie in Manitoba and Kenora in Ontario were being supplied by pipeline. By the end of January 1958, gas was being delivered to the Lakehead and the main construction had been halted for the winter. During 1957 Trans-Canada also constructed the 20-inch section of line from Toronto to Montreal with smaller laterals to Lindsay and to Ottawa. Domestic natural gas from southwestern Ontario fields and imported United States gas was 'borrowed' by Trans-Canada from Union Gas Company of Canada Limited to serve communities along the completed eastern section pending completion of the line making Alberta natural gas available in Eastern Canada. Construction of the final section of the line from the Lakehead to Toronto was completed in October 1958.

Initial capacity of the line was 300,000,000 cu. feet daily. Additional compressors to be installed during the first four years of operation will raise the capacity to 570,000,000 cu. feet a day and provision is made for an ultimate daily capacity of 780,000,000 cu. feet.

Other Natural Gas Pipelines.—British Columbia Electric Company Limited converted its Vancouver manufactured gas system to natural gas by mid-January 1957 and by the end of the year had added a further 585 miles of line to serve 15 communities in the lower Fraser River Valley. In October, Inland Natural Gas Company Limited completed its system to serve communities in the Cariboo, Okanagan and West Kootenay areas.

Gas pipeline developments in Alberta were highlighted by the construction of the initial gathering system of Alberta Gas Trunk Line Company. At the end of 1957 the company had 117 miles of 34- and 18-inch pipe in place to connect the Bindloss and Provost fields in Alberta with the Trans-Canada pipeline terminal at Burstall, Sask. In 1958, Alberta Gas Trunk extended its system to the Pincher Creek field in the Foothills region of southern Alberta. Northern Utilities Limited continued expanding its system and added 12 communities to its system. Canadian Western Natural Gas Company completed a distribution system in one community during the year.

The Saskatchewan Power Corporation, which serves all communities in Saskatchewan that have distribution systems except Lloydminster, Lone Rock and Unity, continued its program to construct distribution systems in all reasonably sized communities and supply them from its province-wide transmission system. Regina and six smaller communities were added in 1957 to the list of communities supplied with natural gas.

The chief construction in Manitoba was that by Winnipeg and Central Gas Company to supply Winnipeg with natural gas.

During 1957 pipeline construction in Ontario constituted a high proportion of the national total. Accelerated programs were undertaken in southern Ontario when Trans-Canada negotiated successfully for an interim supply of natural gas from Union Gas Company of Canada Limited which was and is importing United States natural gas to supplement its own supply from fields in southwestern Ontario. Ottawa and 14 smaller communities, principally along Lake Ontario and the St. Lawrence River, were served with natural gas one year earlier than originally expected as a result of this plan. Twin City Gas Company Limited and Northern Ontario Natural Gas Company Limited supplied Kenora, Fort William and Port Arthur. Major construction to serve localities along the Trans-Canada route was carried out in 1958. A total of 1,660 miles of distribution pipeline was laid in the province during the year, in addition to 600 miles of transmission line, exclusive of the Trans-Canada pipeline itself.

Section 2.—Oil Pipeline Statistics*

There were 32 oil pipelines operating in Canada at Dec. 31, 1957, with a total mileage of 6,873 compared to 6,051 at the end of 1956. Pipeline deliveries shown in Table 1 were made to non-pipeline carriers, foreign pipelines, and terminals including refineries and distributing centres.

During 1957 operating revenues of all oil pipelines except Amurex Oil Development Company, Anglo American Exploration Company, Anglo Canadian Oils Limited, Green River Exploration Company, Mobil Oil of Canada Limited, and Sarnia Products Line totalled \$87,719,710 compared with \$78,213,744 in 1956.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Communications media in Canada have been shaped to meet the needs of the country. Great networks of telephone, telegraph and radio services, inextricably bound together, provide adequate and efficient service which, in this era of electronic advancement, is under continual technological change and development. The familiar challenges of the country—its size, its topography, its climate, its small population—which have reared their heads in other areas of development, have had to be faced as well in the field of communications. That these have been overcome is evidenced by the fact that today Canada possesses communication facilities and services second to none in the world.

Section 1.—Government Control over Agencies of Communication*

Each telephone system (see p. 849) in Canada has become a monopoly within its own operating territory, a prerequisite of efficient service. Because of the lack of competition, the Federal Government, in 1903, organized the regulation of the rates and practices of those systems operating under federal charter. The Bell Telephone Company of Canada was made subject to regulation by the Board of Railway Commissioners for Canada under the provisions of the Railway Act. The British Columbia Telephone Company, originally the Western Canada Telephone Company, received its federal charter in 1916. The three Prairie Province telephone systems are operated by their respective governments and the many hundreds of other companies throughout Canada are also responsible to provincial regulatory bodies.

Land line telegraph and tariffs and tolls charged by companies incorporated by the Federal Government are also regulated by the Board of Transport Commissioners. Similarly, tariffs and tolls charged to the public by individuals or companies for radio-telephone communications within Canada are regulated by the Board of Transport Commissioners under the provisions of the Railway Act and the Regulations made under the Radio Act.

Except for those matters covered by the Canadian Broadcasting Act, radio communications in Canada are regulated under the Radio Act and Regulations which include control of any equipment liable to cause interference to radio or television reception (see

* Revised in the Telecommunications Branch, Department of Transport, Ottawa.

also p. 858). In addition, all radio communication matters are administered in accordance with the provisions of the International Telecommunication Convention and Radio Regulations annexed thereto and in accordance with such regional agreements as the Inter-American Telecommunications Convention and Inter-American Radio Agreement, and the North American Regional Broadcasting Agreement. (See also p. 858).

National radio broadcasting in Canada entered its present phase in 1936 when, with the passage of the Canadian Broadcasting Act, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission. The Act gave the Corporation wide powers in the operation of the system and gave to the Minister of Transport the technical control of all broadcasting stations.

During 1958 the Government established a Board of Broadcast Governors and the Canadian Broadcasting Corporation Board of Governors was abolished. The Board of Broadcast Governors will regulate the establishment and operation of radio and television broadcasting networks, the activities of public and private broadcasting stations and the relationship between them, in the interest of providing a national broadcasting service of high standard, basically Canadian in content and character. While the Minister of Transport is the licensing authority under the Radio Act, the Broadcasting Act requires that the applications for broadcasting station licences or for any change in an existing broadcasting station be referred to the Board of Broadcast Governors for its recommendation before being dealt with by the Department.

Section 2.—Telecommunications*

During the past half-century, Canada has experienced tremendous economic expansion. Population growth and the advance to new industrial frontiers have been matched by an upward surge in national productivity and general standard of living. Continuing development of Canada is dependent on both individual pioneering and the co-operative efforts of many industries and the telecommunications industry is filling a vital role in this drama of growth.

Business and industry have expanded and ventured into isolated areas assisted and promoted by Canadian telecommunications industries which have anticipated the needs of the future with vast programs of development in virgin territories. Technological development has been particularly important to the extension of telecommunications in Canada. To meet the demands placed upon it, the industry has constantly introduced newer and better equipment, tools and methods of operation. In the growth of urban centres, the development of rural communities and the pioneering of new territory, Canadian telecommunications agencies have constantly sought to provide the highest quality of service for the greatest number of people. The major railways, the hundreds of co-operating telephone companies, the radio and television companies and federal communications organizations work together with a common purpose, building networks of telecommunications from coast to coast. They provide such familiar services as telephone, telegraph, teletype, radio and television, and many other related means of communication. In addition, mutual co-operation has allowed them to satisfy a variety of defence needs. A number of defence projects along the northern reaches of the country have been undertaken by the major telephone organizations, notably the construction of the Mid-Canada Radar Line, as joint contractors for the Government.

Subsection 1.—Telephones

Alexander Graham Bell first transmitted human speech through electrically energized equipment in March 1876, and in August of the same year a one-way call from Brantford to Paris in Ontario marked the first successful long-distance test of the new invention. Soon after the instrument was perfected, telephone exchanges sprang up in many Canadian

* Textual data in the introduction of this Section and in Subsection 1 was prepared by The Bell Telephone Company of Canada, Montreal. Statistical material of Subsection 1 and Subsection 2 was revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics. Subsections 3 to 6 were revised in the Telecommunications Branch of the Department of Transport, Ottawa.

communities, sometimes two competing companies in one place. As a result, in April 1880, The Bell Telephone Company of Canada was established by Act of Parliament and authorized as the official agent for telephone service in thirty-two cities and towns across the country. However, it came to be recognized that, in the existing state of the industry, one company could scarcely develop and organize service over so wide a territory and separate companies were set up in British Columbia. The Bell Telephone withdrew from the Maritime Provinces in the 1880's and installations in the Prairie Provinces were sold to the respective provincial governments in 1908-09. The seven major telephone systems that developed across Canada worked together to establish long-distance service on a national basis and in 1932 they founded the Trans-Canada Telephone System, which now has eight full members including both shareholder-owned companies and provincial government systems. They are as follows:—

Avalon Telephone Company (joined in 1957)
Maritime Telegraph and Telephone Company, Limited
The New Brunswick Telephone Company, Limited
The Bell Telephone Company of Canada (serving Ontario and Quebec)
Manitoba Telephone System
Saskatchewan Government Telephones
Alberta Government Telephones
British Columbia Telephone Company

These eight systems, together with the Island Telephone Company (P.E.I.), Québec Téléphone (lower St. Lawrence), The Okanagan Telephone Company, and the North-West Telephone Company (associated with the British Columbia Telephone Company) comprise the Telephone Association of Canada. This organization was established to ensure general co-operation in telephone matters.

As already mentioned, the steadily rising demand for local and long-distance service has called not only for general expansion of Canadian telephone systems but for the constant introduction of modern facilities and services. A number of Canadian companies have developed what is called "Extended Area Service" in many of the communities they serve. This plan eliminates long-distance charges between the larger centres and their suburbs, or between two or more places with close community of interest.

As part of the transmission facilities needed to carry the great volume of long-distance traffic, the members of the Trans-Canada Telephone System collaborated to build a microwave radio relay network stretching from coast to coast, the longest such network in the world. It was placed in operation on July 1, 1958, and is maintained jointly, each system member being responsible for the section falling within its operating territory. The network is capable of carrying 2,400 long-distance conversations and two television programs at the same time.

For several years operators have been dialing many long-distance calls direct to the wanted telephone. The modern switching system which makes this possible also permits customer dialing of long-distance calls. Telephone-users in Toronto and other Ontario centres are now able to dial many direct long-distance calls. A long-range international plan, developed by the telephone companies of Canada and the United States, will eventually allow practically every telephone-user in North America to dial direct to almost any other telephone on the Continent. Direct dialing, an added convenience for telephone customers, will allow Canadian telephone companies to handle economically the ever-growing volume of long-distance calls.

The northward extension of industry in Canada has, of course, required the northward expansion of telephone communications. The North-West Telephone Company operates a radio chain from Vancouver up the British Columbia coast to Kitimat. Uranium City in northern Saskatchewan, six years ago nothing but muskeg and swamp, is provided with communications through a radio network out of Prince Albert, Sask. In Manitoba, the radio-telephone service reaches out to a large number of isolated settlements and bush camps, and also provides communications for aircraft and for boats plying Lake Winnipeg. Goose Bay in Labrador and the ore-rich Schefferville area are now in immediate telephone contact with the remainder of the world through a radio relay network operated out of Quebec City through Sept Îles.

Numerous flexible services are provided by Canadian telephone companies for business and industry. Special conference circuits can be quickly arranged, enabling widely scattered business interests to discuss their affairs without the inconvenience and expense of travel. Data transmitting and processing facilities allow rapid exchange of coded information and printed matter between plants and factories, warehouses, retail outlets and many other business and industrial locations. Telephoto and facsimile are other transmission services designed to provide photographic copy direct from the originator. Radio installations link the traveller with the regular telephone network, providing mobile service for such users as highway departments, trucking and construction firms, fire and ambulance services, and police departments. Oil pipeline companies also use the service as part of their communications arrangements to maintain contact between central offices, storage tanks, pumping stations and control units.

Telephone Statistics.—Telephone systems operating in Canada in 1957 numbered 2,637 as compared with 2,661 in 1956. There was a small increase in the number of co-operative systems in rural districts which rose to 2,177 from 2,172. In contrast, the number of shareholder-owned companies decreased to 330 from 349. The largest of the stock companies, The Bell Telephone Company of Canada, operating throughout the greater part of Ontario and Quebec, served 61 p.c. of all the telephones in Canada, and the British Columbia Telephone Company also shareholder-owned, served 9 p.c. of the total.

The number of telephones in use in Canada has almost doubled in the past ten years. At Dec. 31, 1957, there were 4,827,135 telephones in service compared with 4,499,325 in 1956 and 2,451,868 in 1948. The number of residential telephones and the number of business telephones increased by 9 and 6 p.c., respectively, during 1957. Rural telephones were up 4 p.c. and pay telephones 6 p.c. Several exchanges were converted to dial operation in 1957 and by the end of the year 80 p.c. of all telephones in Canada were dial-operated as compared with 77 p.c. in 1956. Pole-line mileage and wire mileage continue to increase year after year.

1.—Mileages of Pole Line and Wire and Number of Telephones in Use, 1948-57

NOTE.—Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

Year	Systems	Pole-Line Mileage ¹	Mileage of Wire	Telephones in Use					
				Business	Resi- dential	Rural ²	Public Pay	Total	Per 100 Population
	No.	miles	miles	No.	No.	No.	No.	No.	No.

¹ Ontario four-party telephones included under Rural Lines.

The major telephone systems record completed calls on representative days throughout the year and on this basis estimate the number of local conversations which, added to the actual count of long-distance calls, gives their total volume of business. Estimates are included for the smaller systems. The number of completed calls on all systems in 1957 was estimated at 7,990,725,000 compared with 7,764,805,000 calls in 1956, or an average of 1,710 calls per telephone and 498 calls per person compared with 1,726 calls per telephone and 486 calls per person in 1956.

Extended area service which eliminates toll charges between adjacent communities was introduced in more centres across Canada but, despite this service, long-distance calls increased by 18,193,000 from 1955 to 1956 and by 7,328,000 from 1956 to 1957.

3.—Local and Long-Distance Calls and Average Calls per Telephone and per Capita, 1948-57

NOTE.—Figures from 1928 will be found in the corresponding tables of previous Year Books beginning with the 1939 edition.

Year	Local Calls	Long-Distance Calls	Total Calls	Total Calls per Capita ¹	Average Calls per Telephone

² Excludes wages and employees for rural systems.

Subsection 2.—Telegraphs*

The early history of telegraphic communication in Canada is given in the 1934-35, Year Book, p. 778.

Telegraph Systems.—At the end of 1957, the 11 telegraph and cable companies in Canada showed impressive gains over the preceding year. These systems, composed of lines owned by the Federal Government and the chartered railway and telegraph companies, increased their property and equipment to \$169,000,000, about 12.9 p.c. above that reported in 1956.

A new record was set in 1957 for operating revenues of \$44,797,000, up 10 p.c. from the previous high of 1956, but net earnings dropped 16.5 p.c. to \$5,304,334. Telegrams transmitted were down 6.0 p.c. from the 1956 total, but cablegrams showed a 6.2-p.c. increase. In proportion to population, Canadian facilities are among the most extensive in the world and the systems operate their combined 451,700 miles of wire under a great variety of climatic and geographic difficulties.

* Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

6.—Summary Statistics of Canadian Telegraphs, 1948-57

NOTE.—Figures from 1920 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

¹ Excludes commission operators.

² Includes messages to and from vessels on the Great Lakes and the St. Lawrence River and messages to and from stations.

³ Excludes relayed messages.

Submarine Cables.—Four cable companies operate submarine cables landing in Canada: Canadian Overseas Telecommunication Corporation (*see* p. 861); the Commercial Cable Company; the Western Union Telegraph Company; and the French Telegraph Cable Company. These companies operate to stations in the United Kingdom, Ireland, the United States, Bermuda, Australia, New Zealand, and St. Pierre and Miquelon Islands.

The Eastern Telephone and Telegraph Company owns and maintains radio relay and cable facilities between the United States boundary and the international boundary in transatlantic cables off Clarenville, Nfld. The number of cables operating between connected stations and the length of cables are given in the following table.

Subsection 3.—Federal Government Telegraph and Telephone Services

There are some scattered settlements throughout Canada where commercial telephone and telegraph companies do not furnish service, yet where adequate communication must be provided in the public interest. The Federal Government, therefore, through the Minister of Transport, has assumed responsibility for such services as: telegraph and telephone connections to scattered settlements on Cape Breton Island; cable services to islands in the Bay of Fundy and Prince Edward Island; and a telephone service on the Magdalen Islands.

At Mar. 31, 1958, these telegraph and telephone services comprised 788.5 miles of pole line, 1,822.9 miles of open wire, 52 miles of aerial cable, 63.25 miles of submarine cable and seven radio stations. Telephone service was provided for 1,670 subscribers of whom 436 were served through lines connected to other company exchanges. There were 24,912 telegrams handled by this service in 1957-58, with operating expenses at \$313,489 and net revenues of \$66,272.

The Northwest Communication System formerly operated for the Government by Canadian National Telegraphs was fully entrusted to the latter for custody, management and operation effective Apr. 1, 1958. During the year ended Mar. 31, 1958, the system, which provides commercial telephone and telegraph services at airports, settlements and communities in northwest Canada, operated at a profit with revenues amounting to \$2,893,335 and expenditures totalling \$2,024,145.

Subsection 4.—Federal Government Meteorological Communications

Weather stations operated by the Meteorological Branch of the Department of Transport throughout Canada are linked coast-to-coast by means of teletype and in the remote northern areas by radio or radioteletype. The landline circuits are leased from commercial companies but some of the radio circuits are operated by the Federal Government.

Weather stations on the teletype network transmit their reports directly; other stations report *via* commercial facilities to the nearest station on the teletype line for transmission on the meteorological circuit. The reports are collected on a regional basis and then relayed to other parts of the country as required. There are two coast-to-coast half-duplex systems transmitting weather information, with main relay points at Vancouver, Edmonton, Winnipeg, Toronto, Montreal, Moncton, Halifax, Gander and Goose Bay. These main meteorological communication centres not only handle the distribution of weather information from Canada including the Arctic, but also effect international exchange with the United States and Europe and, through them, with all parts of the hemisphere. For the latter purpose, the Canadian Meteorological Branch and the British Meteorological Office share the cost of a leased duplex circuit in the transatlantic cable. Altogether, the Meteorological Branch uses over 39,000 miles of teletype circuits connecting 310 teletype offices.

In addition, facsimile is used to connect forecast offices in all parts of the country including radio facsimile to Arctic stations and ships at sea. This mode of communication permits certain functions of the forecast offices to be carried out at one central location and the processed data, in the form of weather maps, are then distributed throughout the country. The Canadian weather facsimile system is the only fully automatic system in the world. Chart transmissions from the Central Analysis Office in Montreal are made simultaneously to all parts of Canada. The equipment operates at 120 revolutions per minute, permitting a chart 22 x 18 inches to be transmitted in 18 minutes, with automatic sequential operation of the transmitter permitting charts of longer dimension. Altogether, the Meteorological Branch utilizes 14,000 miles of facsimile circuits, serving 64 forecast offices.

Subsection 5.—Federal Government Radio Communication Services

Radio in Canada traces its origin to the year 1900 when wireless telegraphy was introduced and placed under the jurisdiction of the Department of Public Works. The first commercial radio circuit was established between Chateau Bay, Que., and Belle Isle in the Strait of Belle Isle in 1901, replacing an underwater cable which was difficult to maintain. In the first days of radio there did not appear to be any necessity for special legislative control, but the growth of this new medium of communication was very rapid and the Wireless Telegraph Act of 1905 became the first legislation in Canada controlling radio communication.

Radio regulation and radio coast station services were under the jurisdiction of the Department of Public Works until 1909 at which time they were transferred to the Department of Marine and Fisheries where they remained until 1930, with the exception of the period 1914-22 when they were under the jurisdiction of the Department of Naval Services. In 1930, when a separate Marine portfolio was established, they became a Branch of that Department and then in 1936 a Division of the Air Services Branch of the newly formed Department of Transport. In 1936 an aviation radio service was organized within the Radio Division, and to it in 1948 was transferred the Government Telegraph and Telephone Service, which had been under the jurisdiction of the Department of Public Works since 1879. In 1950, the name was changed to Telecommunications Division, and later to Telecommunications Branch.

The present responsibilities of the Telecommunications Branch include the operation of radio aids to marine and air navigation, the regulation of all Canadian radio operations, the regulation of overseas cable communication services, the administration of the international telegraph regulations and operation of certain communication services for the public and for the handling of meteorological messages.

The radio activities of the Telecommunications Branch may be summarized as follows: (1) the administration of national and international radio laws and regulations and of regional agreements, involving the issuance of radio licences, inspection of radio stations, certification of radio equipment, examination of operators, allocation and monitoring of frequencies, study of radio wave propagation, compilation and settling of international accounts for radio messages, investigation and suppression of inductive interference to radio reception; and (2) construction, maintenance and operation of radio communication stations and radio aids to marine and air navigation.

National and international radio laws and regulations include: (1) the Broadcasting Act; the Radio Act and Regulations made thereunder; the radio provisions of the Canada Shipping Act and Ship Station Radio Regulations; (2) the International Telecommunications Convention and Radio Regulations annexed thereto; the Articles of the International Civil Aviation Convention applicable to aeronautical radio requirements; that part of the International Convention for the Safety of Life at Sea applicable to radio requirements for ships; the Inter-American Telecommunication Convention; the Inter-American Radio Agreement; the North American Regional Broadcasting Agreement; the Convention between Canada and the United States of America relating to the operation by citizens of either country of certain radio equipment or stations in the other country; and the Agreement between Canada and the United States of America for the promotion of safety on the Great Lakes by means of radio.

Licensing and Operation.—In all branches of radio, basic control is exercised over the right to establish a station, assignment of frequencies, operator standards, operating procedure, and general regulations concerning the manner in which radio stations are used.

Under the Broadcasting Act, the Board of Broadcast Governors regulates the establishment and operation of broadcasting networks, the activities of public and private broadcasting stations and the relationship between them, in the interest of providing a national broadcasting service of high standard, basically Canadian in content and character. While the Minister of Transport is the licensing authority under the Radio Act, the Broadcasting Act requires that applications for broadcasting station licences or for any change in an existing broadcasting station be referred to the Board of Broadcast Governors for its recommendation before being dealt with by the Department. Reasonably complete and technically acceptable applications are therefore referred to the Board of Broadcast Governors by the Department. Before such a licence may be issued, the approval of the Governor in Council is also required. With these exceptions, the technical control of broadcasting stations is carried out by the Telecommunications Branch of the Department of Transport.

The standard broadcast band is crowded with stations that are capable of interfering with one another over the entire North American region, particularly at night. A plan for the accommodation of the largest number of stations with the least interference was evolved as a result of extensive studies conducted by Canada, Cuba, the Dominican Republic, Haiti, the Bahama Islands, Mexico, and the United States and was embodied in the North American Regional Broadcasting Agreement.

Before a new standard broadcasting station can be licensed or before modifications can be made in an existing station, engineering briefs covering the selection or change of frequency, amount of power and design of the directional antenna system must be approved by the Department of Transport and notification sent to the signatory countries of the North American Regional Broadcasting Agreement. After the establishment or change is completed, proof of performance must be submitted to establish that the actual installation is in accordance with the approved plan.

Ten monitoring stations are maintained at suitable points across Canada to police and monitor the radio spectrum: to see that radio stations are complying with the procedure set forth for their particular service; to observe the emissions from stations and ensure that they comply with the rules applicable to their service; to detect non-licensed stations and ensure that stations are being used for the purpose for which they are licensed; to assist in the investigation of cases of inter-station interference; to make studies of spectrum occupancy with a view to finding spectrum space for new assignments; to make precise frequency measurements to determine if the operating frequencies of all classes of radio stations are within the tolerances as prescribed by domestic and international regulations. A mobile monitoring station is being equipped to carry out the investigation of those technical and operational aspects of emissions on frequencies that cannot be monitored by stations in fixed locations.

Under the Safety of Life at Sea Convention and the Canada Shipping Act, most passenger ships and larger cargo ships must be fitted with radiotelegraph or radiotelephone equipment, primarily for distress use. Approval is given for each make and model of equipment that comes up to the required standard and, in addition, the ship station as a whole is inspected after the licence is issued and periodically thereafter. Foreign ships are subject to inspection before sailing from Canadian ports to ensure that they conform with the requirements of the Safety of Life at Sea Convention. Also, certain passenger, cargo, and other ships plying the Great Lakes are inspected to ensure compliance with the requirements of the agreement between Canada and the United States for the promotion of safety on the Great Lakes by means of radio.

Standards have been developed for the installation of aircraft radio stations specifying in detail the techniques and materials that may be used, to ensure that such stations will satisfactorily perform the function for which they are intended. Inspections of radio stations aboard civil aircraft of all operational categories are carried out at prescribed periods. In-flight inspections of the radio communications and navigational aspects of proposed new air carrier operations, encompassing both land and oceanic routes, are also made as required.

Marine and aeronautical radio operator standards and related regulations are covered by international agreement. The International Telecommunication Convention prescribes the qualifications for radio operators on mobile stations and the Radio Act provides that all operators, both commercial and amateur, must pass examinations to prove their ability to operate the respective classes of stations on which they are engaged. Competent operators are required on all classes of stations in order that the technical requirements prescribed under international agreement be adhered to closely; they are particularly essential on ship and aircraft stations in the interests of safety of life.

Investigation and Suppression of Inductive Interference.—Under the Radio Act the use of electrical equipment that will produce harmful interference to radio reception is not permitted. The Telecommunications Branch of the Department of Transport maintains 63 cars equipped for measuring and locating sources of interference to broadcast,

television and other radio reception. In addition to locating the sources of interference, advice is given as to how it may be suppressed or eliminated. These cars operate from the permanent radio inspection offices located in 27 cities throughout Canada. During the year 1957, 11,820 sources of interference were located and suppression was obtained in all but a few cases. Power lines were the largest single source of interference, constituting 39 p.c. of the total. Apart from cases of actual interference, the Branch also gives technical advice and assistance to manufacturers of electrical apparatus, in an effort to reduce to acceptable levels the radio noise (interference) produced by such apparatus.

Recent amendments to the Radio Act provide for the prohibiting of the sale of electrical apparatus which will produce radio noise (interference) in excess of specified limits. Regulations specifying the limits to be met by particular types of apparatus are in preparation.

Another recent amendment to the Radio Act provides for exemption from the operation of the Act certain low-powered radio transmitting and receiving equipment which has been so Type Approved by the Department. Exemption Type Approval has been granted to a number of models of Garage Door Radio Controls, which consequently may be operated without the Radio Station Licence otherwise required.

Radio Revenue.—Regulations concerning the rendering and settlement of international accounts are contained in the International Telecommunication Convention and Regulations. Sources of revenue include commercial ship and inter-station messages handled by Departmental ship and land stations, radiotelegrams exchanged by foreign ships through Canadian coast stations, private commercial traffic *via* Departmental airway radio stations, and radio services rendered to aircraft of private airline companies by such stations. During the year ended Mar. 31, 1958, accounts with a gross value of \$449,792 were handled with respect to chargeable traffic *via* Marine Radio Stations consisting of 135,200 ship/shore radiotelegrams, 71,963 point-to-point messages and 25,960 duplex radiotelephone conversations. For air-to-ground and message communication services provided by aeronautical stations accounts were handled with a total value of \$582,824.

8.—Radio Revenue Collected by the Department of Transport, Year Ended Mar. 31, 1958

Stations	Revenue	Stations	Revenue
	\$		\$
Marine Stations—		Other Radio Revenue—concluded	
Private commercial messages and duplex radiophone calls	275,894	Licence fees (excluding private commercial broadcasting).....	380,146
Premium revenue.....	7,723	Rentals.....	269,461
		Miscellaneous.....	44,790
Aeronautical Stations—		Totals.....	1,531,511
Air-to-ground and message communication services.....	552,817		
Other Radio Revenue—		Collected from issue of private commercial broadcasting licences.....	443,050
Examination fees—Radiotelegraph Operators' Certificate of Proficiency.....	3,680		

Radio Services.—Services of the Telecommunications Branch of the Department of Transport in aid of marine and aeronautical navigation and meteorological radio communications are described in this Subsection. Details may be obtained on request from the Department of Transport, Ottawa.

Radio Aids to Marine Navigation.—Radio aids to marine navigation are provided for about 4,000 radio-equipped Canadian vessels and almost as many foreign ships using Canadian waters. A safety and communications service for shipping is provided covering the East and West Coasts, the Great Lakes, the St. Lawrence River and Gulf, Hudson Bay and Hudson Strait.

Coast Radio Stations provide a safety watch and communications service for ships at sea and provide, as well, regularly broadcast weather reports, storm warnings and notices of dangers to navigation. The stations carry out communications by radiotelegraph and/or radiotelephone, and many of them provide connections to land telephone lines so that ships may communicate directly with any telephone subscriber. At Halifax (CFH) and Vancouver (CKN), shortwave facilities are furnished for world-wide communications. These stations participate in the Commonwealth long-range ship communication scheme. The coast stations on Hudson Bay and Hudson Strait, in addition to the regular services, provide commercial communications for posts of the Hudson's Bay Company and various prospecting and development organizations, make weather observations, handle administrative traffic and assist aircraft with information, landing conditions and direction finding bearings.

Coast radio direction finding stations, operated on the Atlantic Coast and on Hudson Bay and Strait, enable ships to obtain a line of bearing from the station. No charge is made for this service. A chain of automatic radiobeacon stations is also maintained to provide a navigational aid to mariners by transmitting signals on which bearings may be taken by ships. These stations are arranged, where possible, in groups of three, transmitting on a common frequency but in proper time sequence so as to avoid interfering with one another. A navigator may thus obtain three bearings within three consecutive minutes and fix his location. For distance finding in foggy weather, a number of radio-beacons are synchronized with fog alarms at the same point. Ships may also request the transmission of signals from the coast stations for direction finding purposes.

Loran is a long-range radio aid to marine and air navigation which provides accurate fixes at distances up to 600 miles by day and 1,500 miles by night. Two Loran stations operate in Nova Scotia, three in Newfoundland and one on the West Coast. These stations, in conjunction with Loran stations of the United States Coast Guard, give service to ships and aircraft plying the North Atlantic and Pacific Oceans.

It has become general practice to equip merchant ships with *radar*, a valuable aid to marine navigation, and many important buoys are fitted with radar reflectors to increase their radar visibility. Two shore-based radar installations are in operation—one at Camperdown near the mouth of Halifax Harbour and the other on the Lion's Gate Bridge across the entrance to Vancouver Harbour.

Lighthouses, particularly at locations where they would otherwise be completely cut off from summoning help in case of illness, are provided with low-powered transceivers for use in emergencies. Lighthouse radiophone stations are organized into groups working into a control station. Ships at sea may obtain medical advice from any coast station. The messages are delivered to the port medical officer of the Department of National Health and Welfare and replies are transmitted to the ship free of charge. Radio and radar equipment used aboard vessels of the federal marine, pilotage and canal services, on vessels operated by the Department of Fisheries, the Department of Mines and Technical Surveys and the Department of National Revenue and on Canadian National Railway ferries is maintained by the Telecommunications Branch of the Department of Transport.

Radio Aids to Aeronautical Navigation.—Radio aids to air navigation are provided from coast to coast and from the Canada-United States border to the Arctic along and off the airways, and are used by many Canadian and foreign air carriers flying over Canadian territory. Trained engineers and technicians are assigned to six regional offices located at Vancouver, B.C., Edmonton, Alta., Winnipeg, Man., Toronto, Ont., Montreal, Que., and Moncton, N.B., to carry out the construction and efficient operation of facilities.

The principal radio aid to air navigation provided by the Department of Transport is the low-frequency *radio range station*, located approximately every hundred miles along airways. It provides specific track guidance to pilots by means of audible signals and the signals may also be used for the purpose of obtaining direction finding bearings. In addition, radiotelephone communications are provided between ground and aircraft, by which means pilots may obtain weather data, air traffic control instructions and other information concerning the safety of flights.

A number of very high frequency omni-directional ranges (VOR) are now being constructed. Unlike the existing radio range stations, this type of facility does not limit the aircraft using the station to one of four distinct courses, but enables the pilot to select any desired course. A six-station omni-range airway between Montreal, Que., and Windsor, Ont., with standard 200-watt installations located at Montreal, Ottawa, Stirling, Toronto, London and Windsor is in operation. In addition, installations at Wiarton, Winnipeg, Brandon and Broadview have been commissioned, and others at Gander and Lumsden are on test. Work is progressing on twenty-one other installations.

Aeronautical radiobeacon stations provide radio signals with which pilots may use their direction finding equipment to obtain relative directional bearings. *Fan markers*, operating on very high frequencies, are usually placed on an airway so as to inform the pilot when he may safely lose altitude after passing high terrain or to indicate accurately the distance from an airport. *Station location markers* are similar to fan markers except that the signal radiated is such that aircraft may receive the same indication irrespective of the direction of flight. They are installed at the same location as a radio range to enable a pilot to determine when he is exactly over the station, thus obtaining definite indication of position. Station location markers are installed at most radio range sites.

Long-range (150 nautical-mile) *surveillance radars* are being installed at 15 major airports from Halifax to Vancouver for air traffic control purposes. Short-range (40 nautical-mile) radars are operating at Winnipeg and Vancouver airports. A 50-mile range surveillance radar at Gander forms part of a complete ground controlled approach radar facility.

Instrument landing systems provide radio signals which, when received by special radio equipment aboard aircraft, permit pilots to approach airports for landing during periods of very low visibility. An installation normally consists of a localizer transmitter providing lateral guidance to the runway, a glide path transmitter for slope guidance to the approach end of the runway, two marker transmitters giving distance indications from the runway and a low-power radiobeacon (compass locator) to assist in holding procedures and lining up on the localizer course. The localizer and marker transmitters operate on very high frequencies, the glide path on ultra high frequencies and the compass locators on low and medium frequencies. Twenty-six instrument landing systems are in operation.

To assist in providing communication between aircraft and ground, *aeronautical radio communications stations* are located at strategic points across the country, including the Arctic. These stations, operating for the most part on high frequencies, provide communication to both domestic and international air carriers. The international communications stations form a major contribution on the part of Canada to international aviation. They may be grouped as follows: (1) communication for meteorological services; (2) communication for the air traffic control services; and (3) communication for the benefit of the airline operating agencies, with their aircraft and between their despatch offices.

External Telecommunication Services.—The Canadian Overseas Telecommunication Corporation was established in 1950 to maintain and operate, in Canada and elsewhere, external telecommunication services for the conduct of public communications by cable, radiotelegraph and radiotelephone and any other means of telecommunication between Canada and any other place, and between Newfoundland and any other part of Canada; to make use of all developments in cable and radio transmission and reception for external telecommunication services; to conduct investigations and research with the object of improving the telecommunication service generally and to co-ordinate Canada's external telecommunication services with the telecommunication services of other parts of the Commonwealth.

Soon after its establishment, the Corporation embarked on a program of expansion of overseas services designed to meet anticipated requirements of the future. In November 1953, the Corporation, on behalf of Canada, entered into an agreement with interests in the United States for the construction and maintenance of a transatlantic telephone cable. The laying of the first section of the cable started from Clarendville, Nfld., in June 1955, and the whole system was placed in service on Sept. 25, 1956. Total cost of the project amounted to approximately \$40,000,000 of which the Corporation's share was about one-tenth. A second transatlantic cable will be laid by 1961 and will be financed by the United Kingdom and Canadian Governments. It will provide 60 telephone circuits, each capable of being transposed into 48 telegraph circuits.

Transpacific radiotelephone and radiotelegraph services began operating from Vancouver to Australia and New Zealand on Nov. 1, 1956. Direct radiotelegraph service to Japan commenced in June 1957. Augmentation of overseas radiotelegraph facilities at Yamachiche and Drummondville, Que., became necessary as a result of the expansion of existing services and the introduction of new direct radiotelegraph circuits.

In December 1956, the Corporation initiated and brought into service International Telex, an overseas teleprinter switching system by means of which the user can teletype directly to a correspondent. Service is available across Canada. During 1958, the Corporation extended the International Telex Service to Japan, Australia and New Zealand.

Subsection 6.—Other Government, Miscellaneous and Commercial Radio Communication Services

Radio services have been established by all provincial governments, mainly for police, highway and forestry protection purposes.

Municipal government departments have steadily increased their use of radio to facilitate operations. This increase is noted in all municipal services using radio as a medium of communication with vehicles, i.e., police, fire, engineering, hydro, etc. In addition, the trend toward expansion in the employment of radio for urban mobile communication has shown no signs of abating. Such services as taxi, heavy construction, ready-mix concrete, oil pipeline construction and operation, veterinarian and rural medical have participated extensively in this increase.

Public utilities, power companies; provincial power commissions, oil exploration and mineral development organizations have considerably expanded their use of radio in both urban mobile and point-to-point radio fields.

Commercial Radio Communication Services.—The North-West Telephone Company operates a radiotelephone service between points in British Columbia. Under licences granted by the Department of Transport, the Company has established a number of permanent public commercial radiotelephone stations that are authorized to provide communication to private commercial radiotelephone stations located at isolated points in the province. The Company is also licensed to establish limited coast stations at Lulu Island, Powell River, Vancouver, Nanaimo, Victoria, Harrison Lake, Parksville, Alert Bay, Campbell River, Hardwicke Island, Halberg, Sumas Mountain and Prince Rupert, to provide a ship-to-shore service. These stations, used in conjunction with the ordinary telephone exchange, provide a duplex-radiotelephone service to isolated points and to certain ships at sea. They also provide a limited amount of service to stations of the land mobile category. The North-West Telephone Company is also licensed to provide emergency radiotelephone communication at any point in British Columbia and to carry out tests for extending the existing radiotelephone service throughout the province.

The North-West and British Columbia Telephone Companies have extended and expanded their multi-channel radio systems serving both the coastal and interior areas.

To provide trans-river communication in the lower St. Lawrence area, the following companies operate stations in the Province of Quebec at La Malbaie, Tadoussac, Rivière du Loup, Rimouski, Matane, Montmagny, St. Antoine, Île aux Grues, Cap Chat, Forest-

ville, Trinity Bay, Sept Îles, Baie Comeau, Clarke City, Gaspe Copper Mines, Mont Louis, Chicoutimi and Tour à Pica: La Compagnie de Téléphone de Charlevoix et Saguenay, La Compagnie de Téléphone de Kamouraska, the Quebec Telephone Corporation, Gulf of St. Lawrence Telephone Company and La Compagnie du Téléphone Saguenay.

In the Maritime Provinces there has been a general expansion of radio service provided by the telephone companies serving those areas.

The wire facilities between Saint John, N.B., and Digby, N.S., between Saint John, N.B. and Halifax, N.S., between Red Head, N.B., and Mount Hanley, N.S., between Lutz Mountain (Moncton), N.B., and Egmont, P.E.I., and between Charlottetown, P.E.I., and New Glasgow, N.S., are supplemented by radiotelephone connections. Stations at Saint John, Red Head, and Lutz Mountain (Moncton) are operated by the New Brunswick Telephone Company. The terminals at Digby, Halifax, New Glasgow and Mount Hanley are operated by the Maritime Telephone and Telegraph Company. The stations at Charlottetown and Egmont are operated by the Island Telephone Company.

The Bell Telephone Company of Canada provides a land mobile terminal radiotelephone service at numerous points in Ontario and operates a microwave link between Toronto and Ottawa, Ont., and Montreal, Que., which carries television programs and is capable of providing many additional telephone circuits. Radio links are also maintained between Pelee Island and Leamington, Ont., and across the St. Lawrence between Sorel and Joliette, Que. The Bell Telephone Company has continued to expand its microwave radio services in the Provinces of Ontario and Quebec and has completed an extension of commercial radio service to Goose Bay, Labrador. Plans have been made for the further extension of the latter service.

The Canadian National Railway Company operates an extensive radiotelegraph and radiotelephone service in Newfoundland including links between Red Cliffs, Cape North, N.S., and Sydney, N.S. This Company is also authorized to provide a limited coast-station service at Port aux Basques, Nfld. The Canadian National Railway Company and the Canadian Pacific Railway Company have jointly established microwave circuits between Toronto and Windsor, and between Montreal and Quebec City.

The Avalon Telephone Company operates public commercial stations in Newfoundland to supplement its wire lines and to provide telephonic communication with isolated communities.

The Manitoba Telephone System operates radiotelephone links involving stations at the following points: Riverton, Manigotagan, Hecla Island, Gimli, Norway House, Bissett, Great Falls, The Pas, Snow Lake and Winnipeg. In addition, the System operates stations at Gimli, The Pas and Norway House to provide terminal service for ships operating on Lake Winnipeg.

Norwesto Communications Limited operates a public commercial radiotelephone service to provide telephonic communication to privately owned stations at isolated points throughout the northwestern part of Ontario. Stations are located at Kenora, Red Lake, Ball Lake, Sioux Narrows, Dryden, Sioux Lookout, Minaki and Redditt, which are used in conjunction with the ordinary telephone exchanges.

The Red Lake Telephone Company operates a public commercial radiotelephone station at Madsen, Ont., to provide a connection between the local wire telephone system and the Norwesto Communications Limited network.

The Okanagan Telephone Company operates a public radiotelephone service between Revelstoke and Arrowhead, B.C., and a public commercial terminal station at Kelowna to provide telephonic communication to privately owned stations at isolated points in the Kelowna area.

The Alberta Department of Telephones has completed the installation of multi-channel microwave systems from Edmonton to Peace River and Edson, respectively. It has also expanded the existing radio services which it provides throughout the Province of Alberta. The Saskatchewan Government Telephones in the Province of Saskatchewan and the Manitoba Telephone System in the Province of Manitoba are constructing major microwave extensions to serve the Yorkton and Estevan areas in Saskatchewan and the Flin Flon and The Pas areas in Manitoba. In addition, the Manitoba Telephone System has completed a microwave extension from Winnipeg to Fargo, North Dakota, in co-operation with the United States common carrier in that State.

The Pacific Great Eastern Railway Company has inaugurated service on a multi-channel microwave system in the interior of British Columbia extending from Clinton to the Fort St. John/Dawson Creek area.

Restricted common carrier mobile radio systems for the provision of public communication service to land vehicles have been established in all major centres throughout Canada.

Subsection 7.—Radio and Television Broadcasting

Broadcasting in Canada as it has developed over a period of some forty years is a combination of public and private enterprise. Under the Broadcasting Act, proclaimed Nov. 11, 1958, authority for the national broadcasting system is vested in a Board of Broadcast Governors, consisting of three full-time members and twelve part-time members appointed by the Governor in Council. Under the Act, this Board is empowered to "regulate the establishment and operation of networks of broadcasting stations, the activities of public and private broadcasting stations in Canada and the relationship between them and provide for the final determination of all matters and questions in relation thereto". The powers of the Board of Broadcast Governors include making and enforcing of broadcasting regulations, recommending to the Governor in Council on licensing matters, and ruling on matters of dispute between broadcasters.

Part II of the Broadcasting Act provides authority for the publicly owned Canadian Broadcasting Corporation. The Corporation, consisting of a President and a Vice-President and nine other directors appointed by Governor in Council, is established "for the purpose of operating a national broadcasting service". CBC is accountable to Parliament through a Cabinet Minister designated by Governor in Council. The CBC is empowered to establish and maintain program networks and stations.

As of Mar. 31, 1958, there were 22 CBC radio stations and 10 CBC television stations; 98 privately owned radio stations and 36 privately owned television stations. All the privately owned television stations and many of the privately owned radio stations are affiliated with the CBC and help to distribute national radio and television services over five networks operated by the CBC—in radio, the Trans-Canada, French and Dominion networks, and in television, the English and French networks.

Radio Broadcasting Facilities.—As stated above, the CBC operates three networks: the Trans-Canada and Dominion networks serving English language audiences from the Atlantic to the Pacific, and the French language network extending from Moncton, N.B., to Edmonton, Alta. As at Mar. 31, 1958, the Trans-Canada network was made up of 26 basic stations—13 CBC-owned and 13 privately owned. There were 19 supplementary stations, four of which were CBC-owned Newfoundland stations. The Dominion network consisted of 31 basic stations of which 30 were privately owned. Nineteen supplementary privately owned stations also received Dominion network service. The French network had five basic stations, four of which were CBC-owned and one privately owned, and 20 privately owned affiliated supplementary stations.

Table 9 lists the broadcasting stations of the CBC radio networks.

9.—Broadcasting Stations of CBC Radio Networks, as at Mar. 31, 1958

NOTE.—The stations marked with an asterisk (*) are CBC-owned. The symbols used in the Power column have the following meanings: DA-1, one directional antenna both day and night; DA-2, two directional antennae, one in daylight, the other at night; DA-N, single directional antenna used at night only. Wattage of some stations differs between day and night as shown.

Television Broadcasting Facilities.—As at July 1, 1958, there were 31 basic television broadcasting stations in operation on the English network. On the French network, nine stations were in operation (two of which were CBC-owned). These stations were located and powered as follows:—

10.—Broadcasting Stations of CBC Television Networks as at July 1, 1958

¹ The Atlantic Region includes two non-connected low-power relay stations—CFSN-TV, Stephenville, Nfld. and CFLA-TV, Goose Bay, Labrador.

It was estimated that at the end of March 1958 more than 86 p.c. of all Canadians were within reach of the national television system. Microwave facilities linking television stations from coast to coast for instantaneous telecasting of programs went into full operation July 1, 1958. When television broadcasting began in September 1952, 146,000 television sets were in use in Canada. One year later the number had tripled and by March 1958 more than 3,000,000 receivers were in use in Canadian homes.

Canadian Broadcasting Corporation Service.—The Corporation's Head Office is located at Ottawa and provides over-all direction for the English and French language television and radio services through the CBC's seven operations divisions: British Columbia; Prairies; Ontario and English networks; Quebec and French networks; Maritimes; Newfoundland; and the International Service. To give expression to varying interests across Canada, the CBC maintains offices and production facilities at St. John's, Nfld., Sydney and Halifax, N.S., Moncton, N.B., Chicoutimi, Quebec and Montreal, Que., Ottawa, Toronto and Windsor, Ont., Winnipeg, Man., Regina, Sask., Edmonton, Alta., and Vancouver and Prince Rupert, B.C.

Domestic Radio Program Service.—During the year ended Mar. 31, 1958, about 1,617 programs representing 497.5 hours of broadcasting were presented each week over the CBC Trans-Canada, Dominion and French radio networks. Of the total broadcasting hours in 1957-58, 71 p.c. was scheduled on the Trans-Canada network; the Dominion network released 6 p.c. and the remainder was released on the French network.

The CBC originated and produced 94 p.c. of its network broadcasts. Of the remainder, 1 p.c. came from private stations and 5 p.c. were exchange programs from the United States and the British Broadcasting Corporation. An analysis of network programs by categories for 1957-58 shows that a large proportion of CBC radio network time was devoted to music—an estimated 44 p.c.; 61 p.c. of programs broadcast were predominantly entertainment programs (music, drama, sports, creative arts, etc.); 25 p.c. were predominantly information programs (news and weather, farm and fisheries, science, nature, etc.); and 14 p.c. were predominantly idea or opinion programs. Table 11 presents an estimate of the hours of radio programs by category. The figures are based on programs on all three CBC radio networks, 'live', recorded, or recorded for later presentation. They do not include the 'delayed' presentation of programs that are transmitted at different times by different sections of the network to meet the convenience of listeners in the various time zones. However, they do include regional programming presented on sections of the network exclusively for listeners in the areas served by such regional breakdowns of the network. The classifications in this table are based on the predominant function of each program although many programs serve more than one interest at the same time.

11.—Classification of CBC Radio Programs, Year Ended Mar. 31, 1958

Domestic Television Program Service.—During the year ended Mar. 31, 1958, the CBC English-language television network presented 54.25 hours of programming a week. Of this, 57 p.c. was produced by CBC, 39 p.c. was drawn from sources in the United States, 2 p.c. from non-CBC sources in Canada, and 2 p.c. from the United Kingdom and other countries. Of the 65.2 hours presented by the CBC French-language television network each week, 72 p.c. originated with the CBC, 3 p.c. with other Canadian sources, and 15 p.c. with sources in France. The remaining 10 p.c. was procured in the United States, the United Kingdom and other countries.

¹ Less than one hour.

Radio and Television Talent.—The CBC is the main single outlet for Canadian talent in the fields of music, drama and other entertainment. In the year ended Mar. 31, 1958, 16,801 artists were employed by the Corporation. During the year, the CBC spent approximately \$12,691,146 for talent—\$9,961,995 for radio and \$6,555,309 for television. Of the total, \$2,729,150 was for scripts, performing rights, music and musical arrangements. The remainder was in the form of direct fees to musicians, singers, actors and other performers. These figures cover 'outside' or non-staff talent and do not include CBC personnel in such categories as producers and directors, scenery, graphics and costume designers, and film editors and commentators.

CBC International Service.—The International Service, which is operated by the Canadian Broadcasting Corporation on behalf of the Government of Canada, broadcasts information about Canada and other radio programs to shortwave listeners in many countries of the world. Programs are transmitted in sixteen languages—English, French, German, Spanish and Portuguese (to Latin America), Dutch, Italian, Danish, Norwegian, Swedish, Czech, Slovak, Russian, Ukrainian, Polish and Hungarian.

The Service is fully financed through annual grants by Parliament and has its headquarters and studios in the Radio Canada Building in Montreal. Programs are sent by landlines from the studios in Montreal to Sackville, N.B., six hundred miles away. Sackville is the site of the Service's two 50-kw. shortwave transmitters and directional antenna array system. Broadcasts were officially inaugurated on Feb. 25, 1945, and one of the principal purposes of the programs at that time was to provide information and entertainment to the members of the Canadian Armed Forces in Europe. Later, programs were designed to give people in other countries a word picture of Canada and the Canadian viewpoint in world affairs.

Regular programs are broadcast to Europe, Latin America and North America as well as to the Caribbean, Australia and New Zealand. Broadcasts are on the air about 100 hours a week; in the main, programs consist of news, commentaries, interviews, talks and other related topical material. Through the use of supplementary facilities, special programs are sent to the countries of the Commonwealth and elsewhere when the occasion warrants it. Some of the shortwave programs from Canada are rebroadcast by the Canadian Army Radio Station CAE in Werl, Germany, and by other radio organizations. The shortwave transmitters at Sackville are also employed to transmit programs to Canada's Far North beyond the normal signal range of the CBC domestic transmitters in Canada. A recorded radio program service is provided regularly to Austria, Greece and Finland for use on the radio broadcasting facilities of those countries.

In addition to the transmitted service, the International Service provides transcriptions free of charge to radio organizations outside Canada. These include music by Canadian composers and performers, and Spoken-Word Transcriptions in English, French and Spanish. The Spoken-Word Transcription Service includes plays, documentaries, talks, biographical sketches, folklore and other programs designed to give a word picture of Canada, past and present.

Letters and other communications from listeners are being received at the rate of between 25,000 and 30,000 a year at the present time. The International Service replies in the language of the letter-writer and forwards printed information on a variety of subjects. Seven times yearly the International Service publishes an illustrated Program Schedule which is printed in the languages of the shortwave programs and contains program information, and times and frequencies of the broadcasts. About 190,000 copies are distributed throughout the world.

Canadian Broadcasting Corporation Finances.—The operations for the year ended Mar. 31, 1958, resulted in an excess of expense over income of \$4,968,475 after providing \$2,276,719 for depreciation. The surplus of the radio and integrated services was \$18,828 as compared to a deficit of \$4,987,303 for the television service.

The Corporation's income from all sources was \$21,278,251 higher than the previous year. The increase in total revenue was offset by an advance in expenses of \$10,549,153, attributed to the development of the national television service and to the general rise in costs experienced by all industries.

13.—Income and Expenses of the CBC, Years Ended Mar. 31, 1957 and 1958

Item	1957	1958
	\$	\$
Income—		
Grants under Parliamentary appropriations.....	18,250,000	24,345,331

Provision for depreciation.....	1,969,754	2,276,719
Excess of Expenses¹ over Income.....	1,561,211	4,968,475

¹ Included in the above expenses are \$72,000 for executive officers' remuneration, \$4,950 for honoraria for members of the Board of Governors and \$11,844 for legal expenses.

Privately Owned Stations.—As stated previously, privately owned broadcasting stations are subject to the Radio Act, the Canadian Broadcasting Act and Regulations made thereunder, and the provisions of the Radio Regulations annexed to the International Telecommunication Convention and Regional Agreements in effect in Canada. Since Mar. 31, 1923, private commercial broadcasting station licences have been required by government regulation and both sound and television broadcasting stations are now authorized by this class of licence.

Any application for a licence to establish a new private station or for an increase in power, change of channel, or change of location of any existing private station must be referred by the Minister of Transport to the Board of Broadcast Governors; the Board, after giving public notice thereof in the *Canada Gazette*, will make such recommendations to the Minister of Transport as it may deem fit. The approval of the Governor in Council must be obtained before any licence for a new private station is issued. Private commercial broadcasting station licences are conditional upon the ownership or control of the stations, and the shares of capital stock of licensed companies in certain instances may not be transferred without the permission of the Minister of Transport having been first obtained upon the recommendation of the Board of Broadcast Governors. Proof of performance statements showing public service, community service and light programming are filed annually with that Board. Organizational and financial statements are filed annually, on a confidential basis, with the Department of Transport.

The first sound broadcasting in Canada took place when a privately owned communications company in Montreal was authorized to transmit programs on an experimental basis during the latter part of 1918 and in the winter evenings of 1919 over its Station XWA. Under the first licensing regulations in the year ended Mar. 31, 1923, 34 licences were issued. By Mar. 31, 1958, the number had increased to 212, of which 177 were AM standard band stations, 27 were frequency modulated stations and eight were shortwave stations. Of the 177 standard band stations, four were operating with a power of 50,000 watts, 14 with 10,000 watts, 49 with 5,000 watts, one with 2,500 watts, 65 with 1,000 watts, one with 500 watts, 41 with 250 watts, and two with 100 watts.

A privately owned broadcasting station is required to pay to the Receiver General of Canada an annual licence fee based on the gross revenue for licence fee computation for the fiscal year of the station. Because the fiscal years of the privately owned stations end at different dates it is difficult to estimate the gross revenue of all stations for any one year. The Report of the Royal Commission on Broadcasting published in 1957 indicates that gross sales for 144 broadcasting stations amounted to approximately \$36,000,000 in 1955, all of which was obtained from commercial advertising.

The first privately owned television broadcasting station in Canada at Sudbury, Ont., was authorized to commence scheduled broadcasting on Oct. 20, 1953. By Mar. 31, 1958, 36 privately owned television stations were in operation (see Table 10).

International Agreements.—In 1937 a conference was held at Havana, Cuba, to review the broadcasting situation in the North American region and to develop a workable plan which would permit the growth of the broadcasting industry. The product resulting from the deliberations of that conference was the treaty known as the North American Regional Broadcasting Agreement which came into effect in 1941 and was extended by an instrument known as the *modus vivendi* or interim agreement signed at Washington in 1946. In 1949 and 1950, conferences were held at Montreal and Washington, and a new North American Regional Broadcasting Agreement was drafted in December 1950 which has been implemented as an administrative arrangement.

The Canadian-United States Television Agreement provides for the assignment and utilization of 82 television channels between 54 and 890 mc/s along the border between Canada and the United States of America, within an area of 250 miles on either side of the International Boundary. This Agreement provides that all station assignments within

its scope shall be made in accordance with the Agreement and shall have an effective radiated power in any vertical or azimuthal plane not in excess of 100,000 watts for Channels 2 to 6, of 325,000 watts for Channels 7 to 13 and of 1,000,000 watts for Channels 14 to 83.

Section 3.—The Post Office

The Canada Post Office Department was created at the time of Confederation in 1867 by the Canada Post Office Act to superintend and manage the postal service of Canada under the direction of a Postmaster General. For almost a century before Confederation, postal services in the Canadian provinces had been controlled by the British Postmaster General and administered by his deputies. Under the French régime a courier service had been organized as early as 1703 between Quebec, Trois Rivières and Montreal. In 1734 a post road was constructed over the same route and post houses, complete with post horses and vehicles, were established for the use of travellers. In 1851 the control of their post offices was assumed by the different provinces of British North America and at Confederation these systems merged to form the Canada Post Office.

Functions.—The basic tasks of the Canadian Postal Service are to receive, convey and deliver postal matter with security and dispatch. In discharging these duties it maintains post offices and utilizes air, railway, land and water transportation facilities; associated functions include the sale of stamps and other articles of postage, the registration of letters and other mail for dispatch, the insuring of parcels, the accounting for COD articles, and the transaction of money order and Post Office Savings Bank business. Because of its widespread facilities, it has been found expedient for the Post Office to assist other government departments in the performance of certain tasks including the sale of unemployment insurance stamps, the collection of government annuity payments, the distribution of income tax forms and Civil Service employment application forms, and the displaying of government posters.

Post offices are established wherever the population warrants. Those in rural areas and small urban centres transact all of the functions of the city office. In larger urban areas postal stations and sub-post offices have full functions similar to the main post office, including a general delivery service, lock-box delivery and letter-carrier delivery.

At Mar. 31, 1958, there were 11,768 post offices in operation compared with 11,879 in 1957. Letter-carrier delivery, performed in 152 urban centres, employed over 6,690 uniformed letter carriers. Postage paid in 1957-58 by means of postage stamps amounted to \$81,192,008 as compared with \$77,735,659 in 1957. Post office money orders, issued for any amount not exceeding \$100 and payable in almost any country of the world, were sold at more than 8,000 post offices and money orders payable in Canada only, for amounts not exceeding \$16, were sold at some 2,800 additional post offices. Post Office Savings Banks operate in all parts of the country and, on Mar. 31, 1958, had total deposits of \$34,895,729.

Organization.—The Canada Post Office includes an Operating Service and Headquarters at Ottawa. The Operating Service is organized into five regions each under a Regional Director, who is the field representative of the Deputy Postmaster General. There are five Headquarters Branches: Administration, Operations, Transportation, Financial, and Personnel—each under a Director. Operating and secretarial features in the operating field affecting the post offices and local mail services in urban centres are taken care of by the local postmaster. District office functions relating to services in the district and all inspections and investigations are under District Directors of Postal Services in strategic centres across the country.

Postal service is provided in Canada from Newfoundland to the west coast of Vancouver Island and from Pelee Island, Ont. (the most southerly inhabited point of Canada) to settlements and missions far into the Arctic. Canada's airmail system provides several transcontinental flights daily and constitutes a great air artery from St. John's, Nfld., to Victoria, B.C., intersected by branch lines and connecting lines radiating to every quarter and linking up with the United States airmail system. Since July 1, 1948, all

first class domestic mail up to and including one ounce in weight has been carried by air between one Canadian point and another, whenever delivery can thus be expedited. On Apr. 1, 1954, this service was extended to first class items up to and including eight ounces in weight. Air stage service provides the only means of communication for many areas in the hinterland. There were approximately 38,334 miles of airmail and air stage routes in Canada in 1958 as compared with 35,700 miles in 1957.

The principal means of mail transportation is the railway mail service that operates along about 27,930 miles of track and, in 1958, covered over 41,675,000 service-miles. A staff of 919 mail clerks prepared the mails for prompt delivery and dispatch while en route in the railway mail cars.

The rural mail delivery organization provided direct postal service over approximately 5,476 rural mail routes in 1958, extending over 130,000 route-miles and serving 480,848 rural mail boxes. Rural mail routes are generally circular in pattern and average about 24.5 miles in length. Considerable progress has been made towards the development of mail service by means of group boxes—a service intended for the more densely populated rural areas and for suburban residents not within the area of letter-carrier delivery service. About 3,352 side services were in operation in 1958 to transport mail between post offices, railway stations, steamer wharves and airports, and 2,143 stage services operated to convey mail to and from post offices not located on railway lines. Transportation of mail by motor vehicle on highways is being developed and over 307 such services are in operation, many of them replacing or reducing conveyance by rail. A local exchange of mails between offices on the route is effected by way-mail wallet. In 1958 there were approximately 805 city mail services transporting mail to and from post offices, postal stations and sub-post offices, collecting mail from street letter-boxes and delivering parcel post. The 10,971 land-mail service couriers employed travelled approximately 50,000,000 miles during the year. Land-mail services are performed under a contract system, the contracts being awarded to the person submitting the lowest tender and competent to provide all the requisite equipment.

Coastal mail service is conducted by 23 contractors who operate as far north along the West Coast as Alaska and on the East Coast to the northern part of Labrador.

Post Office Statistics.—Tables 14, 15 and 16 give the numbers of post offices in operation together with revenue and expenditure for recent years.

14.—Post Offices in Operation, by Province, as at Mar. 31, 1955-58

1958.....	177,492,783	152,919,881	153,319,782	—399,901

¹ Gross revenue less commissions and allowances to postmasters, and other smaller items.
² Excludes rental of service staff and staff post offices.

³ Newfoundland included from 1950.

The gross revenue receipts shown in Table 15 are received mainly from postage, either in the form of postage stamps and stamped stationery, or postage meter and postage register machine impressions. Some postage is also paid in cash without stamps, stamped stationery or meter and register impressions. The gross value of the postage stamps and stamped stationery sold during each of the latest five fiscal years was: \$64,546,067 in 1953-54, \$74,583,720 in 1954-55, \$75,559,106 in 1955-56, \$77,735,659 in 1956-57 and \$81,192,007 in 1957-58. Receipts from postage meter or postage register impressions and postage paid in cash by other means were as follows: \$55,398,788 in 1953-54, \$65,516,441 in 1954-55, \$70,696,501 in 1955-56, \$78,041,479 in 1956-57 and \$83,706,744 in 1957-58.

16.—Gross Postal Revenue of Offices Collecting Upwards of \$10,000, Years Ended Mar. 31, 1957 and 1958

NOTE.—Money order commissions are not included in gross postal revenue. Provincial totals of postal revenue include post offices not separately listed.

Section 4.—The Press

About 111 daily newspapers, counting morning and evening editions separately, are published in Canada. They have an aggregate reported circulation of over 4,000,000—about 82 p.c. in English, 17 p.c. in French and the remainder in other languages. Thirteen

of the daily newspapers enjoying circulations in excess of 100,000 account for more than half of the circulation. French dailies, as would be expected, have their widest circulation in Quebec where 10 of the 13 in existence in 1957 were published. Some of the largest of these papers have been established in that province for over 60 years. Foreign-language publications, shown in Table 22, are gaining in circulation as a result of recent heavy immigration.

Weekly newspapers serve more people in rural communities than do the dailies. They cater to local interests and exercise an important influence in the areas they serve.

The Canadian Press, a co-operative organization owned and operated by Canada's daily newspapers, provides its 97 members with world and Canadian news and news photographs, mostly by means of teletype and wirephoto transmission. It also serves weekly newspapers and radio and television stations. It is, in effect, a partnership through which each member newspaper provides to its fellow members the news of its particular area and through which the general news of the world is brought to Canada. Cost of editing and transmission is divided among members according to the population of the cities in which they publish. CP gets world news from Reuters, the British agency, and from the Associated Press, the United States co-operative, and these agencies have reciprocal arrangements with CP for their coverage of Canada.

The United Press International (the British United Press and the United Press combined in May 1958) also provides a service of Canadian and world news, news photographs and related features for Canadian newspapers, radio and television stations. There are, as well, special news services operated by affiliated newspapers and individual newspapers. Several foreign news agencies have representatives in Canada to supply and interpret news of Canadian origin, as have a number of the leading United Kingdom and United States newspapers. Most of the latter are located at Ottawa.

Press Statistics.—The following tables are based on data estimated from *Canadian Advertising*. One serious difficulty has been encountered in connection with the compilation of circulation figures. Reliable circulation figures are relatively easy to obtain for daily newspapers because, in their own best interest, such papers qualify for and subscribe to the Audit Bureau of Circulation requirements: for these, A.B.C. 'net paid' figures have been used. However, it is difficult to obtain reliable circulation figures for many weekly newspapers and for magazines, and those shown in the following tables should be used with reservations.

18.—Estimated Numbers and Circulations¹ of reporting Daily and Weekly² English-Language Newspapers, by Province, 1955-57

NOTE.—Figures from 1945 will be found in the corresponding table of previous Year Books beginning with the 1947 edition.

A HISTORY OF CANADIAN JOURNALISM, (CIRCA) 1900 TO 1958

An article in the *Canada Year Book* 1957-58 considered the history of Canadian journalism from its beginnings in 1752 to (circa) 1900. The following account examines press growth from the start of the twentieth century to the time of writing.

FOURTH PERIOD: THE MUTATION, (CIRCA) 1900 TO 1958

After the journalistic transplant had at last completed its spread throughout the geographic limits of Canada by 1900, the plant itself began to change markedly in character. So complete was the transformation that the word "mutation" is perhaps not too extreme a label to attach to Canada's fourth press period. The change thus indicated was particularly true of the daily newspaper, which became by far the most important of the nation's journals. Certainly in the period since 1900 the characteristic news-organ has taken on attributes that would make it virtually unrecognizable to the mid-Victorian reader. Extensive gains in circulation, a great increase in timeliness, a remarkable enlargement of mechanical plant and business operation, and innovations of newspaper production and news presentation were the essential features of the transformation.

These striking changes were caused by the interaction of two factors—a remarkable economic and population growth and revolutionary developments in the technology of journalism. During the modern half-century, as the national wealth grew and as social, political and other conditions became more and more favourable, the Canadian populace became greatly enlarged, producing a sharp and sustained increase in the number of newspaper readers. Had this been the only development to take place, the result would prob-

CIRCULATION OF CANADIAN DAILY NEWSPAPERS COMPARED WITH TOTAL AND URBAN POPULATION, 1901-57

LOGARITHMIC PROJECTION OF THE TREND
OF GROWTH IN CIRCULATION OF DAILY
NEWSPAPERS IN RELATION WITH POPULATION,

ably have been nothing more than the creation of a great many new journals to serve additional Canadian subscribers. Instead, however, increased readership was taken care of by the use of mechanical improvements in newspaper production rather than by establishment of more newspapers. Indeed, there was an actual decrease in the numbers of Canadian dailies during this period of expanding circulations. Thus the modern paper is not a mere counterpart of its nineteenth century predecessor but has inevitably become a much larger entity. At the same time, because today's daily journal, through technical improvements, furnishes many news services which the 1850 reader did not enjoy, it has also become a different entity.

It is not necessary to consider here the changes in the nation's economy during this period; it is sufficient to note that such changes had a direct and important bearing on Canada's population rise. That population increase, itself a primary factor in determination of newspaper circulations, was from 5,592,299 in 1901 (including Newfoundland) to an estimated 17,048,000 on June 1, 1958. While the number of the nation's inhabitants was tripling, readership of French and English language dailies was making even greater gains, rising from an estimated 600,000 subscribers in 1901* to an estimated 3,936,834 in December 1957.† Thus, at the end of the period the subscription list was more than six times higher than at the beginning. The sharpness of the increase in newspaper circulation as compared with the increase of national population is indicated by the charts on the facing page. The second chart indicates the correspondence between daily newspaper readership and urban population. Canada's urban dwellers increased from 2,014,222 (including Newfoundland) in 1901 to 10,714,855 in 1956. This multiplication of the first-of-the-century figure by more than five times is closer to the proportional change in daily newspaper circulation than the over-all population increase. The interrelationship of the two is readily understandable, of course, when it is considered that dailies flourish in cities and towns, whereas weeklies usually serve the more sparsely populated communities.

As previously stated, the simultaneous growth of national, particularly urban, population might have had small effect on the nature of Canada's characteristic daily journal if these developments had been matched by a comparable rise in the number of newspapers. However, rather than a sustained rise in the number of dailies, an actual decrease took place; the 114 newspapers of 1901‡ rose to a peak of 138 in 1913, dropped to 87 in 1943 and 1945 and then increased to 99 in April 1958. The first chart gives a more complete picture of number fluctuations.

Remarkable improvements in newspaper-producing machinery made it possible for a smaller number of newspapers in 1958 to serve a readership six times as great as that of 1901. These improvements included such pre-1900 inventions as Mergenthaler's linotype and speedier and more complex presses, together with more modern innovations such as the teletype, typesetter, Scan-a-graver, Klischograph and telephoto, better colour processes, improved methods of paper storage, and higher quality inks and type faces. Such mechanical developments are described at pp. 891-892.

THE SINGLE NEWSPAPER CITY

The hand-in-hand growth in circulation and technology has had a vicious-circle quality. To serve a vastly enlarged readership, newspapers require elaborate and costly equipment; to pay for elaborate and costly equipment publishers must secure vastly enlarged readership. Under such conditions many an entrepreneur has found himself caught up in a situation in which he has had to gain all or nearly all the potential subscribers of his area if his enterprise is to continue. Thus in many communities there has no longer been room for two newspapers as there had been in the days of Mackenzie and Howe and rival journals have given no quarter in publishing battles that have ended only when all but one contestant has been driven from the field. Often the winner of a circulation

* Calculated from *McKim's Canadian Newspaper Directory, 1901*, and includes Newfoundland. Though many newspapers reported only approximate circulations, the total is reasonably accurate.

† *Ottawa Journal*, Dec. 31, 1957, quoting a Canadian Daily Newspaper Association compilation.

‡ From *McKim's Canadian Newspaper Directory for 1901*; English and French newspapers only. Morning and evening editions of the same newspaper are counted as one paper even where such editions are differently named.

fight has absorbed his opponents' publications, or at least acquired their assets of plant and subscription list. It is for this reason that so many modern Canadian newspapers have hyphenated or combination names such as *Star-Phoenix*, *l'Événement-Journal* or *Globe and Mail*.

This process has brought about a trend towards what Oswald Garrison Villard has called, in reference to the United States, "the disappearing daily". Today the one-newspaper city has become the rule, the multi-newspaper city the exception. In 1900, 66, or more than half of the country's daily journals, were established in 18 towns or cities boasting more than two newspapers; in 1958, only 14 of Canada's 99 general-interest dailies were published in the four cities of this category. In 1900, 17 towns issued two daily newspapers each, or a total of 34; in 1958, there were only nine such centres to account for 18 newspapers.* In 1958, Canada had 67 centres that were served by a single newspaper. Places which supported two or more daily newspapers in 1900 but which in 1958 had either one or none are: Nelson and Rossland in British Columbia; Belleville, Berlin (now Kitchener), Brantford, Brockville, Chatham, Galt, Guelph, Hamilton, Kingston, London, Orangeville, Peterborough, St. Catharines, St. Thomas, Stratford, Windsor and Woodstock in Ontario; St. Hyacinthe in Quebec; Fredericton and Saint John in New Brunswick; Amherst, Halifax and Yarmouth in Nova Scotia; and Charlottetown in Prince Edward Island. Calgary, Flin Flon, Sherbrooke and Chicoutimi are the only places which had either one or no daily in 1900 but which now have two.

The fact that the total number of dailies in Canada has risen from a low of 87 in 1945 to 99 in 1958 should not be regarded as evidence that the trend towards the one-newspaper centre is reversing itself. Real cause of the increase has been the settlement and growth of new areas. Over-all gains have taken place whenever a small community which had hitherto lacked a daily paper became populous enough for its weekly to convert to daily publication. Thus in 1957 gains were made when the *Summerside Journal-Pioneer*, *Prince George Citizen*, *Pembroke Observer*, *Penticton Herald* and the *Kelowna Courier* became dailies, but losses took place when the *Vancouver Herald*, *Montreal Herald* and *Charlottetown Patriot* ceased publication or continued only as a part of other newspapers. The *Montreal La Patrie* changed from a daily to a week-end paper. The *Kitimat Northern Sentinel* became a daily for a short time but reverted to less frequent publication before the year was over.

LARGER NEWSPAPERS

With fewer dailies serving more readers and with small multi-newspaper towns becoming large single-newspaper cities, there has naturally been a marked increase in the circulation of individual news-organs. Whereas at the end of the nineteenth century 66,000 for *La Presse* and 50,000 for the *Montreal Star* were the highest figures in the daily newspaper field, the *Toronto Star* established the all-time Canadian record with 422,938 subscribers in 1951 as attested by the Audit Bureau of Circulation audit of Sept. 30 of that year. Today's leaders (as shown by *Canadian Advertising* for November-December 1957, listing total net paid circulations excluding bulk) are the *Toronto Star* (397,660), *Toronto Telegram* (268,343), *Toronto Globe and Mail* (247,107), and *Montreal's La Presse* (229,968).

The size of the twentieth century daily is not indicated by circulation increases alone. The daily newspapers which have survived fifty years of intense competition are of necessity 'big business' operations, sharply different from the enterprises of pioneer press days. The modern metropolitan journal requires vast amounts of capital. Thus the late George McCullagh paid \$3,610,000 for the *Toronto Telegram* in 1948 and the reported selling price of the *Globe and Mail* when Howard Webster bought it in 1955 was more than

* This modest latter total includes two cities in which the independence of their dailies from each other is not, by any means, complete. In *Victoria* the *Times* and *Colonist* are owned by G. Max Bell and they share the same business and mechanical staff and mechanical equipment, but editorial staffs are distinct and separate, and the newspapers are quite different from each other in appearance and editorial content. Also in British Columbia, the *Sun* and *Province* are published by two companies which have formed a partnership for Vancouver but in other respects the two publications are quite distinctive.

\$10,000,000. The syndicate that purchased the *Toronto Star* to fulfill the terms of the Charitable Gifts Act had to raise an amount in excess of \$25,000,000. Some idea of the increase in newspaper magnitude which has taken place in the past half-century may also be gathered from the fact that the Dec. 24, 1956, issue of the *Vancouver Sun* printed a Christmas greeting from 814 named "folks at the *Sun*", exclusive of 3,493 "carrier salesmen, sub-managers, newsboys and wholesale distributors". This listing was in contrast to the 86 employees who produced three *Vancouver* newspapers in 1892.

CENTRALIZATION OF CONTROL

The trend toward bigness and an ever-increasing costliness of newspaper production has lent itself to a growing centralization of newspaper ownership in Canada. In 1930 99 publishers ran 116 dailies whereas in 1953 the 89 dailies in operation were controlled by 57 publishers, 11 of whom controlled about 42 or nearly half of Canada's daily newspapers.

The principal groups operating in 1958 were the Southam, the Sifton and the Thomson. Papers of the Southam family are the *Hamilton Spectator*, *Ottawa Citizen*, *Winnipeg Tribune*, *Medicine Hat Daily News*, *Calgary Herald*, *Edmonton Journal*, *Vancouver Province*, and *North Bay Nugget*. The Sifton organization, although control has been somewhat decentralized recently, owns the *Winnipeg Free Press*, *Regina Leader-Post*, and *Saskatoon Star-Phoenix*. Roy W. Thomson has been adding constantly to his properties, so that any listing of his newspaper holdings is soon out of date. In June 1958, the following Canadian dailies were members of the Thomson group: *Kamloops Daily Sentinel*, *Kelowna Courier*, *Nanaimo Free Press*, *Penticton Herald*, *Moose Jaw Times-Herald*, *Prince Albert Herald*, *Chatham News*, *Galt Reporter*, *Guelph Mercury*, *Kirkland Lake Northern Daily News*, *Orillia Packet and Times*, *Oshawa Times-Gazette*, *Pembroke Observer*, *Port Arthur News-Chronicle*, *Sarnia Observer*, *Sudbury Star*, *Timmins Press*, *Welland-Port Colborne Tribune*, *Woodstock-Ingersoll Sentinel-Review*, *Quebec Chronicle-Telegraph*, and *Charlottetown Guardian and Patriot*. Thomson also owns papers in Florida and the United Kingdom.

The Canadian dailies in these three groups had in 1958 a daily combined circulation of about 950,000, or about 25 p.c. of the combined daily newspaper circulation of Canada. Among members of the three newspaper organizations there has been a disposition to avoid the word 'chain'. They insist, quite properly, that they do not represent a single viewpoint and do not unite in concerted action in their coverage of public issues. Of the Southam group the *Ottawa Citizen* has been slightly left of Liberal at a time when many of its sister papers were giving a general but not doctrinaire support to the Conservative viewpoint. The *Edmonton Journal* has, in the past, engaged in heated controversy with the Social Credit government of Alberta, although for a long period the *Ottawa Citizen* regarded the views of that party with considerable favour. The three Sifton papers are all independent Liberal, but the *Winnipeg Free Press* has been one of the country's most outspoken critics of various federal Liberal governments, particularly on such issues as western agricultural policies and tariffs on farm machinery. In Saskatchewan, the *Regina Leader-Post* has been more inflexible in its opposition to the provincial C.C.F. government than has the *Saskatoon Star-Phoenix*. As for the Thomson papers, business considerations rather than ideological or political interests have connected the members of the organization.

THE DEPERSONALIZED NEWSPAPER

A feature of Canada's press mutation, particularly of the one-newspaper-city situation that is part of it, has to do with the tone and content of the modern daily. One frequently heard criticism of Canadian journalism is that the press does not reflect minority opinion. Since the average city has only one newspaper, so the argument goes, only one political or social or religious viewpoint will find newspaper expression in most communities. The defect is, in reality, of quite a different character. Because Canada's large daily newspaper must, to survive, have a mass circulation, it cannot afford to offend any appreciable segment of the population. It will not antagonize its readers by taking a doctrinaire,

forthright stand on contentious issues. Instead it will follow a 'public service' approach to policy, seeking to serve the whole community rather than any special section of it. The criticism now becomes not that the press is unfair in its treatment of the community's minorities, but rather that it is not outspoken enough, that it is too conciliatory in tone, that it aims at being inoffensive and innocuous when it should be giving strong leadership in matters of vital public concern. In this respect, there have been gains as well as losses, of course. Changing economic factors as well as the good example set by such journalists as Sir John Willison and Sam Kydd have taken the narrow bias and poisonous scurrility out of the newspapers. That change has been all to the good.

In some respects the monopoly of the one-newspaper city is less serious than it at first appears to be. While it is true that most Canadian centres have only one daily publishing within their confines, very often there are several circulating within their areas. In Eastern Canada, for example, many towns are served not only by their local papers but also by the *Toronto Globe and Mail*, *Montreal Gazette*, *Toronto Star*, *Toronto Telegram* and *Montreal Star*. The home-produced journal is usually supreme in its coverage of on-the-spot items, but it is not dominant by any means in its presentation of national and international news. Furthermore, the newscasts of local radio and television stations have worked against any easy and comfortable monopoly by individual dailies.

THE PUBLISHER AND THE ADVERTISER

As the business department of the newspaper has come more and more to dominate the daily newspaper, the businessman-publisher has tended to displace the proprietor-editor and printer-editor as the figure of most influence in Canadian journalism. Although John W. Dafoe, Henri Bourassa, John Willison, D. B. MacRae and E. Cora Hind are remembered for what they did in the editorial branch of journalism, and although George Ferguson, Grant Dexter, Bruce Hutchison, Gérard Filion and André Laurendeau are modern-day writers of power and prestige, Sir Clifford Sifton, Lord Atholstan, Joseph Atkinson Sr., the Southams, Trefflé Berthiaume, Rupert Davies, Roy Thomson, Howard Webster, John Bassett Sr., John Bassett Jr., and Don Cromie have been great powers in determining what the modern press of Canada has come to be.

A question often asked of the North American press is whether today's revenue-seeking publisher is not too susceptible to the pressures exerted on his newspaper by the advertisers he is sometimes too anxious to please. What has made the huge circulation gains of the twentieth century so valuable to the publisher is, of course, not increased subscriber revenue but rather greatly augmented advertising returns. Being so dependent on the advertising dollar, so it is widely claimed, the modern newspaper has become unduly sympathetic to the advertisers' wishes. Persons critical of contemporary Canadian journalism often assert that advertisers frequently determine what is printed and what is left out of the paper, and that they often decide a paper's policy on particular issues. There is little evidence that this charge is, in any large measure, true. For one thing the modern daily is itself a big business operation, unlikely to be greatly damaged by the boycott of a single advertiser. For another, it has services to offer the advertiser which are just as desirable to him as advertising income is to the newspaper's publisher. As William Allen White once pointed out in connection with the American situation, the press reflects big business, not because of any improper advertising pressure but because the modern publisher is himself a big businessman, sympathetic to the views and aspirations of his class.

TIMELINESS OF NEWS COVERAGE

The mechanical improvements in newspaper production and a considerable pooling of news-gathering resources which have helped to make the press of Canada a large-scale operation have also brought about an ever-growing timeliness of news coverage. Until at least 1907 there were no more than a dozen Canadian dailies that provided anything like an adequate presentation of the affairs of the entire nation, and they only through the efforts of a small number of over-worked special correspondents. The special cable service for Canada gained through formation of the Western Associated Press, and the

later establishment of Canadian Press and British United Press (now referred to also as United Press International) accelerated the speed-up. Today the teletype brings in news from distant places while it is still fresh enough to be included in a newspaper. The modern typesetter permits the inclusion of even more last-minute news than was previously possible; it frees members of the newspaper's mechanical staff to set up more local news items; it allows papers to build up a backlog of 'time copy' without imposing extra labour on the typesetters.

Two twentieth century developments, one somewhat unexpected, are related to the increasing timeliness of the press. One of these is the virtual disappearance of the newspaper 'extra', a disappearance that took place sometime between the two world wars. It is somewhat surprising that this 'most-up-to-date' newspaper edition should be discontinued at the very time the press was becoming increasingly up-to-the-minute. In this case, however, the radio proved powerful enough to reverse a trend. Since the broadcasting agencies could disseminate news more quickly than even the fastest newspapers, the novelty value of the extra was lost.

The second development was the shift from the morning to the evening dailies as the most numerous and largest newspapers. This change, more marked in Central and Western Canada than in the Maritimes, occurred particularly during World War I when nearly all of the major news stories of the European struggle 'broke' in time for evening rather than morning editions. This shift has continued because Canada's working populace does not find as much time for newspaper reading in the morning as it does in the evening. The result is that today many cities such as Ottawa, whose *Journal* and *Citizen* both discontinued their morning editions in recent times, have only afternoon papers. In centres such as Calgary, Montreal and Toronto which have both kinds of journals, the afternoon publications almost invariably have larger circulations than the morning papers. In the rare instances where the reverse is true, the exception is often accounted for by special circumstances. In Victoria, for example, the dominance of the morning paper is probably accounted for in part by the fact that a large proportion of the population consists of retired persons who have morning leisure for newspaper reading.

NEWSPAPER CONTENT AND TONE

It would be quite impossible even to list the great stories that have found place in Canadian newspapers during the twentieth century. In that period the most obvious new ingredient was the international story, brought to the Canadian readers more speedily, in fuller detail, and from more remote places than previously. Long, continuing events like the Russo-Japanese war, the Japanese adventure in Manchuria, League of Nations deliberations, the Italian invasion of Ethiopia, the Spanish Civil War, the Suez Crisis, and the Russian suppression of the Hungarian revolt received continuing attention and gained front-page banners on event-filled days. First place in both space and prominence was claimed by accounts of national disasters, of personal tragedy, and heroic individual exploits: the San Francisco Earthquake, the Halifax Explosion, the Eruption of Mount Pelee in Martinique, the Messina Earthquake, the Sinkings of the Titanic and the Lusitania, the Moose River Mine Disaster, the Winnipeg Flood, the Assassination of McKinley, the Death of Roosevelt, the Murder of Dolfuss, Lindbergh's Transatlantic Flight, the Perfection of Salk Vaccine, the Dropping of the First Atom Bomb, and the Launching of Sputnik I are but a few of countless possible examples. The long full story of the First and Second World Wars and the Korean War was given a completeness of treatment that depended on the magnitude of the tragic struggles and also on Canada's deep involvement. The press told the story of Canada's growing autonomy as fully as it had described the evolution of Responsible Government during the Second Press Period, and the achievement of Confederation during the Third. However, the continuity of the self-government theme tended to be obscured by the episodic nature of the innumerable events that were part of the long-term evolutionary process. Additionally, the myriad-detailed accounts of a multitude of other unrelated happenings had the effect of burying the story of the purely Canadian development. Anyone who wishes to learn that story from Canadian

dailies must cull out the thorough, detailed but usually scattered news reports of such matters as the Alaska boundary dispute, the pelagic sealing award, the Dundonald incident and its consequences, Canada's role in various Imperial Conferences, the appointment of the first Canadian Ambassador to Washington, the pronouncements of John W. Dafoe and John S. Ewart on Dominion status, the Balfour Declaration and the Statute of Westminster, the changing power of the Canadian nation to sign military and trade treaties, Canada's declarations of war in 1914 and 1939, the abolition of appeal to the Privy Council, and Canada's growing influence in the United Nations, particularly during the Suez crisis, and in United Nations agencies.

Entertainment features have come to occupy an increasingly important part in the press of Canada. Papers which in 1900 had been content to publish a single page of antiquated jokes and a few one-panel cartoons, began to add, during the first few years of the century, such American syndicated full-page and half-page comics as Buster Brown, Little Nemo, the Rarebit Fiend, the Katzenjammer Kids, Peck's Bad Boy and Happy Hooligan. Somewhat later Tillie the Toiler, Andy Gump, Barney Google, Cap Stubbs, Lester de Pester, and the Nebbs appeared. More recent favorites are Li'l Abner, Blondie, Pogo and Peanuts. Today's comics usually include a page or two of black and white strips on week days and an entire colour section of full-page and half-page comics on Saturdays.

Other modern non-news components of the daily press are cross-word puzzles, bridge and chess columns, advice to the lovelorn features, personal advice columns, Bible readings, astrology departments, cooking, homemaking, sewing, and children's pages. Most papers furnish radio and television program listings. Films are well advertised, and drama, art, ballet and book criticism find a place, usually at week-ends. Syndicated columnists, most of them American, are prominent. Fiction and poetry contributions are less numerous than they were at an earlier time, particularly in week-day issues. It is difficult to foretell the effect of competition from television on newspapers, but it may be that the newer medium will cause newspapers to lessen their entertainment role and concentrate more fully on the presentation of news.

Advertising forms a major part of modern newspaper content. Successful dailies devote from 40 p.c. to 60 p.c. of their content to advertising, classified or unclassified. The classified sections, which are extremely large in most metropolitan dailies, have genuine news value and serve readers in the same way as does an open marketplace with its offerings of goods and services. To perhaps a lesser extent this is also true of unclassified advertisements, which are usually notable for their persuasiveness and eye-appeal. With some justice critics attack such advertising on the grounds that it is often extravagant and misleading. Certainly some copywriters do exaggerate the effectiveness of the products they extol, but today the fault is more one of degree than kind and the modern reader who has learned to make downward adjustments in evaluating such claims is not too often deceived. Indeed, modern advertising is much more praiseworthy than a pre-1900 counterpart that was often irresponsible and even criminal in its bold claims on behalf of harmful and dangerous nostrums, and in its cruel promises to cure cancer, tuberculosis and other dread diseases.

The tone of the modern newspaper is suitable to its omnibus content. Today's press is much freer of the libellous, *sub-judice* and contempt-of-court matter common earlier. No longer do newspapers refer to a person arrested in connection with a killing as "the murderer" as they did at the beginning of the century. In the general-interest paper, at least, wholesale reporting of obscure suicides has been discontinued. Present newspapers do not often describe death by fire as "cremation" as did countless head-writers of fifty years ago. Such minutely detailed and gory accounts as that of the Chicago theatre disaster of Dec. 31, 1903, which appeared in the daily general-circulation newspaper of that period are now to be found only in the crime 'pulp' or the tabloid scandal sheets of Toronto and Montreal.

Today Canadian journalists aim at objectivity in their news stories, reserving opinion and comment for the editorial section of their publications. Modern thinking, however, is that a mere dispassionate recital of the bare details of an event is no guarantee of such

objectivity, since the selection of the facts to be reported or omitted can of itself make a news report highly subjective. The plea is therefore properly made for reporting the background details of an incident, for furnishing an account that is interpretive. However, the shortcomings of the news report which such interpretation aims to correct must not be made the excuse for writing opinion disguised as fact. The worth of C. P. Scott's dictum is still unchallenged: comment is free but facts are sacred.

Modern editorials differ considerably from the editor's effusions of an earlier day. Today's journalist realizes that editorial preachments are not so effective as they once were. Life is now so complex that social, political, scientific and other matters that affect existence defy easy analysis. They do not lend themselves to old-fashioned clarion calls to a clear-cut course of action which the old-time editor was so fond of issuing. The editor's function is no longer to say, "Do this; do that", but rather to say, "Here are the facts and issues of the matter, as fully and dispassionately as the considerable resources of our newspaper enable us to present them; make up your own mind about this problem". Whereas the early editorial writer claimed infallibility, the modern editorial writer aims at omniscience.

FORMAT AND MAKE-UP

The physical appearance of the newspaper page has continued to change. An even greater departmentalization of content has proved highly convenient to the busy reader and the fewer label heads used now serve normally to mark regular features. Hanging indents, overlines, inverted pyramids and related arrangements give variety of make-up. The lengthy series of sub-heads which once followed a 'line' story head to provide a virtually complete synopsis of a news event has been replaced by a single, descriptive 'deck'. Full-width, 72-point and larger streamers have become much more common than they were in 1900, but most recently there has been a tendency to discriminate between more and less important news stories by reserving the page-width 'line' for more consequential news events. Editors today favour the inverted pyramid with its synoptic 'lead' for the news story. There is some opposition to this artificial writing arrangement but no one has been able to suggest how a chronological news account is to be adapted to the conditions of modern newspaper production, nor, for example, how such natural-order treatment is to avoid providing the *New Yorker* with even more startling examples for its "Most Fascinating Story of the Week" section.

Newspaper size has increased during the twentieth century. Journals which regularly contained 16 or 20 pages an issue now have 32, 36 or 40 pages, and for special occasions may be much larger. Several metropolitan dailies such as the *Toronto Star*, *Toronto Telegram*, *Montreal Star* and *Vancouver Sun* are regularly larger. Page width has varied over the period. Papers not of tabloid (five column) size were, at the start of the century, most commonly of seven columns. More recently these have added an extra column. Within the past five years increased production costs (particularly newsprint costs) have caused certain newspapers to make changes; for instance the *Toronto dailies*, in order to increase the amount of printed matter per page, have gone to nine columns, using narrower spaces between columns but not adopting wider pages. An incidental advantage is that an odd number of columns permits greater variety of make-up. News-organs such as the *Ottawa Citizen*, *Ottawa Journal* and *Montreal Gazette* have achieved savings by reducing page width while still retaining the eight-column format. Papers like the *Toronto Star* and *Ottawa Journal* have coupled their innovations with the use of a new body type which is more legible and in which the ink does not clog so readily. The *Ottawa Citizen's* reduction of column width from 13.5-pica columns to 11-pica columns over the years typifies a change that has taken place in many newspapers. The *Ottawa Citizen* has achieved contraction by shrinking the stereo mat rather than by shortening the linotype 'slug', so that the newspaper is still able to make use of standard-width C.P. typesetter material.

MECHANICAL INNOVATIONS

Not the least of twentieth century innovations used in the mechanical production of the newspaper has been the teletype, introduced into Canadian newspapers during the 1920's. This invention speeded up the dissemination of news, made possible the pooling

of news-gathering facilities and the sharing of costs, and contributed to a considerable increase in the national and international content of Canada's news pages. After 1950 the teletypesetter came into general use in Canadian dailies. This machine is a device which harnesses a teletype to a linotype. On a narrow punched paper tape as well as on a typed page it feeds out stories to member papers of press associations. The tape can be fed to a teletypesetter, which operates the linotype automatically, in much the same way as a player-piano roll works the keys of a piano.

Improvements in typesetting have been matched by faster and better methods of producing newspaper pictures. Pre-1900 devices for making mats and cuts have been steadily perfected so that the pictorial content of the 1958 newspaper is much superior to that of its first-of-the-century counterpart. In addition, faster photo-engraving has been provided by the Scan-a-graver and Klischograph, first introduced in the 1950's. The Scan-a-graver is a device that 'scans' a photographic print and, with the aid of an electric eye as synchronizer, reproduces it as a plastic engraving. This process is much cheaper than more conventional methods and permits newspapers to do their own engraving, thereby eliminating the delay caused by having to send pictures out to private engravers. Many newspapers, however, still favour more conventional photo-engraving methods. Scan-a-gravers and scan-a-sizers, which reduce or enlarge the size of the original illustration, may not be bought outright but may be leased only. The Klischograph, an on-the-spot engraver quite similar in principle to the Scan-a-graver, can be purchased outright; it is probably more popular in the country weekly than in the metropolitan daily field.

Canadian Press began a telephoto service for Canadian dailies in the 1950's, allowing them to present pictures of news events very soon after they happened. Telephoto permits photographs to be transmitted by wire and reprinted thousands of miles away. World coverage for Canadian newspapers is furnished through a link-up with international press agencies. Recent advances permit daily newspapers to carry colour pictures of good quality with little time delay. An improved four-colour process achieves subtle and complex effects not previously possible and large multi-coloured advertisements have become particularly attractive. Very often daily papers which once saved their bright hues for Saturday comics and week-end supplements now live on single pages on week-days by including illustrations in the more exotic tints and shades. Such use is still somewhat limited, however, by the costliness of the process.

COSTS AND PRICES

A sharp rise in costs to the newspaper publisher which has been particularly marked during the postwar period has been accompanied by a general rise in the price of individual copies to the reader. Newsprint has become more expensive and many journals are finding that subscription revenue does no more than pay for newsprint. Two or three years ago such papers as *Le Devoir* in Eastern Canada and the *Times*, *Colonist*, *Sun* and *Province* in British Columbia raised the price of individual copies from the five cents which had so long been a standard price, and the *Toronto Star*, *Telegram*, *Globe and Mail*, and scores of other dailies have since followed suit. Current prices range from seven to ten cents per copy. A factor contributing to price increase has been the need to make up for revenue losses resulting from a small but important drop in advertising lineage, ascribable in part to competition from television.

THE PRESS AGENCIES

Although Canada's size has so far prevented the establishment of any truly national dailies such as the London *Times* and *Manchester Guardian* for England, the journalism climate provided by enlarged newspapers, a centralized control and a considerable expansion in news coverage has been eminently suited to the growth of nation-wide news-gathering services. In one of them there has been a highly successful pooling of resources.

Canada has two major news-gathering agencies: the Canadian Press and British United Press. The Canadian Press, which had its origin in the Western Associated Press, was established in 1917 as the Canadian Press Limited and gained its more modern structure

in 1923. From 1917 on, CP had accepted an annual subsidy of \$50,000 from the Federal Government to pay the cost of bridging three geographical gaps in its wire services, but in 1925, fearful that its independence was being threatened by the acceptance of such aid, it resolved never again to take such assistance from any source. The CP is a co-operative organization of which 100* daily newspapers are members. Its head office is in Toronto, and it has bureaus in Halifax, Quebec City, Montreal, Ottawa, Winnipeg, Edmonton, Vancouver, New York City, and London, England. It keeps staff men in St. John's, Nfld., Saint John, N.B., London and Windsor, Ont., Regina, Sask., Calgary, Alta., Victoria, B.C., and Washington, D.C., U.S.A. Its major exchange services are with the Associated Press, the United States co-operative, and with Reuters, the British agency. For a long time, CP provided service to members in English only but in 1951 a French-language service was introduced. CP serves, in addition to the Canadian Broadcasting Corporation, 198 privately owned broadcasting stations, 162 radio and 36 television stations. Many weekly newspapers also use CP material.

The British United Press, the British Commonwealth branch of the American organization, the United Press, was begun in 1922, largely at the instigation of Charles Crandall, managing editor of the *Montreal Star*. Both the parent company and its subsidiary are private agencies; that is, they depend on the writing and reporting of their own reporters for all copy. The principal area of operations of BUP has been Canada, although there is a branch office in London, England, and correspondents are situated in other parts of the world. Until May 1958, the board of directors of BUP consisted of five men, three from BUP and two from UP. In that month United Press and International News Service in the United States merged to form United Press International. To the Canadian company this has meant only a change in the credit on its news reports from BUP to UPI. British United Press has remained the company's official name. At the time of the union the board of directors of the Canadian body was enlarged to seven men: BUP's managing director, BUP's assistant general manager, the chief of BUP's London bureau, the president and three vice-presidents of UPI. Head Office for Canada is in Montreal, while bureaus or correspondents are located in Halifax, N.S., Quebec City, Que., Toronto, Ottawa and Windsor, Ont., Winnipeg, Man., Regina, Sask., Calgary and Edmonton, Alta., and Vancouver and Victoria, B.C. In 1958, BUP had 183 subscribers taking full or partial services; 56 of them were private broadcasting stations.

FREEDOM OF THE PRESS

Early in the twentieth century the body of libel legislation, which had had its beginning in Victorian days, was completed. This achievement came about when Saskatchewan and Alberta (which had been served in the matter by c. 30 of the Consolidated Ordinances of 1898 while the two provinces were part of the North-West Territories) put their own libel and slander Acts on the statute books. The Saskatchewan enactment was assented to in 1909 and that of Alberta in 1913. These two Acts and previous laws passed by the Federal Government and by the other provinces went a long way to ensure a free and responsible press. Even so, such legislation can never be a completely effective guarantor of enduring press liberty. There has been in Canada during the modern journalism period recurring evidence that freedom is always in danger, that Goethe's dictum is true: "That which thy fathers have bequeathed thee, win it anew if thou wouldst possess it".

One demonstration of the impermanence of a guaranteed newspaper liberty was provided by the Alberta Press Act struggle in the late 1930's. Soon after Premier William Aberhart came into power in the oil province in 1935 he clashed with the press. Stung by newspaper criticism of his monetary and other policies, he barred certain opposition reporters from his press conferences, engaged in bitter controversy with J. J. Zubick and the anti-Social Credit *Rebel*, and argued with J. F. B. Livesay and the Canadian Press. Climax of the worsening situation came in 1937 when Aberhart introduced "An Act to Ensure the Publication of Accurate News and Information". Its principal provisions

* Some newspapers elsewhere considered as separate editions of the same newspaper are, in the CP computation, considered separate newspapers.

were: a requirement of papers to publish any statement furnished by the Social Credit Board "which has for its object the correction or amplification of any statement relating to any policy or activity of the Government of the province published by that paper within the next preceding 31 days"; and a requirement to name within 24 hours sources of any statement made in that paper within the preceding 60 days of the making of an order so to do, as well as to name the writer of any article, editorial, or news item appearing during the same period. Fines of \$500 were provided for failure to comply with these conditions. The Act would also have empowered the Alberta Government to prohibit publication of newspapers contravening the provisions mentioned "for a definite time, or until further order", and to prohibit publication in any newspaper of the writing of "any person specified in the order". Contraventions of Orders in Council made under these provisions could bring a fine of \$1,000.

Although Premier Aberhart had characterized the Act as a device "to restore freedom (of the press) from the clutches of financial, political and commercial organizations", Canadian journalists considered the legislation to have a much more hostile purpose. The press of Canada united under the late John M. Imrie of the *Edmonton Journal* to fight against the proposed measure. With Imrie as chairman, a committee was formed to oppose the Bill, and the late J. L. Ralston, K.C., was hired as legal counsel for the Alberta publishers. In Canada at large the Canadian Press and Canadian Daily Newspaper Association joined forces for the impending battle.

When Alberta's Lieutenant-Governor refused to give assent to the Press Bill, it became matter for court debate. In March 1938, the Supreme Court of Canada declared the Act *ultra vires* (beyond the power) of the Alberta Government, and in July of the same year it met final defeat when the judicial committee of the Privy Council refused to review it on the grounds that it was ancillary to the broader Social Credit legislation which the British body had previously ruled *ultra vires*. For the latter reason it is probably the verdict of the Canadian court that is significant. In handing down his decision, Chief Justice Lyman Poore Duff gave it as his opinion that "it is axiomatic that the practice of (the) right of free public discussion of public affairs, notwithstanding its incidental mischief, is the breath of life of parliamentary institutions".

The outcome was a distinct victory for newspaper liberty in Canada. For his part in the fight Imrie received, on behalf of the *Edmonton Journal*, a bronze plaque, the first Pulitzer award to go to a newspaper outside the United States. Five other dailies and 90 weekly newspapers of the province were given engraved certificates for their role in the victory.

A second Canadian controversy involving press freedom had its origin in an article entitled "Babies For Export". This appeared in the *New Liberty* magazine of Dec. 27, 1947. It described adoptions by outsiders of babies from the Province of Alberta. Publication of the article led to charges of "conspiring to publish a defamatory libel". These were laid against Jack Kent Cooke publisher of the magazine, the late Harold Dingman who had written the article, and Dr. Charlotte Whitton who had prepared the report on which the article was based.

The indignation aroused by the case arose from the fact that the defendants, who were all Ontario residents, were forced to travel 2,000 miles to an Edmonton courtroom to face trial. The Canadian Daily Newspaper Association, the Canadian Press, newspapers throughout Canada, and many others vigorously protested the Alberta action on the grounds that it was an attempt to avoid the plain meaning of Sect. 888 of the Criminal Code, which expressly stated that the place of trial in criminal prosecutions for libel against the publisher of a newspaper shall be within the province in which he resides or in which the newspaper is published. It was contended that, by making the charge one of 'conspiracy to publish' rather than one of 'libel' the attorney-general's department was destroying the protection for publishers which the Section was plainly intended to provide. Critics of the Alberta action saw in existing legislation a loop-hole in laws designed to guard press freedom.

The trial itself did nothing to remove the danger that the case had exposed. One by one the charges against the three defendants were dropped without the necessity of court decision. Finally, only one charge remained, that of "counselling the publication of a defamatory libel", and that against Cooke alone. The court acquitted the *New Liberty* publisher of this charge in April 1948, to end the case. The weakness in the law itself was removed on June 30 of the same year when a federal Bill to amend the Criminal Code received Royal Assent. The amendment required that a person charged with defamatory libel or *conspiracy to publish* defamatory libel must be dealt with—indicted, tried and punished—in the province where he lives or in which the newspaper is published.

A longer-lasting threat to press freedom was to be found in Quebec's Padlock Law. Its true origin was the Winnipeg Strike of 1919. That stormy event led to the passage of Sect. 98 of the Criminal Code, an enactment carrying stiff penalties against persons convicted of unlawful association, sedition and the publishing of seditious material. Strong efforts to repeal the freedom-restricting law were carried on from 1921 until they were successful in 1936. Mr. Duplessis, elected Premier of Quebec in that year, took the view that the Criminal Code amendment left the country dangerously exposed to Communist propaganda and he introduced a piece of legislation designed to take the place of Sect. 98. This was "An Act to Protect the Province Against Communist Propaganda"—the so-called Padlock Law. The Act empowered the Attorney-General of the province to close for twelve months any establishment suspected of harbouring Communist activities. It also made unlawful the printing, publishing or distributing in the province of "any newspaper, periodical, pamphlet, circular, document, or writing whatsoever propagating or tending to propagate communism or bolshevism". Penalty for violating the latter regulation was "an imprisonment of not less than three months, in addition to the costs of prosecution, and in default of payment of such costs, . . . an additional imprisonment of one month".

Persons concerned with freedom of the individual protested vigorously against the Padlock Law. They characterized it as itself a denial of law. They pointed out that, without defining what Communism or Bolshevism is, it permitted the State to declare persons to be Communists or Bolsheviks, it gave the accused no chance to refute such charges, and it did not require the courts to make a case against those so charged. The contention was that under such conditions the Attorney-General became "policeman, prosecutor, judge, sheriff and hangman".

Despite such protests, Mr. Duplessis invoked the Padlock Law on several occasions. Up until the Union Nationale Government's defeat in 1939 the law was applied at least thirteen times. After Mr. Duplessis' return to power in 1944, it was again enforced, as in February 1948 when not only *Le Combat*, an admittedly labour paper, was closed but also *Le Progrès de Villeray*, the non-Communist newspaper in whose plant *Le Combat* had been printed, and in January 1950 when the Attorney-General padlocked the premises occupied by the Jewish People's Order of Montreal.

What made removal of the law from the statute books difficult was the fact that victims of the Padlock Law could not sue the Quebec Government without its *fiat* or consent. The Quebec Government refused to grant *fiats*. However, as a result of an unusual circumstance, the Padlock Law did come before the law courts. On Dec. 29, 1947, Freda Elbling rented her Montreal Park Avenue apartment to Max Bailey. The lease carried the right to sublet. Accordingly, on Dec. 23, 1948, Bailey sublet the Elbling premises to John Switzman who was, by his own admission, a Communist at that time. On Jan. 27, 1949, the Attorney-General of Quebec ordered the apartment padlocked. This was done and the papers therein were seized. Immediately Freda Elbling sought in court to annul the lease and recover damages from Switzman. Switzman defended himself on the grounds that the Padlock Law was *ultra vires* of the province, or unconstitutional, and that he should never have been molested. In this way the Padlock Law was taken into court without any *fiat* being needed.

When, in 1950, the trial division of the Queen's Bench in Quebec, in a case in which the provincial government intervened in support of the statute, found against Switzman, he appealed the judgment to the Court of Appeal in Quebec. There, in 1954, the verdict of the lower court was upheld in a four-to-one vote. Further appeal was delayed until supporters of Switzman could raise enough money to take the case to the Supreme Court of Canada. This was done late in 1956. As the case was argued, the main contention of the respondent (Quebec Government) was that Padlock Law involved property and civil rights, matters allocated to the provincial jurisdiction by Sect. 92 of the British North America Act. Legal counsel for the appellant (Switzman) maintained that the Law dealt with civil liberties, which were quite a different matter. Professor Frank L. Scott, of McGill University, one of the lawyers who represented Switzman, maintained that the Padlock Law interfered with the Dominion Elections Act, that it created a new crime, thereby encroaching on Parliament's jurisdiction over criminal law, that it gave the Attorney-General of Quebec judicial powers, and that it interfered with freedom of speech, press and assembly.

On Mar. 8, 1957, the Supreme Court of Canada, by an eight-to-one vote, ruled that the Padlock Law was beyond the legislative powers of the Province of Quebec. In supporting the majority decision Mr. Justice I. C. Rand said:—

"... Canadian government is in substance the will of the majority expressed directly or indirectly through popular assemblies. This means ultimately government by the free public opinion of an open society, the effectiveness of which, as events have not infrequently demonstrated, is undoubted.

"But public opinion, in order to meet such a responsibility, demands the condition of a virtually unobstructed access to and diffusion of ideas. Parliamentary government postulates a capacity in men, acting freely and under self-restraints, to govern themselves; and that advance is best served in the degree achieved of individual liberations from subjective as well as objective shackles. Under that Government, the freedom of discussion in Canada, as a subject-matter of legislation, has a unity of interest and significance extending equally to every part of the Dominion...

"This constitutional fact is the political expression of the primary condition of social life, thought and its communication by language. Liberty in this is little less vital to man's mind and spirit than breathing is to his physical existence. As such an inherence in the individual it is embodied in his status of citizenship."

Legally, Quebec's Attorney-General, Mr. Duplessis, had the right to appeal against the Canadian Supreme Court decision to the judicial committee of the Privy Council in England. He would be able to do this because the Switzman-Elbling case had its beginning before Dec. 9, 1949, the date when the Supreme Court of Canada was made the final court of appeal for Canadian cases. Mr. Duplessis announced that he would not take this step. It seems, therefore, that the threat to press freedom once posed by the Padlock Law is now ended.

CURRENT DAILIES

Any comprehensive history of Canadian journalism must take into account individual newspapers. The value of the following list of dailies being currently published is to indicate which dailies have proved strong enough to survive twentieth-century competition. This list, prepared as at the end of 1957 and the beginning of 1958, is not, of course, likely to remain long unchanged: new dailies are founded from time to time and old ones die or merge with other papers. The founding year is given only for those papers established during the twentieth century; it is the year the news-organ began to publish rather than the year it was converted from less frequent to daily publication. The first name following such newer papers is usually that of the founder of the journal. Other persons included are journalists who gave important service on the newspaper. Hundreds of eminent journalists are, of course, necessarily omitted.

Some professional organizations in which those connected with the daily press participate are the Canadian Daily Newspaper Publishers' Association, Canadian Managing Editors' Conference, and the Ontario Provincial Dailies Association.

THE WEEKLY PRESS

Although modern social and publishing conditions have made the daily newspaper pre-eminent in Canadian journalism, weeklies continue to hold an important place. Their stronghold is the rural, village and small-town area. They are essentially community journals which concentrate attention on local happenings, leaving the presentation of national and international news, for the most part, to their big city contemporaries. Such country newspapers are produced by hard-working and versatile journalists whose occupational ancestors were the printer-editors of an earlier press age.

Reliable statistics for Canada's weekly newspapers are extremely difficult to obtain, but in 1954 there were nearly 1,000 weeklies with a total circulation of about 2,500,000. These numbers do not include week-end newspapers, which have recently made large circulation gains, but do include some advertising 'throwaways' and special-interest papers such as *Canadian High News*, not usually considered part of the general-appeal weekly press.

In 1957 there were 525 newspapers belonging to the Canadian Weekly Newspapers Association, a national body with headquarters in Toronto. The CWNA had its origin in the Canadian Press Association, setting up its own section within that body in 1908 and forming its own separate organization in 1919. It received legal incorporation in July 1944. Weekly newspapers in each province maintain provincial organizations as divisions of the parent association. The regional groups are autonomous. It is possible for a Canadian weekly to be a member of either the federal or provincial organizations without being a member of both.

NATIONAL WEEK-END NEWSPAPERS

National week-end newspapers in Canada do not enjoy the prominence of their American counterparts. *Canadian Advertising* (Nov.-Dec. 1957) lists only 22 such publications and few of these have both national and family appeal. Included in even this small

number of newspapers are such special-interest offerings as the *Canadian Register*, such provincial-appeal papers as the *Newfoundland Sunday Herald*, and such non-family tabloids as *Flash* and *Allo Police*. The most successful week-end newspapers are *Weekend*, a tabloid-size insert which, in addition to being issued separately as the *Standard*, appeared in the Saturday edition of 27 Canadian dailies in early 1958, and the *Star Weekly* which has news-stand, supermarket and mail distribution. On Mar. 31, 1957, the three-month average circulation of *Weekend* was reported to be 1,491,000 and the *Star Weekly* had a circulation of 946,000. The *Weekly Globe and Mail* has about a quarter of a million buyers. The *Hebdo-Revue* is a French-language supplement inserted in several Canadian newspapers; it has also provided a magazine section for one United States French-language newspaper, *L'Action*, of Manchester, N.H. Publications described as week-end newspapers, because of their pictorial and feature-article content, resemble magazines more closely than they do daily and weekly newspapers. No week-end newspapers are published on Sundays, although the daily, the *Victoria Colonist*, has a Sunday morning instead of a Monday morning edition. In 1957 the *Toronto Telegram* began to publish a week-end paper on Sundays but discontinued it after a few months.

FARM PRESS

There are about 60 newspapers and magazines in English and French to serve Canada's large farm population. Many of these have enjoyed a longevity unknown to publications with a less sustained and widespread appeal. Among the most prominent (together with founding dates) are the following: *Family Herald* (1870); *Farm and Ranch Review* (1905); *Farmer's Advocate and Canadian Countryman* (1866); *Farmer's Magazine* (1909); *The Country Guide* (1882); *Free Press Weekly Prairie Farmer* (1872); *The Western Producer* (1923); *Le Bulletin des Agriculteurs* (1918); *La Ferme* (1939); *La Terre de Chez Nous* (1929).

SPECIAL-INTEREST PAPERS

In addition to the above-mentioned publications and to magazines, there are published in Canada a number of papers serving other special interests. About a dozen labour papers claim circulation of approximately a quarter of a million copies, the largest being *Le Travail* (1925), *The B. C. Lumber Worker*, *Canadian Transport* (1908), and *The Guardian* (1952). *Canadian Advertising* lists five political publications, which together have about 50,000 subscribers. The *C.C.F. News* (1936), *C.C.F. News (Ontario)*, *The Conservative Clarion* (1956), *The Commonwealth*, and *Canadian Tribune*. Thirty-one religious publications claim about a million subscribers, the circulation leaders being *Les Annales de Notre-Dame du Cap* (1892), *The United Church Observer* (1829), *The Presbyterian Record* (1876), *Messenger Canadien* (1892), *The Missionary Monthly* (1926), *The Living Message* (1922), and *The Canadian Baptist* (1854).

MAGAZINES

There has recently grown up in Canada a flourishing magazine press; in 1958 the combined circulation of the nation's magazines exceeded 11,000,000. Associations concerned with magazine production include the Canadian Industrial Editors' Association and Periodical Press Association with its affiliates, the Agricultural Press Association of Canada, Business Newspapers' Association of Canada, Magazine Publishers' Association of Canada and Magazine Advertising Bureau of Canada.

Consumer or Popular Magazines.—The existence of the Canadian-produced consumer or popular magazine is often precarious. Many publishing difficulties come from the omnipresent competition from the United States because American consumer or popular publications appeal to the readers in Canada just as strongly as they do to American subscribers. A common language, a similarity of customs and tastes and a tariff-free border so far as publications are concerned make impossible the kind of protection that other nations enjoy. The result is that, as the Periodical Press Association pointed out to the Massey Commission,* "Canada . . . is the only country of any size in the world

* Vincent Massey et al, *Report: Royal Commission on National Development in the Arts, Letters and Sciences*, Queen's Printer, Ottawa, 1951, p. 64.

whose people read more foreign periodicals than they do periodicals published in their own land, local newspapers excluded". What makes it difficult for Canadian magazines to compete with the American product is that the United States publishers are able to regard the Canadian market as an 'extra' market, a field to be exploited with little additional cost after a huge domestic market has paid the heavy basic expenses of publication. Besides this, the inclusion of a Canadian section in the American magazines has made competition from south of the border even more intense.

Such American competition may be one of the reasons that only a few Canadian magazines such as *Saturday Night* and *Maclean's* (which was at first called *The Busy Man's Magazine*) have survived from the nineteenth century. The strongest twentieth-century newcomers include the *Canadian Home Journal* (1904—combined with *Chatelaine* under the title of the latter in 1958), *La Revue Populaire* (1908), *Ma Paroisse* (1909), *La Revue Moderne* (1919), *Canadian Forum* (1920), *Montrealer* (1926), *Mayfair* (1927), *La Voix Nationale* (1927), *Canadian Homes and Gardens* (1925), *Chatelaine* (1928), *Canadian Geographical Journal* (Lawrence Burpee, 1930), *Atlantic Guardian* (Ewart Young, 1945), *Liberty* (1932), *Canadian Art* (1953), *Canadian Commentator* (Marcus Long, 1957).

Trade and Business Magazines.—Stronger than most of the consumer magazines, at least in terms of continuity and a steady subscription list, are Canadian trade and business publications. This class of periodical is not so subject to American competition as are the mass-appeal magazines. In 1958 more than 400 trade papers, with more than a million subscribers in the aggregate, served accountants, bankers, builders, butchers, carpenters, civil engineers, dairymen, distillers, exporters, florists, grocers, hairdressers, implement dealers, jewellers, journalists, loggers, machinists, nurses, optometrists, policemen, real estate agents, stamp collectors, tobacconists, undertakers, veterinarians, woodworkers, and a great many other occupations and professions.

Cultural Publications.—The difficulties of Canadian cultural publications are the difficulties of cultural publications everywhere. Academic journals draw strength from the universities and learned societies that support them, but the small, non-institutional literary magazines which devote themselves exclusively to *belles lettres* are usually *tour de force* publications that survive only so long as their sponsors and editors (who are often the same persons) can withstand the constant discouragement of low revenues, heavy expenses and continuous, tiring labour.

Among academic publications *Queen's Quarterly* has come down from an earlier press period and still flourishes. Also still alive, but younger, are *La Revue de l'Université de Laval* (from 1918 to 1946 named *Le Canada français*), *Canadian Historical Review* (1920, W. S. Wallace), *Dalhousie Review* (1921, H. L. Stewart), *University of Toronto Quarterly* (1931), *Revue de l'Université d'Ottawa* (1931, Georges Simard, OMI), *Canadian Journal of Economics and Political Science* (1935, V. W. Bladen), *British Columbia Historical Quarterly* (1937, Dr. Kaye Lamb), *Mediaeval Studies* (1939), *Culture* (1940, Association for Research into Religious and Profane Sciences), and *Phoenix* (1946, Classical Association of Canada). Two twentieth-century publications which have not survived are the *McGill University Magazine* (1901-20, called *University Magazine* until 1906), and the *Manitoba Arts Review* (1938-45).

Cultural non-academic publications that began and ended their careers during the fourth press period were *Acadie* (1930, Theodore Goodridge Roberts), *Crucible* (1932-43), *Contemporary Verse* (1941-52, Alan Crawley), *First Statement* (1942-45), *Preview* (1942-45), *Direction* (1943-45), *Northern Review* (1945-56, John Sutherland), and *Here and Now* (1947-49). Magazines which were still being issued in 1958 included the *Canadian Poetry Magazine* (1936, Canadian Authors' Association, V. B. Rhodenizer), *Les Cahiers des Dix* (1936, Aegidius Fauteux), *Fiddlehead* (1945, Bliss Carman Society of Fredericton, Fred Cogswell), *Contact* (1951), *La Nouvelle Revue Canadienne* (1951, Pierre Daviault, René Garneau, Jean Pierre Houle, Guy Sylvestre), *Tamarack Review* (1956, Kildare Dobbs, Millar MacLure, Ivon Owen, William Toye, Robert Weaver, Anne Wilkinson), and *Delta* (1957, Louis Dudek).

FOREIGN LANGUAGE PRESS*

In February 1958 there were 141 ethnic group publications in Canada. Fifteen of these were written entirely in English and five partly in English. The remainder employed neither of Canada's two official languages. Most of the ethnic group press consisted of weekly, semi-monthly and monthly journals but there were some semi-weeklies, tri-weeklies, bi-monthlies, quarterlies and annuals as well. Four Chinese and two Jewish papers were dailies. Many of the ethnic journals were religious publications. Canada's foreign language groups were represented as follows:

Byelorussian.....	1	Jewish.....	12
Chinese.....	6	Latvian.....	2
Croat.....	1	Lithuanian.....	5

Italian.....	5	Swiss (English).....	1
Japanese.....	2	Ukrainian.....	34

THE ADEQUACY OF THE MODERN PRESS OF CANADA

A question that may well be asked concerning the modern press of Canada, as it is asked of the newspapers of other civilized nations, is this: how well is it reflecting and reporting the contemporary world. The enormously improved news-gathering devices of mid-century journalism are, of course, making a vast difference in both world and national news coverage. But in one respect today's journals are perhaps doing a less effective job of recording those aspects of life of concern to the reader than did the newspapers of 1850 in relation to its subscribers. That is not to say that the modern editor and reporter are less able or less conscientious than their nineteenth-century predecessors. Quite the contrary. It is just that today's man of the press has an incredibly harder task—the society he has to describe and interpret has become infinitely more complex than the simple, uncomplicated world of Howe and Mackenzie and Parent.

It is extremely difficult for the modern newspaper reporter or editor to be so well grounded in all the areas of human activity that he can report and interpret every field with equal skill. Ideally, the publisher should hire as reporters and editors specialists, each of whom is competent in his own particular field—but that is an economic impossibility, newspaper costs being what they are today. Therefore the publisher must content himself with hiring 'generalists'—reporters whose knowledge is wide rather than deep. Although it is possible that eventually such inventions as the facsimile newspaper will so drastically reduce other press costs that the publisher may be able to afford the luxury of a large staff of specialists, the present hope of an improved press for Canada seems to lie with those men of the press who are constantly striving to extend and improve their knowledge of the world about them.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

PART I.—THE MOVEMENT AND MARKETING OF COMMODITIES

Domestic trade is broad and complicated; it encompasses all values added to commodities traded, provincially and interprovincially, by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense, it embraces various professional and personal services including amusement services, such as theatres and sports. Only certain phases of this broad field are covered here and, wherever possible, cross references are given to related material appearing in other Chapters. The arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles. The index will be found useful in this respect.

Section 1.—Merchandising and Service Establishments*

Complete coverage of the business of wholesale and retail trades and of service establishments is attempted only as part of the decennial census. The first such detailed survey was taken in connection with the 1931 Census and related to business transacted

* Prepared in the Merchandising and Services Section of the Industry and Merchandising Division, Dominion Bureau of Statistics.

during the calendar year 1930. Similar detailed records were again secured with the 1941 and 1951 Censuses. The results of the 1930 and 1941 Censuses of Merchandising and Service Establishments are contained in Vols. X and XI of the Census reports for those years and the results of the 1951 Census of Distribution in Vols. VII and VIII of the 1951 Census reports. Summary data for 1951 are given in the 1955 Year Book, pp. 953-977.

The information collected at the census is supplemented in intercensal years by monthly, quarterly and annual surveys on the more important phases of the retail, wholesale and service trades—sample surveys for some businesses and full coverage for others. The 1951 Census formed a new base for such surveys and certain improvements have been implemented for continuance during the 1951-61 intercensal period.

Current information available on the more important phases of the distributive trades is given in the following Subsections. Estimates for the years prior to 1951 have been revised in accordance with the census base.

Subsection 1.—Wholesale Trade

Wholesale Sales.—Estimated sales of wholesalers expanded from \$5,744,355,000 in 1951 to \$7,744,103,000 in 1957. These figures include only wholesalers proper, i.e., they exclude agents and brokers and manufacturers' sales branches. Sales estimates are subject to revision and have not been adjusted for price changes.

1.—Wholesale Sales, by Kind of Business, 1954-57

NOTE.—Includes only wholesalers proper, i.e., firms performing the function of buying merchandise on their own account for resale.

Subsection 2.—Retail Trade

The trend of retail trade is one of the best general indicators of the economic condition of the country. It is through retail stores that most goods are ultimately sold and such sales reflect the financial strength of the consumer except in times of short supply. The estimated value of retail sales increased nearly five and a half times during the 1930-57 period. These estimates, not adjusted for price changes, are shown by province in Table 3 and by kind of business in Table 4.

3.—Retail Trade, by Province, 1930 and 1941-57

NOTE.—Figures for 1931-40 are given in the 1957-58 Year Book, p. 938.

Retail Chain Stores.—Retail chains are defined as companies operating four or more retail outlets in the same or related kinds of business. A consistent rise in sales has been evident since statistics were first compiled on chain store operations in 1930.

5.—Retail Chain Store Statistics, 1930 and 1941-57

Operating Results of Retail Chain Stores.—A survey of the operating results of retail chain stores is carried out every second year, alternated with a similar study of independent retailers. In 1957, six of the ten selected trades registered smaller ratios of net operating profit than those obtained in 1955.

7.—Operating Results of Retail Chain Stores for Selected Kinds of Business, 1957

Farm Implement Sales.—The value of farm implements sold in Canada in 1957 was 12.6 p.c. below the 1956 level. Though increases were shown in some types of equipment, major declines were recorded in sales of harvesting and haying machinery, spraying and dusting equipment, wagons and sleighs, and tractors and engines. Sales by major groups and by provinces are given in Tables 10 and 11.

Sales Financing.—Instalment financing undertaken by sales finance companies declined in 1957 as compared with 1956 in both the consumer and commercial and industrial sectors, mainly as a result of lower sales of new passenger and commercial vehicles. On the other hand, balances outstanding at the end of 1957 were the highest on record.

Retail Credit.—Estimated credit granted by retail stores, most of which can be considered as consumer credit, reached a high of \$5,215,000,000 during 1957. Accounts outstanding at Dec. 31, 1957 (i.e., the amount remaining on the books of retailers) exceeded \$1,000,000,000 for the first time. This figure does not, however, give the complete picture of retail credit outstanding, since some instalment credit extended by retailers is sold to sales finance companies.

Subsection 3.—Service Establishments

Service establishments as defined in the Census of Distribution include all those places of business where the major source of gross income (annual turnover) was derived from the rendering of services as opposed to the sale of merchandise. The following types of service were covered: amusement and recreation such as motion-picture theatres and bowling alleys; personal services such as laundries and dry-cleaning plants, barber shops and shoe repair shops; certain business services such as advertising agencies and window display services; repair services such as automobile repair, radio repair and watch repair; burial services; photography, commercial and portrait; hotels and tourist camps; and other services such as cold storage locker rentals and taxis.

Summary statistics of the detailed coverage in 1951 are given in the 1955 Year Book at pp. 974-977. Annual data for certain services only are included here.

Theatres.—The receipts of motion-picture theatres increased steadily up to 1953 when they amounted to \$108,603,966, but thereafter decreased each year to \$82,211,488 in 1957. Drive-in theatres, the most recent of theatre developments, appear to have reached their peak in 1954 with receipts of \$6,316,947.

15.—Motion-Picture Theatres and Receipts, by Province, 1954-57

NOTE.—Figures for 1954-56 include regular and drive-in theatres together with community organizations providing motion-picture entertainment such as churches, lodges, boards of trade, etc., but exclude halls serviced by itinerant operators; figures for 1957 cover regular and drive-in theatres only. Receipts are exclusive of amusement taxes.

Section 2.—The Marketing of Agricultural Products

A special article covering the general movement of farm-produced foods from producer to consumer, with the exception of the grain trade and livestock, appears in the 1956 Year Book, pp. 917-922. Grain and livestock marketings are dealt with in detail in Subsections 1 and 2 following.

Subsection 1.—Grain Trade**Marketing Problems and Policies, 1956-57**

Production and marketings of the five major Canadian grains in the crop year 1956-57 were above the 1955-56 level, exports were down slightly and commercial and farm carry-over increased. In comparison with many recent years, growing conditions were far from ideal in the Prairie Provinces while the remainder of Canada experienced generally excellent growing weather for small grains. Despite adverse conditions in the Prairie Provinces, grain yields in Canada in 1956 were well above average, although excessive rain and early frosts lowered the quality in many areas. Marketings of wheat, oats and barley continued under the compulsory crop-year pools system of the Canadian Wheat Board. All grains in Eastern Canada and rye and flaxseed in Western Canada continued to be traded on the open market.

On July 27, 1956, the Canadian Wheat Board announced the main features of the delivery quota policy for the 1956-57 crop year. As in the preceding year, an initial quota of 100 units was to be effective at local delivery stations as announced by the Board (one unit being equivalent to three bushels of wheat, or five bushels of barley or rye, or eight bushels of oats). The initial quota was followed by general delivery quotas, based upon bushels per specified acre, the specified acreage consisting of the producer's acreage

seeded to wheat (other than Durum), oats, barley and rye plus his acreage in summer-fallow in 1956. By Aug. 31, 1956, the Board was in a position to commence general delivery quotas. The final quota summary for the 2,077 shipping points in the Western Division showed that, at July 31, 1957, 1,602 points were on a quota of six bushels per specified acre, 448 were on a five-bushel quota and 27 stations were reported as "closed". A new feature of the delivery quota policy for 1956-57 was the inclusion of delivery quotas applicable to Durum wheat and flaxseed, with these quotas being established at five bushels per seeded acre effective Aug. 1, 1956. A number of supplementary delivery quotas on Durum wheat were authorized during the crop year with the final authorization of three bushels effective June 14, raising the total delivery quota on Durum wheat to 15 bushels per seeded acre. The flaxseed quota was declared open as at Mar. 22, 1957.

Preliminary data indicate that total marketings of the five major grains in Western Canada in 1956-57 amounted to 585,400,000 bu., an increase of 3 p.c. over both the comparable 1955-56 total of 567,300,000 bu. and the ten-year (1946-47-1955-56) average of 571,100,000 bu. Combined exports of the same grains, including wheat flour, rolled oats and oatmeal, malt and pot and pearl barley in grain equivalent, amounted to 389,000,000 bu., 4 p.c. less than the 1955-56 crop-year exports of 406,500,000 bu. but 5 p.c. more than the 1946-47-1955-56 average of 371,000,000 bu. Carryover stocks of the five major grains in all positions at July 31, 1957, were estimated at 1,120,300,000 bu., about 35 p.c. above the 1956 figure of 828,300,000 bu. and more than double the ten-year average of 465,000,000 bu.

¹ Import and export data for wheat, oats, barley and rye, respectively, include flour in terms of wheat, oatmeal and rolled oats in terms of oats, malt and pot and pearl barley in terms of barley, and rye flour in terms of rye.
² Less than 50,000 bu. ³ Includes human food, seed requirements, industrial use, loss in handling and animal feed.

Wheat.—Supply and Disposition.—Stocks of wheat on hand at the beginning of the 1956-57 crop year, at 579,600,000 bu., were about 8 p.c. above those of the preceding year. Total crop-year supplies, consisting of carryover stocks plus the 1956 production of 573,000,000 bu. and imports of 100,000 bu., reached the record level of 1,152,800,000 bu. Carryover stocks at the end of the 1956-57 crop year amounted to 729,500,000 bu. and exceeded by 18 p.c. the previous record carryover of 618,700,000 bu. at July 31, 1954.

² Less than 50,000 bu.

Price and Marketing Arrangements.—The marketing of Western Canadian wheat during the 1956-57 crop year was again conducted by the Canadian Wheat Board on a one-year pool basis, with the initial payment set at \$1.40 per bu. The initial payment for No. 1 C.W. Amber Durum was continued at \$1.50 per bu. No adjustment payments on the 1956-57 deliveries were made during the crop year but on Feb. 1, 1958, an interim payment on the 1956-57 pool account for wheat was announced, amounting to 10 cents per bu. for all grades except milling grades of Durum for which the interim payment was 25 cents. The full amount of this payment was about \$39,200,000. The final payment on the 1956-57 pool was announced on June 9, 1958, and averaged 6.941 cents per bu. on farmers' deliveries of 361,400,000 bu. Prior to deduction of the Prairie Farm Assistance Act levy the net price realized by producers in the 1956-57 pool for No. 1 Northern wheat, basis in store Fort William-Port Arthur or Vancouver, was \$1.58838 per bu.

The crop year 1956-57 coincided with the first year of the third three-year International Wheat Agreement. Under its provisions, Canada had a guaranteed export quota of 99,700,000 bu. for 1956-57 and, according to the final report on the year's transactions, Canadian sales under the Agreement totalled 58,000,000 bu. These sales continued to be quite widely distributed; 26 of the 42 importing countries included in the pact purchased wheat and/or flour from Canada. The larger purchasers were the Federal Republic of Germany, 17,300,000 bu.; Japan, 16,000,000 bu.; Switzerland, 4,800,000 bu.; Norway, 3,600,000 bu.; Ireland, 2,800,000 bu.; the Philippines, 2,800,000 bu.; the Netherlands, 2,200,000 bu.; and Venezuela, 2,000,000 bu. The greater part of Canada's wheat trade in 1956-57 was carried on in Class II wheat (i.e., wheat exported outside the provisions of the International Wheat Agreement). The United Kingdom continued as the leading importer of Class II wheat, shipments to that country accounting for 79,600,000 bu. of wheat as grain and the equivalent of an additional 10,800,000 bu. in the form of wheat flour.

The combined Canadian exports of 261,800,000 bu. of wheat and flour went to 82 countries, territories and colonies.

During the crop year 1956-57, domestic sales of all classes of wheat were made at the same prices as those prevailing for wheat sold under the International Wheat Agreement. Class II prices for all grades of wheat, except Durum, coincided with the IWA and domestic quotations. The average Class II price received for No. 1 C.W. Amber Durum during the crop year was 45 $\frac{3}{8}$ cents per bu. above the comparable IWA and domestic average price of \$1.98.

Exports of wheat and flour (in terms of wheat) during 1956-57 amounted to 261,800,000 bu., a decrease of 15 p.c. from the 309,200,000 bu. exported in 1955-56. The 1956-57 exports consisted of 228,300,000 bu. of wheat as grain and the equivalent of 33,500,000 bu. of wheat flour. Total domestic (commercial and farm) disappearance of wheat in 1956-57 amounted to 161,400,000 bu., below the 1955-56 figure of 167,200,000 bu. but above the ten-year (1946-47—1955-56) average of 151,000,000 bu. The carryover at July 31, 1957, amounted to a record 729,500,000 bu. reflecting the combined effect of record supplies as well as reductions in both exports and domestic disappearance.

Other Grains.—Supply and Disposition.—Preliminary data on supply and disposition of the major Canadian grains for the crop year 1956-57 together with revised data for 1955-56 are given in Table 20. With the exception of rye, production and carryover of each of the five principal Canadian grains was higher in 1956 than in 1955 and as a result the combined total estimated domestic supplies of wheat, oats, barley, rye and flaxseed amounted to some 2,239,000,000 bu. exceeding by 15 p.c. the comparable 1955-56 figure of 1,938,000,000 bu.

Reflecting increases in exports of oats, barley and flaxseed, which more than offset a decrease in rye shipments, the combined export movement of these four grains, plus the grain equivalent of certain products, amounted to 127,200,000 bu., 31 p.c. higher than the 1955-56 level of 97,300,000 bu. Exports of oats, including rolled oats and oatmeal, climbed sharply from 4,100,000 bu. in 1955-56 to 18,700,000 bu. in 1956-57. The 81,500,000 bu. of barley and its products exported in 1956-57 was the third largest on record and represented an increase of 19 p.c. over the 1955-56 level. Rye exports, at 5,400,000 bu., were down sharply from the 12,900,000 bu. exported in 1955-56. Exports of flaxseed amounted to a record 21,600,000 bu., exceeding the 1955-56 figure of 11,600,000 bu. by 86 p.c.

The effect of larger supplies of oats and barley in the 1956-57 crop year was more than sufficient to offset a higher level of exports for both grains as well as a considerable increase in the domestic disappearance of oats. Reflecting this situation, the July 31, 1957, carryover stocks of both oats and barley were considerably greater than those in 1956. Although supplies of rye in 1956-57 were sharply below those of the preceding year this was largely offset by reductions in both exports and domestic disappearance and as a result the carryover of this grain at July 31, 1957, was only 10 p.c. below that of 1956. Although exports of flaxseed were at a record level, the effect of record supplies and only slightly increased domestic disappearance was sufficient to cause July-end stocks to be more than two and a half times greater than those of the preceding year.

Price and Marketing Arrangements.—The marketing of Western Canada oats and barley was again carried on through compulsory crop-year pools administered by the Canadian Wheat Board. Initial payments for both these grains were the same as in 1955-56, i.e., on the basis of 65 cents per bu. for No. 2 C.W. oats and 96 cents per bu. for No. 3 C.W. Six-Row barley, in store Fort William-Port Arthur. No interim or adjustment payments were made on either grain during the crop year. The 1956-57 oats pool

ended the crop year in a deficit position and therefore no final payment was permissible. Final payment on the 120,571,573 bu. of barley delivered to the 1956-57 pool averaged 6.278 cents per bu. after deduction of payment expenses and the 1-p.c. Prairie Farm Assistance Act levy. Total prices (basis in store Fort William-Port Arthur) realized by producers for representative grades after deducting carrying charges in country and terminal elevators, Board Administrative costs, etc., but prior to deducting the 1-p.c. PFAA levy, were \$1.02011 per bu. for No. 3 C.W. Six-Row barley and \$0.92154 for No. 1 Feed barley.

Preliminary data indicate that some 4,100,000 bu. of rye and 29,000,000 bu. of flaxseed were delivered by farmers in Western Canada in 1956-57, both of these grains being sold on the open market. In Eastern Canada, where commercial grain production is on a much smaller scale, all grain continued to be sold on the open market.

Miscellaneous Grain Trade Statistics

Grain Handled at Eastern Elevators.—The volume of grain handled at eastern elevators in the 1956-57 crop year was somewhat lower than in the preceding year. Total receipts of the five grains amounted to 460,400,000 bu., 6 p.c. lower than in 1955-56, while total shipments of 443,900,000 bu. were 12 p.c. lower. The decrease in both receipts and shipments was accounted for by smaller quantities of wheat and rye handled.

22.—Canadian Grain Handled at Eastern Elevators, Crop Years Ended July 31, 1953-57

NOTE.—Figures for the crop years ended 1922-52 are given in the corresponding table of previous Year Books beginning with the 1931 edition.

Grain Inspections.—The volume of Canadian wheat, oats, barley, rye, flaxseed, corn, buckwheat and mixed grain and a small quantity of United States grain inspected by the Board of Grain Commissioners for Canada in the crop year 1956-57 amounted to 591,200,000 bu. which was 5 p.c. above the 1955-56 total of 560,600,000 bu. Quantities of the various grains inspected at eastern and western points, as well as inspections of soybeans, beans, peas, sample grain, screenings, rapeseed and mustard seed, appear in Table 23.

Lake Shipments of Grain.—The 1957 navigation season opened officially on Apr. 23 and closed on Dec. 14. During that season, total vessel shipments of wheat, oats, barley, rye, flaxseed and buckwheat amounted to 278,600,000 bu., 24 p.c. below the 1956 total of 367,200,000 bu. The 1956 season of navigation opened on Apr. 11 and closed on Dec. 17.

Wheat Flour.—After reaching a peak of 56,033,000 cwt. in 1946-47, Canadian wheat flour production dropped to a postwar low of 39,708,000 cwt. in 1949-50. Production in each of the following three crop years was only slightly below the five-year (1945-46—1949-50) average of 47,012,000 cwt. A relatively sharp drop occurred in 1953-54 and was followed by further slight declines in both 1954-55 and 1955-56. Another sharp drop brought production down to 37,623,000 cwt. in 1956-57. During that crop year only 69.3 p.c. of milling capacity was utilized compared with 73.7 p.c. in 1955-56.

Exports of wheat flour during recent years have followed approximately the same pattern as production, dropping from the 1946-47 peak of 33,117,000 cwt. to 14,582,000 cwt. in 1956-57. The 1956-57 exports of wheat flour amounted to approximately 38.8 p.c. of production, the smallest proportion exported since 38.1 p.c. was exported in the crop year 1939-40.

Subsection 2.—Livestock Marketings*

Commercial marketings of cattle were 16.5 p.c. greater in 1957 than in 1956. Calf marketings increased 4.4 p.c. but the hog movement through recorded commercial channels was down by 9.4 p.c. and that of sheep and lambs decreased by 1.4 p.c. Slaughter classes of steers sold at stockyards and packing plants increased 6 p.c. over 1956 to a record high of 828,736 head. A 17.5-p.c. increase in sales of the heavier grades (over 1,000 lb.) was responsible for the rise; sales of steers up to 1,000 lb. dropped 6 p.c. As compared with 1956, heifer gradings increased 16 p.c., cows increased 11.5 p.c. and fed calves decreased 1.5 p.c. Steers constituted 34.1 p.c. of slaughter cattle in 1957 compared with 35.0 p.c. in 1956. Shipments of feeder cattle and calves from yards and packing plants or on through-billing to Canadian country points outside the province of origin totalled 487,775 head in 1957, an increase of nearly 12 p.c. over the previous year. There was little change in the proportion of hogs graded into each category; Grade A hogs made up 28.7 p.c. of 1957 gradings compared with 28.5 p.c. in 1956, Grade B hogs 50.8 p.c. compared with 50.7 p.c., and Grade C hogs made up 9.9 p.c. of total gradings compared with 9.7 p.c. Judged by the proportion of hog carcasses classified as Grade A, the western provinces as a whole indicated improved quality but in the central provinces the quality was not as good as in 1956. As

* More detailed information is available from DBS annual report *Live Stock and Animal Products Statistics*, and the Department of Agriculture publication *Livestock Market Review*. Statistics of livestock and poultry are given at pp. 426-430 of this edition of the Year Book.

usual, the Maritime Provinces were far ahead of the other provinces in percentage of A gradings. There were fewer sheep and lambs marketed in 1957 than in 1956—515,277 head against 554,808—and little change was shown in the proportion of live lambs graded as “good”—59.6 p.c. compared with 59.1 p.c. in 1956.

Section 3.—Warehousing and Cold Storage*

Warehousing ranks high among the means by which the utilities of 'place', 'time' and 'possession' are added to the products of industry. Its importance has been emphasized in modern times because of the introduction of cold storage methods in the conservation of perishable foods.

The presentation of warehousing statistics is difficult because it is not an easy matter to define clearly what are to be regarded as stocks in storage. In these days of complicated business relationships and especially since the rise of the department store and chain store as characteristic institutions in the retail merchandising field, it often happens that warehousing is carried on in close relationship with merchandising. However, if the strict economic definition of warehousing is adopted, then this term should be restricted to those facilities that add the utility of 'time' to the 'form' utilities that are the product of the extraction and manufacturing industries. Because the warehouses established in close connection with retail trade are more often than not convenient places for the temporary storage of goods in process of transfer from the manufacturer or wholesaler to the consumer, they are not, in the strict economic sense, services that add the utility of 'time' to commodities already worked up into 'form'. As some clear line must be drawn and because separate statistics of the latter branch of storage are not available, it is considered practicable to interpret warehousing in this way.

The statistics of warehousing are gathered together under this Section. Subsection 1 presents statistics of the licensed storage of grain. Subsection 2 deals with cold storage facilities without which perishable foods such as meats, dairy products, fish and fruits could not be exchanged or distributed on a wide scale; it includes also figures of stocks of food on hand. Subsection 3 deals with the storage of petroleum and its products, and Subsection

* Information supplied by various Divisions of the Departments of Agriculture, Fisheries, Mines and Technical Surveys, and National Revenue and of the Dominion Bureau of Statistics.

4 with public warehouses and customs warehouses. The facilities that specialize in the storage of tobacco and alcoholic liquors are analysed in Subsection 5. These bonded warehouses, as they are called, are under the strict surveillance of Federal Government excise officers, who supervise all movements into and from such places of storage.

Subsection 1.—Licensed Grain Storage

Total grain storage capacity in Canada, licensed under the provisions of the Canada Grain Act by the Board of Grain Commissioners for Canada, amounted to 622,200,000 bu. at Dec. 1, 1956, an increase of 22,900,000 bu. over the level at Dec. 1, 1955. Some 18,900,000 bu. of this increase occurred in western country elevators. Licensed grain storage capacity in Canada had reached a peak of 603,000,000 bu. at Dec. 1, 1943, but, following the disposal of heavy wartime stocks, declined to 482,400,000 bu. at Dec. 1, 1947. Since that date, capacity has increased each year.

As in 1955, grain yields in Canada were well above average in 1956, although excessive rain and early frosts lowered the quality in many areas. With bumper crops being harvested in four of the preceding five years, the pressure on Canada's grain storage and handling facilities continued heavy. Farmers' marketings of western grain are governed to a considerable extent by space made available in country elevators as grain moves forward into domestic and export channels. As indicated in Table 28, there was almost no variation in the proportion of elevator space occupied at Nov. 28 and Apr. 3 in the 1956-57 crop year but by July 31 the proportion occupied had increased to 80.9 p.c. Information is given in the table for only three dates in the crop year, but weekly data on stocks of grain in various commercial positions may be obtained from the DBS bulletin *Grain Statistics Weekly*.

28.—Licensed Grain Storage Capacity and Grain in Store, Crop Years 1955-56 and 1956-57

NOTE.—Because these figures are exclusive of stocks in transit or in Eastern Canada mills, they are lower than those shown in Table 22, p. 919.

Subsection 2.—Cold Storage and Storage of Foods

Cold Storage Warehouses.—Under the Cold Storage Act (R.S.C. 1952, c. 52), as amended (R.S.C. 1952, c. 313), subsidies are granted by the Federal Government to encourage the construction and equipment of cold storage warehouses open to the public. The Act is administered by the Department of Agriculture.

There are five classifications of cold storage warehouses in Canada: (1) public warehouses that store foods and food products and where the entire space is open to the public; (2) semi-public, or those that store foods and where part of the space is retained for the products of the owner and the remainder is available to the public; (3) private, or those that store foods and food products and allot no space to the public, a classification that includes refrigerated space in connection with abattoirs, creameries, dairies, cheese factories and wholesale and retail distributing warehouses; (4) locker plant, where the total space is occupied by lockers for rental to the public and where food and food products may be cut, processed, chilled and frozen for storage in lockers; and (5) bait depots, where space is used solely or principally for the freezing and storing of bait for the use of fishermen.

No hard and fast rule can be laid down for distinguishing between public and private warehouses. In general those owned and operated by firms trading in the goods stored in the warehouse are considered as private, although most of these places rent space to the public when it is not required for their own purposes.

The figures in Tables 29 and 30, compiled by the Department of Agriculture, give some idea of the cold storage warehouse capacity in Canada, but it must be explained that it is not possible to secure completely accurate information on this subject and that the figures are approximations only.

Cold Storage Holdings of Fish.—Stocks of frozen fish held in Canada during 1956 followed the usual seasonal trend. Normally, stocks are drawn down during the early months of the year and reach a low point at the beginning of April or May when fishing has almost ceased; during subsequent months they increase, and reach a peak at the beginning of October or November. In 1956, stocks were on the average slightly higher than in 1955.

Holdings of frozen fish at any particular time tend to reflect the strength of the market as well as the level of production. For example, the 1956 production of frozen Pacific halibut was higher than in 1955 and prices were good. At the end of the season, however, prices dropped sharply, exports declined and larger-than-normal holdings were carried over into the 1957 marketing year. At the beginning of the year, stocks of frozen Pacific salmon were much lower than in the previous year. A decline in exports more than offset

an increase in production, and stocks in the last few months of the year were much higher than in the previous year. While the 1956 production of frozen groundfish fillets (including blocks) was higher than in 1955, the demand for these products in the United States market was greater than in 1955. Even so, stocks remained generally higher than in the previous year, especially during the last half of the year.

32.—Storage Stocks of Fish, by Month and by Type, 1955 and 1956

NOTE.—Stock totals are as at the beginning of each month; stocks of individual products are monthly averages.

Cold Storage of Dairy Products.—Cold storage facilities are a necessary adjunct in the manufacture of dairy products, most of which are perishable in varying degrees. All creameries have facilities for the storing of butter, the size and type of storage depending on the size of the creamery. If the butter produced at small country plants is not printed for immediate sale, the butter solids are disposed of or are transported to larger creameries where better refrigeration is available or to private or public cold storages in the larger urban centres. Temperature control is important in the curing process for cheese as well as in the prevention of deterioration. Most cheese factories are equipped with mechanical refrigeration and are required to have storage capacity for 17 days' produce during the period of maximum manufacture. The cheese is then transferred to central warehouses. As soon as milk is bottled it is placed in storage and held until delivery. Dry whole milk and other dried milk products containing fat are usually stored in cool air chambers to prevent rancidity.

Cold Storage of Apples and Potatoes.—Cold storage space for apples in Canada has increased rapidly in recent years as a result of the promotion of orderly marketing, the extension of the marketing season generally, and increased production in some areas. This trend has followed the curtailment in shipments to traditional markets in the United Kingdom and other European countries after World War II. There has been an increase recently in the construction of both private and co-operatively owned storages, particularly in the Province of Quebec.

Potatoes are not ordinarily held in cold storage but recently there has been an increase in the construction of potato storage houses and warehouses in the commercial producing areas.

Subsection 3.—Storage of Petroleum and Petroleum Products

Bulk storage plants for petroleum and petroleum products are established at convenient distributing centres, usually on a waterfront so that full advantage may be taken of the lower cost of water-borne traffic. From these centres the goods are transferred by boat,

rail or truck to smaller distributing depots or directly to retail outlets. The principal refining and distributing centres are located at or near Halifax, Quebec, Montreal, Ottawa, Toronto, Sarnia, Fort William, Regina, Calgary, Turner Valley, Edmonton and Vancouver.

Subsection 4.—General Warehousing

Public Warehouses.—The summary statistics of the warehousing industry in Canada presented in Table 34 cover the operations of the majority of firms offering warehousing and storage facilities to the public. The 1957 statistics include returns from 234 operators as compared with 227 reporting in 1956. Associations and organizations such as co-operatives operating warehouses or storages for their own members are not included nor are packing houses and other firms operating storage facilities in connection with their respective businesses. Many public warehousing companies also operate a local moving and cartage service and others a motor carrier business, including long-distance moving. For some firms, revenues from motor carrier activities represent a large percentage of total receipts. Small food lockers are not included except where they may be part of a general warehousing business.

¹ Included with semi-trailer units.

Customs Warehouses.—Warehouses for the storage of in-bond goods are known as customs warehouses. They are divided into seven classes: (1) those occupied by the Federal Government, some of which are used for examination and appraisal of imported goods and others, known as Queen's warehouses, used for the storage of unclaimed, abandoned, seized or forfeited goods; (2) warehouses consisting of an entire building or part thereof properly partitioned from the remainder of the building, which are used exclusively for the storage of in-bond goods consigned to the operator of the warehouse; (3) buildings or parts of buildings properly partitioned off, used for storage of in-bond goods consigned to the operator or others; (4) sufferance warehouses operated by shipping companies or airlines for the safe keeping of in-bond goods arriving by water or air before entry at customs, those operated by railway companies or express companies for landing, safe-keeping, transferring, delivering and forwarding of in-bond goods, and those operated by a person or group of persons other than those previously specified for the safe-keeping of in-bond goods before entry at customs, transported in-bond by rail, water, air or highway; (5) yards, sheds or other suitable enclosures for the storage of imported coal and coke; (6) farms, yards, sheds, etc., which an importer of horses or sheep intends to use for the feeding and pasturing of imported animals; (7) yards, sheds or other suitable enclosures which importers intend to use for the storage of goods too heavy or too bulky to be accommodated in a class 2 or 3 bonded warehouse.

Subsection 5.—Bonded Warehousing and Storage of Wines

Bonded Warehousing.—The Excise Duty Branch of the Department of National Revenue considers any premises licensed under the Excise Act to be a warehouse, whether for storage of raw materials to produce finished tobacco or cigar products or for spirits or malt used for brewing. Practically the total production of spirits is placed in bonded warehouses and only a small part of the output of beer is retained in storage. Wine, unlike spirits and beer, is not secured under bond. All imports of alcoholic beverages must go through bonded warehouses before being released to Provincial Liquor Commissions or Boards, or other agencies authorized by the Commissions or Boards to take alcoholic beverages out of bond. Similarly, tobacco, cigars and cigarettes that are not stamped and duty paid are secured in bond. In addition to these warehouses, there are those in which no manufacturing or production is carried on but which are used solely for the storage of goods upon which duty has not been paid. Goods are stored in these warehouses usually for the purpose of rapid distribution and for delivery as ships' stores.

Table 35 shows the quantities of distilled liquor, tobacco, cigars and cigarettes in bond in recent years. In addition, the year-end inventories of beer in breweries was 28,863,726 gal. in 1957; information for 1958 was not available at press date.

¹ Duty has been paid herein on the malt.² Duty solely on gallonage basis since 1954.

Storage of Wines.—The wine industry is confined to a few localities such as the Niagara Peninsula in Ontario and the Okanagan Valley in British Columbia. Firms manufacturing native wines are not bonded, as far as the Federal Government is concerned, nor is wine in storage for maturing placed in bond. The only goods warehoused in bond in connection with wineries are sugar supplies and supplies of grape spirit distilled by the distilleries and held by the wineries for fortifying wines.

Section 4.—Co-operative Organizations*

Marketing and purchasing co-operatives play an important role in the marketing of agricultural products and in the purchasing of supplies for farm people in Canada. During 1956-57, the membership of such co-operatives increased by 108,000 to a total of over 1,300,000. It is probable that the great majority of farm families in most provinces are members of one or more marketing and purchasing co-operatives, though membership is not prevalent among rural non-farm and urban families.

The number of co-operative associations and places of business declined during 1956-57 mainly as a result of amalgamations and changes in organization; total business, which amounted to \$1,126,000,000 for the year, represented a small increase over 1955-56. In both years, co-operatives accounted for 30.5 p.c. of the total value of farm products marketed in Canada. Sales of farm products by the marketing and purchasing group showed little change in 1957 over 1956, amounting to \$825,000,000 in the later year. Grains and seeds valued at \$377,000,000 made up 46 p.c. of the total value of farm products marketed and sales of livestock and dairy products together reached an almost equal amount. Eggs and poultry constituted the third largest item, with sales amounting to \$39,000,000.

Among the provinces, Saskatchewan and Alberta recorded the greatest value of produce marketed, amounting to \$224,000,000 and \$143,000,000 respectively. Grains make up a large proportion of the co-operative marketing in these two provinces. Ontario, with almost half the co-operative livestock sales, was in third place and Quebec, which markets a much larger volume of dairy products and eggs and poultry through co-operatives than any other province, was fourth.

Co-operative sales of merchandise and supplies to members amounted to \$284,000,000 in 1957, an increase of \$25,000,000 over the previous year: feed and fertilizer represented 35 p.c. of the total. In this type of business, Quebec co-operatives led the provinces with sales of \$68,000,000, followed closely by Saskatchewan and Ontario.

Members' equity in their marketing and purchasing co-operatives increased by \$15,000,000 during 1957 and an increase of \$3,000,000 was recorded in liabilities to members.

The local co-operatives are served by ten wholesale associations which are owned and controlled by their respective member co-operatives. These wholesale associations had assets amounting to \$58,000,000 in 1957, varying from \$25,000,000 for the largest to \$81,000 for the smallest. Total sales of supplies and farm products by these wholesales amounted to \$219,000,000 in 1957, a figure \$7,000,000 higher than in the previous year.

There are, in addition, numerous co-operative associations operating in various service fields, 770 of which reported their activities in 1957. These reporting associations had a total membership of 255,188 and assets amounting to \$72,325,533. Their services included provision of housing, rural electrification, medical insurance, transportation, recreation facilities, custom grinding, seed cleaning, operation of farm machinery, leasing of grazing land, restaurant operation, and other services.

* Prepared under the direction of the Deputy Minister, Department of Agriculture, Ottawa.

The data for marketing and purchasing co-operatives do not include fishermen's co-operatives. Though fishermen have formed co-operative organizations in most of the areas having a substantial fishing industry, the volume of their collective business is much smaller than that of agricultural co-operatives. In 1957 fishermen's co-operatives reported sales of fish amounting to \$17,410,337, which constituted about 9 p.c. of all fish marketed in Canada. They sold \$2,929,714 worth of supplies to their members.

Section 5.—Interprovincial Freight Movements*

Statistics relating to interprovincial freight movements are difficult to collect owing to the absence of controls or customs barriers. Provincial freight traffic statistics are available for loadings and unloadings of goods carried by rail, water, pipeline and motor transport.

Details of railway freight movement are confined to tons loaded and unloaded by province and contain a certain amount of import and export of goods shipped by water.

* Revised in the Transportation and Public Utilities Section, Public Finance and Transportation Division, Dominion Bureau of Statistics.

Movements from 1956 onward are not strictly comparable with those of earlier years since water-borne imports at lake or ocean ports, formerly shown as receipts from foreign rail connections, are now included in domestic loadings. This change makes possible an analysis of traffic entering the country by rail from the United States, classified according to goods destined to points in Canada and goods passing through Canada. However, as railway freight tonnages in each province include freight received from and delivered to water connections, in addition to receipts from local industries, the differences between loadings and unloadings no longer reveal provincial net export and import data for railway revenue freight traffic. Consequently, statistics presented in Table 41 must not be taken as a precise measure of total interprovincial freight movement by rail; these figures indicate only the net interprovincial movement of railway freight, which is but one aspect of that trade.

For water-borne traffic, Table 42 shows tonnages of all cargoes unloaded at Canadian ports in both interprovincial and intraprovincial trade, by province of origin. The 1957 figures contain, for the first time, traffic of non-customs ports and as a result are not strictly comparable with data for 1956.

Interprovincial data for oil carried by pipeline is given in Tables 43 to 45; Table 43 shows the quantity of oil entering Canadian pipelines by province and by type of line, and Table 44 shows the quantity of oil delivered by Canadian pipelines by province and by type of line. Oil movement by pipeline between Canada and the United States is also included in Tables 43 and 44; imports for each province are shown in Table 43 and exports for each province in Table 44. Canadian crude oil re-imported by the Interprovincial Pipe Line Company through its pipeline in southern Ontario is shown separately in Table 45.

PART II.—GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE

During the postwar period, the elaborate system of government control of trade that the war effort made necessary was gradually relaxed (*see* the 1948-49 Year Book, pp. 837-841) until, by the beginning of 1949, only those measures to protect domestic requirements and prevent the forcing upward of prices in the Canadian market remained; since then even these have practically disappeared.

Section 1.—Controls Affecting the Handling and Marketing of Grain

The agencies exercising control of the grain trade in Canada include the Board of Grain Commissioners which since 1912 has administered the provisions of the Canada Grain Act, and the Canadian Wheat Board which operates under the Canadian Wheat Board Act, 1935. The former is a quasi-judicial and administrative body which, through the powers vested in it in matters of interprovincial transportation and patents and copyrights, gives the Federal Government complete power to control the handling of grain; it has no power or duties in respect of grain prices. The Canadian Wheat Board, which began to function in the autumn of 1935, was a natural outgrowth of government stabilization measures that were taken during the depression years of the 1930's in regard to the marketing of grain crops. During this period the Government acquired a considerable quantity of wheat and, in the 1935 session of Parliament, legislation was passed to serve the dual purpose of disposing of the holdings so acquired and at the same time arranging for the marketing of new crops.

An account of the organization and functions of the Board of Grain Commissioners appears in the 1941 Year Book, pp. 481-482. An article on the operations of the Canadian Wheat Board is commenced in the 1939 Year Book, pp. 569-580, and concludes in the 1947 edition. Certain information on current operations is given in Subsection 1 of Section 2 of this Chapter dealing with the Grain Trade.

Section 2.—Combinations in Restraint of Trade*

The purpose of Canadian anti-combines legislation is to assist in maintaining free and open competition as a prime stimulus to the achievement of maximum production, distribution and employment in a system of free enterprise. To this end, the legislation seeks to eliminate certain practices in restraint of trade, which serve to prevent the nation's economic resources from being most effectively used for the advantage of all citizens.

* Revised by T. D. MacDonald, Q.C., Director of Investigation and Research, Combines Investigation Act, Department of Justice, Ottawa.

The first federal legislation in this field, enacted in 1889, is still effective in amended form as Sect. 411 of the Criminal Code and is the mainstay of Canadian anti-combines legislation. Generally speaking, this Section forbids suppliers (manufacturers, wholesalers, retailers) to arrange among themselves to eliminate competition over a substantial part of any market by limiting production, restricting distribution or fixing prices.

Sect. 411 of the Criminal Code and the Combines Investigation Act (R.S.C. 1952, c. 314) are complementary pieces of legislation. The latter was enacted in 1923 and amended extensively in 1935, 1937, 1946, 1949, 1951 and 1952. It repeats in Sects. 2 and 32 some of the substance of Sect. 411 but, while the latter relates chiefly to arrangements among separate firms, the former embraces any "merger, trust or monopoly" relating to a commodity, which has operated or is likely to operate to the detriment or against the interests of the public.

The Combines Investigation Act, in Sect. 34, also forbids a supplier of goods from prescribing the prices at which they are to be resold by wholesalers and retailers, i.e., the practice of "resale price maintenance". The supplier may, however, *suggest* resale prices as long as he does nothing to induce or require the trade to adhere to them.

Sect. 412 of the Criminal Code deals with what are commonly called "price discrimination" and "predatory price cutting". It provides that a supplier may not make a practice of discriminating among those of his trade customers who come into competition with one another, by giving one a preferred price which is not available to another if the second is willing to buy in like quantities and qualities as the first; and it also forbids a supplier from selling at prices lower in one locality than in another, or unreasonably low anywhere, if the purpose or effect of his actions is to lessen competition substantially or to eliminate a competitor.

These provisions, Sects. 411 and 412 of the Criminal Code and Sects. 2, 32 and 34 of the Combines Investigation Act, contain the substantive law relating to restrictive trade practices. The other provisions of the Combines Investigation Act relate to investigation and enforcement.

The Act provides for a Director who is responsible for investigating combines and other restrictive practices, and a Commission (the Restrictive Trade Practices Commission) which is responsible for appraising the evidence submitted to it by the Director and the parties under investigation, and for making a report to the Minister. When there are reasonable grounds for believing that a forbidden practice is engaged in, the Director may obtain from the Commission authorization to examine witnesses, search premises, or require written returns. After examining all the information available, if the Director believes that it proves the existence of a forbidden practice, he submits a statement of the evidence to the Commission and to the parties believed to be responsible for the practice. The Commission then sets a time and place at which it hears argument on behalf of the Director in support of his statement; and hears argument and receives evidence on behalf of any persons against whom allegations have been made in the statement. Following this hearing, the Commission prepares and submits a report to the Minister, ordinarily required to be published within thirty days.

The Act also provides for general inquiries into restraints of trade which, while not forbidden or punishable, may affect the public interest. It further provides that the courts, in addition to imposing punishment for a contravention of the legislation, may make an order restraining persons from embarking on, continuing or repeating a contravention. The constitutionality of the Section providing for restraining orders, which was enacted in 1952, has been upheld by the Supreme Court of Canada.

In the years 1951-57, the following reports of inquiries under the legislation have been published:—

- (1) Manufacture, Distribution and Sale of Mechanical Rubber Goods; Tires and Tubes; Accessories and Repair Materials; Rubber Footwear; Heels and Soles; Vulcanized Rubber Clothing.
- (2) Distribution and Sale of Bread and Other Bakery Products in the Winnipeg Area.
- (3) Manufacture, Distribution and Sale of Fine Papers.
- (4) Distribution and Sale of Coarse Papers in British Columbia.
- (5) Purchase of Maple Syrup and Maple Sugar in the Province of Quebec.
- (6) Manufacture, Distribution and Sale of Electrical Wire and Cable Products.
- (7) Resale Price Maintenance in the Sale of Soap and Soap Products in the Montreal District.
- (8) Price Discrimination between Retail Hardware Dealers in North Bay, Ont.
- (9) Resale Price Maintenance in the Sale of Certain Household Supplies in the Chicoutimi-Lake St. John District of Quebec.
- (10) Distribution and Sale of Gasoline at Retail in the Vancouver Area.
- (11) Resale Price Maintenance in the Sale of China and Earthenware.
- (12) Resale Price Maintenance in the Distribution and Sale of Television Sets in the Toronto District.
- (13) Manufacture, Distribution and Sale of Wire Fencing in Canada.
- (14) Distribution and Sale of Coal in the Timmins-Schumacher Area of the Province of Ontario.
- (15) Loss Leader Selling.
- (16) Manufacture, Distribution and Sale of Beer in Canada.
- (17) Manufacture, Distribution and Sale of Asphalt and Tar Roofings and Related Products in Canada.
- (18) Resale Price Maintenance in the Distribution and Sale of Certain Household Appliances.
- (19) Manufacture, Distribution and Sale of Transmission and Conveyor Equipment and Related Products.
- (20) Retail Distribution and Sale of Coal in Winnipeg.
- (21) Manufacture, Distribution and Sale of Quilted Goods, Quilting Materials and Related Products.
- (22) Manufacture, Distribution and Sale of Boxboard Grades of Paperboard.
- (23) Production, Purchase and Sale of Flue-Cured Tobacco in Ontario.
- (24) The Sugar Industry in Western Canada and a Proposed Merger of Sugar Companies.
- (25) Manufacture, Distribution and Sale of Metal Culverts and Related Products.

These reports are obtainable from the Queen's Printer or from the office of the Director of Investigation and Research, Combines Investigation Act, Department of Justice, Ottawa.

Section 3.—Trade Standards*

The Standards Division of the Department of Trade and Commerce consolidates under one Director the administration of the Electricity Inspection Act, the Gas Inspection Act, the Exportation of Power and Fluids and Importation of Gas Act, the Precious Metals Marking Act, the Weights and Measures Act, and the National Trade Mark and True Labelling Act.

Commodity Standards.—On Nov. 26, 1949, Parliament passed the National Trade Mark and True Labelling Act (R.S.C. 1952, c. 191) which provides a framework for the development of the National Standard and true labelling in order to circumvent public deception in advertising. In brief, the use of the National Standard is voluntary and compliance with commodity standards affects only those manufacturers who desire to use the national trade mark. In addition, where manufacturers descriptively label any commodity or container, it must be labelled accurately to avoid public deception. The regulation applying to the labelling of fur garments, for example, has been established as a code of fair practice throughout the merchandising field.

* Prepared by R. W. MacLean, Director, Standards Division, Department of Trade and Commerce, Ottawa.

Under the terms of the Precious Metals Marking Act, 1946 (R.S.C. 1952, c. 215) commodities composed of gold, silver, platinum or palladium may be marked with a quality mark describing accurately the quality of the metal. Where such mark is used, a trade mark registered in Canada, or for which application for registration has been made, must also be applied. Gold-plated or silver-plated articles may also be marked under certain conditions outlined in the Act. The inspection staff of the Standards Division is engaged in the examination of advertising matter, in verifying the quality of articles offered for sale, and in checking the marks applied.

Weights and Measures.—The Weights and Measures Act (R.S.C. 1952, c. 292) prescribes the legal standards of weight and measure for use in Canada. The Act requires control of the type of all weighing and measuring devices used for commercial purposes and their periodic verification and surveillance directed towards the elimination of sales by short weight or short measure. The number of inspections made in the calendar year 1957 was 469,119 compared with 478,103 in 1956. The more important inspections comprised the following: weighing machines including scales of all kinds, 227,827; measuring machines for liquids, 96,350; weights, 128,848; other measures, 16,094. Total expenditure was \$966,157 in the year ended Mar. 31, 1958, compared with \$849,102 in the previous fiscal year and total revenue \$747,744 compared with \$752,196.

Electricity and Gas Inspection.—Responsibilities of the Standards Division under the Electricity Inspection Act (R.S.C. 1952, c. 94) and the Gas Inspection Act (R.S.C. 1952, c. 129) comprise the testing and stamping of every electricity and gas meter used throughout Canada for billing purposes, the object being to ensure the correct measurement of all electricity and gas sold. Canada is divided into 21 districts for administration of the two Acts and staff numbers 185. During the year ended Mar. 31, 1958, 1,191,180 electricity and gas meters were tested as compared with 1,224,752 in the preceding year. Revenue derived from the testing amounted to \$922,529 and expenditure to \$920,338.

¹ Newfoundland included from 1950.

² Excludes acetylene meters included in previous years.

The Exportation of Power and Fluids and Importation of Gas Act (3-4 Eliz. II, c. 14) was passed in 1955 to replace the Electricity and Fluid Exportation Act which came into force in 1907. Under its provisions, no electric energy or fluid, whether liquid or gaseous,

may be exported from Canada and no gas imported into Canada without a licence. Total exports of electric energy during the year ended Mar. 31, 1958, amounted to 4,809,850,411 kwh. There were also exports of natural gas and crude oil as well as imports of natural gas.

Section 4.—Government Aid to Small Business

The Small Business Branch of the Department of Trade and Commerce was established in November 1958 to provide liaison between the Government and small business, to study the problems of small business, and to advise the Government on measures that should be taken to meet them. More specifically, the functions of the Branch are as follows: (a) to act as a clearing house in referring inquiries of small business to the appropriate departments of government—federal, provincial and municipal—and to other organizations and institutions; (b) to compile and distribute bulletins and reports on topics of general interest to small business, including information on government procurement; (c) to assist small business, on request, in obtaining statistical, technical and other information on management, production and marketing problems; (d) to undertake studies concerning small business, particularly for the guidance of the Government in developing new policies in this field, and as background material for dealing more effectively with the problems of small business; (e) to consult and co-operate with educational institutions, representative business associations and other private organizations.

Section 5.—Patents, Copyrights and Trade Marks*

Letters patent are issued subject to the provisions of the Patent Act (R.S.C. 1952, c. 203), effective since 1935. Applications for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa.

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to a peak of 16,261 in the year ended Mar. 31, 1958. Roughly, 72 p.c. of the patents granted were to residents of the United States, 10 p.c. to residents of the United Kingdom and other Commonwealth countries and 5 p.c. to residents of Canada.

Printed copies of patents issued from Jan. 1, 1948, to date are available at a nominal fee. The Canadian *Patent Office Record* gives a brief digest of each patent.

Canadian and foreign patents may be consulted at the Patent Office Library. The Library has records of British patents and abridged specifications thereof from 1617 to date, and of United States patents from 1872 to date, as well as many patents, indexes, journals and reports from Australia, New Zealand, South Africa, India, Pakistan, France, Belgium, Austria, Norway, Mexico, Italy, Sweden, the Netherlands, Switzerland, Japan, Korea and Brazil.

* The material relating to patents and copyrights was revised by J. W. T. Michel, Commissioner of Patents, and that relating to trade marks by J. P. McCaffrey, Registrar of Trade Marks, Department of the Secretary of State, Ottawa.

Copyrights, Industrial Designs and Timber Marks.—Registration of copyright is governed by the Copyright Act (R.S.C. 1952, c. 55) in force since 1921. Applications for protection relating to copyrights should be addressed to the Commissioner of Patents, Ottawa.

The Act sets out the qualifications for a copyright and its duration: "Copyrights shall subsist in Canada . . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol . . . or resident within Her Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death."

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection in Canada, in all parts of the Commonwealth, in foreign countries of the Copyright Union and in the United States of America.

Protection of industrial designs and of timber marks is afforded under the Trade Mark and Union Label Act and the Timber Marking Act. Registers of such designs and marks are kept by the Copyright Branch of the Patent Office and information regarding them is published in the *Patent Office Record*.

Trade Marks.—The Trade Marks Office, a Branch of the Department of the Secretary of State, administers the Trade Marks Act (1-2 Eliz. II, c. 49) which covers all legislation concerning the registration and use of trade marks and supersedes from July 1, 1954, former legislation enacted under the Unfair Competition Act, the Industrial Design and Union Label Act and the Shop Cards Registration Act. All correspondence relating to an application for registration of a trade mark or for the use of a trade mark should be addressed to the Registrar of Trade Marks, Ottawa.

A *Trade Marks Journal* is published weekly giving particulars of every registration of a trade mark and every registration of a registered user, as well as other advertisements and rulings required under the Act. The required fee payable on application for registration of a trade mark is \$25 and for registration of a person as a registered user of a trade mark, \$20.

Section 6.—Subventions and Bounties on Coal*

The major problem of the Canadian coal mining industry arises from the fact that its fields are situated far distant from the main consuming markets of the Provinces of Ontario and Quebec while these markets lie in close proximity to the bituminous and anthracite fields of the United States. Transportation subventions, which have been maintained in varying degree during the past 30 years, were designed to further the movement of Canadian coals to some portions of central Canada by equalizing as far as possible the laid-down costs of Canadian coals with imported coals. Subventions have been regulated by Orders in Council; it has not been considered practicable to fix the assistance by statute because of frequent changes in the competitive situation.

The Canadian Coal Equality Act (R.S.C. 1952, c. 34), which implemented one of the recommendations of the Royal Commission on Maritime Claims (1926), is designed to assist the Nova Scotia steel industry and only incidentally affects coal. It provides for the payment of 49.5 cents per ton on bituminous coal mined in Canada and converted into coke to be used in the Canadian manufacture of iron and steel. Bounties paid under this authority for the years 1953-57 were as follows:—

Section 7.—Control and Sale of Alcoholic Beverages

The retail sale of alcoholic beverages in Canada is controlled by provincial and territorial government liquor control authorities. Alcoholic beverages are sold directly by most of these liquor control authorities to the consumer or to licensees for resale. However,

* Revised by G. W. McCracken, Administrative Officer, Dominion Coal Board, Ottawa. Additional information on subventions and bounties, summarized from the *Report of the Royal Commission on Coal, 1946*, is given in the 1947 Year Book, pp. 770-771.

in some provinces beer and wine are sold directly by breweries and wineries to consumers or to licensees for resale. During the year ended Mar. 31, 1957, provincial government liquor control authorities operated 730 retail stores.

Table 6 shows revenue from administration of liquor control by provincial and territorial governments. Details are given in DBS report, *The Control and Sale of Alcoholic Beverages in Canada*.

6.—Provincial Revenue from Administration of Liquor Control, Years Ended Mar. 31, 1956 and 1957

NOTE.—Figures include revenue collected directly by the provincial and territorial governments as well as revenue of the liquor authorities, but exclude revenue resulting from a general retail sales tax on alcoholic beverages imposed by five provinces.

PART III.—BANKRUPTCIES AND COMMERCIAL FAILURES

The two Sections of this Part, although closely related as far as subject matter is concerned, cover different aspects of the field of bankruptcies and commercial failures; thus the statistics presented in each Section are not comparable with those given in the other Section.

Section 1 is limited to the supervision, by the Superintendent of Bankruptcy, of the administration of bankrupt estates under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act). This Section, however, gives definite information on the

amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can therefore be assumed that this applies in even greater degree to the more extended fields covered in Section 2.

Section 2 is limited to bankruptcies and insolvencies made under federal legislation (the Bankruptcy Act and the Winding-Up Act) but does not include failures, sales or seizures carried out apart from such federal legislation. The Dominion Bureau of Statistics coverage has been revised back to January 1955 to include business failures only (*see* p. 948). The figures of assets and liabilities are estimates made by the debtor and, because they are not made uniformly, should be accepted with reservations.

Previous editions of the Year Book contained a third statistical Section dealing with bankruptcy and commercial failures compiled by Dun and Bradstreet, Inc., a mercantile agency interested primarily in credit information. Because this agency was the only source of figures of commercial failures between the years 1875 and 1919, its statistics have an added value since they present a historical series from 1915, although the basis of classification was changed after 1933. The latest information from this source appears in the 1957-58 edition of the Year Book at pp. 984-986.

Section 1.—Administration of Bankrupt Estates*

Federal insolvency legislation now comprises the Bankruptcy Act 1949 (R.S.C. 1952, c. 14), the Farmers' Creditors Arrangement Act 1943 (R.S.C. 1952, c. 111), the Companies' Creditors Arrangement Act and to some extent the Winding-Up Act. The two Arrangement Acts are designed to avert failure and the statistics in this Section and in Section 2 therefore do not include proposals or arrangements under these Acts. When such proposals or arrangements are rejected by the creditors or fail in their purpose, the proceedings may then come under the Bankruptcy Act, the bankruptcy provisions of the Farmers' Creditors Arrangement Act or, in certain circumstances, the Winding-Up Act. There are no provisions in the Companies' Creditors Arrangement Act for the liquidation or winding-up of insolvent companies.

* Prepared by the Superintendent of Bankruptcy, Ottawa. Early bankruptcy and insolvency legislation is reviewed in the 1952-53 Year Book, pp. 914-915.

Section 2.—Returns under the Bankruptcy and Winding-Up Acts as compiled by the Dominion Bureau of Statistics

The statistics concerning bankruptcies and insolvencies published by the Dominion Bureau of Statistics cover only the failures coming under federal legislation, i.e., the Bankruptcy Act and the Winding-Up Act. Certain documents relating to estates administered under these Acts have, since July 1920, been forwarded to the Dominion Statistician for statistical analysis. The Bankruptcy Act of 1949 altered the administration of bankruptcies by providing for proposals from insolvent persons. Since July 1950, agreements made under this method have not been included with the statistics of bankruptcy, so that subsequent figures are not strictly comparable with those for previous years. In Table 2 the number of proposals for recent years is shown so as to give a general impression of the trend.

Recently, a major revision has been made in the compilation and presentation of commercial failures statistics by the Dominion Bureau of Statistics. Previously, although these statistics covered only failures coming under federal legislation, they included assignments of individuals. The coverage of the revised series has been limited to business failures only, excluding failures of individuals such as wage-earners, salesmen and executive personnel. This revision was extended back to January 1955.

Failures of wage-earners (which are not classed as commercial failures in the revised DBS statistics) rose substantially to 1,320 in 1957 as compared with 974 in 1956. Most of the wage-earner failures occurred in Quebec in both years, the total for that province in 1957 being 1,245.

In Table 2, bankruptcies and insolvencies for the year 1955 are given on both the old and the new bases, so as to show the extent to which the series has been altered. This practice is also followed in Tables 3 and 4.

The disparity in the number of cases closed in 1956 as compared with 1955 results from the fact that a change in the policy previously applied was made with effect from Jan. 1, 1956. Instead of considering, as heretofore, an estate closed upon the receipt of the trustees' final statement, the matter was considered as remaining under administration until discharge was granted by the court.

Two estates were reported during 1957 under the provisions of the Farmers' Creditors Arrangement Act. Of the cases under administration at the beginning of the year, three were completed in 1957.

2.—Bankruptcies and Insolvencies under Federal Legislation, by Province, 1948-57

NOTE.—Figures from 1923 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

PART IV.—PRICES*

Section 1.—Index Numbers of Wholesale Prices

The term "wholesale prices" refers in this Part to sales transactions that occur below the retail level; it has more of a connotation of bulk purchase than of any homogeneous level of distribution. Ingredients for the general wholesale price index are obtained mainly from manufacturers but include prices from wholesalers proper, assemblers of primary products, agents and the other types of commercial enterprises who trade in commodities of a type or in quantities characteristic of primary marketing functions. Wholesale price indexes are grouped according to a commodity classification scheme based on chief component material similarities. In addition, indexes classified according to degree of manufacture are available. For the latter, however, because significant groups of manufactured products are not directly included, tabulations are not attempted on narrower bases than "Raw and Partly Manufactured" and "Fully and Chiefly Manufactured" commodity groups. Wholesale price indexes are regularly released in the DBS monthly publication *Prices and Price Indexes* which contains related current series on retail and security prices. Volume 23 of that publication is a historical summary reaching back to the year 1867 for some series and, together with DBS Reference Paper No. 24, *Wholesale Prices Indexes 1930-1950*, contains an explanation of index construction and meaning.

The number and identity of commodities contained in the index has been virtually fixed since 1951 when the index was placed on a 1935-39 base. Commodities were included either because they bulked large in total marketings at that time or because they were

* Revised in the Prices Division, Dominion Bureau of Statistics.

considered reliable indicators of price change for commodity groups that did. Price movements displayed by the commodities priced are combined in such a way that they influence composite indexes in the proportions of total marketings including imports and exports during the base period.

General wholesale price indexes have been calculated by most countries for many years but the question "What does a general wholesale price index measure?" cannot be given a precise answer. A retail price index can be identified with consumer expenditure, but a general wholesale index covers a much wider range; yet it is not a measure of the purchasing power of money since it does not include prices of land, labour, securities or services, except in so far as prices of these things enter into commodity prices. As a conventional summary figure its use has tended toward a reference level against which to observe the behaviour of particular price groups such as farm products, raw materials and building materials. Thus, special wholesale groupings and commodity price relatives are now considered to be of greater importance than the general index itself.

Component indexes and individual price series have numerous uses. One of the most important is in escalator contracts which contain a price adjustment clause. Other major uses include: studies of replacement and construction costs in investment projects; analysis of price movements of both individual items and commodity groups in relation to purchases and sales; industrial planning and market analysis; valuation for tax purposes and inventory analysis; and studies in changes of physical volume. They are also used by business firms abroad in connection with sales and purchases in Canada.

The general wholesale index moved up 3.2 points or 1.4 p.c. during 1958 after falling and rising uncertainly over the year from 226.1 in December 1957 to 229.3 a year later. Thus it reached a point practically unchanged from January 1957 when it stood at 229.2. From the first of 1957 a downward tendency persisted, despite some short-lived gains in early 1958, until the autumn of that year when the index rose from 227.2 in October to 229.3 at the end of the year.

Of the five major groups showing increases during 1958, the animal products group recorded the most significant gain. Higher prices for livestock, steers, fresh meats and cured meats caused this index to rise sharply from 240.1 in January to 259.8 in May. Prices fell off between May and October but losses were largely recovered at the close of the year. The non-ferrous metals group, which dropped more than 26 points in the course of a steady decline throughout 1957 and the first seven months of 1958, regained almost ten points in the last half of the year rising from 163.0 to 172.7. Higher prices for copper, tin and zinc were the main contributors. The iron and its products group remained virtually unchanged between January and October, when higher prices for scrap iron and steel moved the index to a point about 1 p.c. above that of December 1957. The chemical products group increased also, moving gradually about 1 p.c. over the year, and in December stood at 184.5 the highest point it has reached since March 1952. Vegetable products varied within narrow limits during the year, ending up at 197.9 in December 1958, less than 1 p.c. higher than December 1957.

Lower prices for raw wool and raw cotton contributed substantially to a further downward movement in the textile products group, which had been declining steadily with few exceptions since August 1957 after having risen from 234.3 to 237.8 between January and July 1957. As a result, the December 1958 index of 227.0 was 3.8 p.c. below the previous year's average of 236.0. Non-metallic minerals moved lower between March and April but remained fairly steady in the remaining months and ended the year about 1 p.c. below the previous December index. The wood products group, recovering from lower prices experienced in mid-year, reached a level of 298.5 in December, only slightly lower than the 1957 average of 299.4.

¹ Wheat prices used in this index are Canadian Wheat Board buying prices for Nos. 1, 2 and 3 Manitoba Northern at Fort William-Port Arthur. The initial payment is first used and the index revised as further payments are announced. Between August 1945 and July 1950 the price included for No. 1 Manitoba Northern was \$1.83 per bushel. For subsequent crop years the price was as follows: 1950-51, \$1.85; 1951-52, \$1.83; 1952-53, \$1.82; 1953-54, \$1.56; 1954-55, \$1.65; 1955-56, \$1.61; 1956-57, \$1.586; and 1957-58, \$1.619. For the crop year 1958-59, the index is based on an initial payment price of \$1.40. Western oats and barley were brought under control of the Canadian Wheat Board on Aug. 1, 1949. Since then prices used for the Canadian farm products index have been initial payments to farmers, with participation payments included whenever announced.

Index Numbers of Building Materials Prices.—Price movements of materials entering into building construction are currently measured by two special-purpose series: price index numbers of residential building materials and price index numbers of non-residential building materials* for which the base years are 1935-39 and 1949, respectively. Details of weighting and construction and historical series may be found in the special bulletins† prepared at the time the indexes were first published. More recently the

* Exclusive of engineering structures such as power dams, roads, railroads and bridges.

† Price Index Numbers of Residential Building Materials 1926 to 1948 and DBS Reference Paper No. 43, Non-residential Building Materials, Price Index, 1936-1952.

composite indexes have been calculated on an annual basis back to 1913; current indexes are published monthly in DBS Bulletin *Prices and Price Indexes*.

Building material prices in 1958 were slightly lower on average than in 1957 as the annual index for residential building material prices declined from 128.4 to 127.3 and the non-residential series from 130.0 to 129.8. Compared with December 1958 indexes, however, most component groups in both series were slightly higher. The strengthening of copper prices in the second half of the year was reflected in the electrical groups. Roofing materials moved down sharply to the mid-year; in the residential series subsequent partial recovery reflected increases for cedar and asphalt shingles.

Section 2.—Consumer Price Index

The consumer price index is Canada's official measure of retail price change, the fifth in a series of Canadian index numbers of retail prices dating back to 1913. The current index was introduced by the Dominion Bureau of Statistics in October 1952 in a publication entitled *The Consumer Price Index, January 1949-August 1952*. Detailed information on such aspects of the index as purpose, family coverage, base period, items included and their relative importance, is contained in this publication. It also shows the formula used in calculating the index, outlines methods of price collection and explains special features, such as methods of incorporating seasonal variations in food consumption, and changes in the price element of home-ownership costs.

Consumer Price Index Movements.—The fourteen years of almost continuous economic growth following the end of the Second World War have experienced several distinct periods of retail price behaviour, the latest of which was in evidence throughout 1958.

The gradual relaxation of price controls in 1946 combined with consumer demands far in excess of supply brought on a period of rapidly advancing prices, so that between 1946 and 1948 the consumer price index advanced more than 25 p.c. A significant exception to these general price increases was the behaviour of rents which, continuing under some degree of control, increased only 7 p.c. in the same period.

Toward the end of 1948, production appeared to be matching consumer demands and, during the slight recession of 1949, consumer prices levelled off. Between the latter months of 1948 and May 1950, retail prices increased only slightly more than 1 p.c. However, with the outbreak of war in Korea in June 1950 came a resurgence of pressure on prices and in the course of the next 18 months, further major upward movements took place. The consumer price index rose from 102.7 in July 1950 to 118.1 by December 1951, an increase of 15 p.c. Food advanced sharply from 102.6 to 122.5 or by 20 p.c. The shelter index, based on both home-ownership and rents—the latter freed from most of the wartime controls—moved from 107.4 to 118.2 or by about 10 p.c. Clothing experienced a more substantial rise of 16 p.c. from 99.1 to 115.2. Household operation, covering such items as furniture, appliances and fuel, rose about the same degree, from 101.6 to 116.4. The wide variety of goods and services covered in the other commodities and services index followed a somewhat similar pattern, moving from 102.4 to 115.0.

The peak in consumer price levels was reached in January 1952 when the index stood at 118.2, dropping off gradually in the first half of 1952 to reach 115.9 in May, mainly as a result of a drop of about 5 p.c. in the food index. From this point a plateau in retail prices was established which lasted for four years. Over this period, the consumer price index displayed noteworthy stability, ranging narrowly from a low of 114.4 to a high of 116.9. Though the general level of prices remained almost unchanged during this lengthy period, significant variations were taking place around a stable average. Foods recorded mostly seasonal movements during 1953, 1954, 1955 and the first half of 1956. Non-food commodities experienced a decline of about 3 p.c. in a steady gradually downward movement, much of it accounted for by appliances, which moved down 17 p.c. On the other hand, rents advanced steadily to stand 13 p.c. higher in May 1956 than in May 1952. The entire group of service items also experienced continuous increases throughout this period.

From May 1956 a distinct change occurred in price patterns. A trend toward higher prices continued throughout the remainder of 1956 and the first ten months of 1957 and the total index moved up steadily from 116.6 to a new postwar peak of 123.4 in October 1957. Food, which was the component responsible for most of the upward movement

at the total index level, rose from 109.3 in May 1956 to 121.9 by September 1957. Shelter continued to advance steadily, although at a slightly moderating rate, as did other commodities and services, particularly the service elements. In contrast, clothing prices remained practically unchanged and household operation, continuing to reflect the easy price situation of major household appliances, rose only 2.8 p.c.

The most recent period of upward movement in the consumer price index which began in mid-1956 and continued throughout 1957, persisted in 1958 but with some evidence of moderating. Over the year 1958, consumer prices averaged 2.6 p.c. above the previous year, while 1957 prices were 3.2 p.c. above 1956. In the fourth quarter of 1958 consumer prices averaged 2.4 p.c. higher than in the same period a year earlier, while the fourth quarter of 1957 saw prices 2.6 p.c. above the fourth quarter of 1956.

The consumer price index rose during the first four months of 1958 from 123.4 in January to 125.2 in April. Declines in the succeeding three months brought the index back to 124.7 in July. Further increases in the second half of 1958 took the index to a high of 126.3 in November from which point it eased slightly. All five major component groups were higher in 1958 than in 1957. The largest increase, 3.9 p.c., occurred in the other commodities and services group which includes such diverse items as medical care, new passenger cars, haircuts, and theatre admissions. Food prices in 1958 averaged 3.0 p.c. above 1957 prices compared with a rise of 4.6 p.c. in 1957 over 1956. Shelter, continuing its long uninterrupted advance, was up a further 2.6 p.c. The clothing and household operation groups were both about 1.0 p.c. higher.

Table 6 provides single commodity price relatives on the base 1949=100 for a number of important foods entering into the food component of the consumer price index. It also provides a record of average prices based on the actual average level of prices prevailing in October 1952 and calculated for the other months on the basis of the price relatives.

¹ "Pork, fresh loins" prior to 1954.

Consumer Price Indexes for Regional Cities.—Table 7 gives regional consumer price indexes for ten cities or city combinations. These indexes do not show whether it costs more or less to live in one city than in another and should not be used for such comparison. Their function is to measure percentage changes in retail prices—over a certain time in each city or city combination—of a fixed basket of goods and services representing the level of consumption of a particular group of families.

7.—Consumer Price Indexes for Regional Cities 1950-58, and by Month 1957 and 1958

World Retail Price Indexes.—In order to place changes in Canadian retail prices in perspective with those occurring elsewhere, Table 8 provides retail price indexes for selected countries for 1956 and 1957. These indexes measure price change only within each country and should not be used to compare actual levels of living costs from country to country.

8.—Index Numbers of Retail Prices in Canada and Other Countries, 1955-57(Base: 1953=100. SOURCE: *United Nations Monthly Bulletin of Statistics*, November 1957 and 1958.)

Section 3.—Index Numbers of Security Prices

Investors price indexes for common stocks are calculated on the 1935-39 base and published weekly and monthly for a sample of issues, broadly classified under the headings: industrials, public utilities and banks. Within the first category the sample is further classified by industries for which indexes are available. Weekly and monthly indexes of mining stocks including both golds and base metals are calculated and published separately, as are monthly indexes of preferred stocks.

For purposes of index calculation, Thursday closing prices are used for the issues of companies listed on either or both the Montreal and Toronto stock exchanges. Weights are applied to each issue on the basis of the number of shares currently outstanding. The list of stocks included in the various security series, currently totalling 95 for the investors index and 27 for the mining stocks index, are revised annually so that issues which have become important in stock market activity may be included and those of declining interest removed. Provision is also made for stock splits, mergers and the exercise of 'rights'. The indexes are designed to reflect weekly and monthly changes of interest to the investor rather than day-to-day changes of more speculative interest. For that reason the historical record of indexes dating back to January 1914 on a monthly basis* is of significance in any analysis of the degree of fluctuation in stock prices through time.

Investors Index.—A continuation of the strong upward trend inaugurated with the inception of the bull market in December 1953 culminated in an all-time peak in the investors total index of 291.8 in August 1956; the September 1929 peak was 197.8. Subsequent sharp declines, which brought the level to 262.3 by November 1956, were reversed in December and by May 1957 losses had been largely recouped. Prices broke sharply in mid-summer, however, and by December the composite index had reacted to 216.2 for a net loss of 19.3 p.c. over the year. The index opened 1958 at 215.4, at the bottom of a seven-month downward slide from 287.6 in May 1957. Rapid recovery in subsequent months lifted the level to 262.1 by October 1958, however, and the index closed the year at 259.1. Among major groups the January-December gains were: banks 40.6 p.c. from 233.3 to 328.0, industrials 20.1 p.c. from 222.2 to 266.8, and utilities 9.9 p.c. from 178.1 to 195.8. Sub-group advances were led by milling, foods, pulp and paper, beverages, textiles and clothing, and building materials.

Mining Stocks.—Mining stocks registered major gains during 1958 as the composite index rose 29.9 p.c. from 89.4 in December 1957 to 116.1 in December 1958. Both groups shared the advance, with golds rising 34.3 p.c. from 60.0 to 80.6 and base metals 26.0 p.c. from 156.8 to 197.5.

Preferred Stocks.—The index of preferred stocks recovered from a weak close of 151.1 at the end of 1957 to record an over-all increase of 3.7 p.c. for 1958. Opening in January at 154.0, the index reached a peak of 163.9 in June and again in September, from which it receded to close the year at 159.8.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

The subject of foreign trade covers more than the treatment of imports and exports of commodities, important though this is. In its broader sense foreign trade is made up of the total international exchanges of goods, services, securities and other financial exchanges, all of which are presented in their proper relationship in this Chapter. Following Part I, which is a review of Canada's trade during recent years, Part II gives detailed statistics of external commodity trade. Part III summarizes external transactions from the standpoint of the balance of international payments. Part IV outlines the various ways in which the Federal Government promotes and encourages trade relationships, and contains a brief review of the Canadian tariff structure.

PART I.—REVIEW OF FOREIGN TRADE*

The division of labour is the basic organizing principle of the modern economy and it may be as fruitfully practised among as within nations. International specialization is a clear source of economic gain; but the character it takes varies in each country according, among other things, to resource endowment, geographical situation and political attitude. Canada has hitherto found it profitable to devote a considerable proportion of its resources to production for export and thus to rely on imports, not only to provide products that are geographically alien to the country, but also to provide the products that might have been produced at greater cost by the resources devoted to the export trade. This importance of exports and imports—which accounted for 15.2 p.c. and 16.1 p.c. respectively of the gross national product in 1958—in the Canadian economy gives Canada a great interest in external economic conditions, especially in the United States and the United Kingdom, and in international institutional arrangements which might have bearing on the value, volume, composition and direction of world trade. Thus, this review will include a discussion of the international economic situation, an outline of recent trends in Canadian trade and a brief account of a recent study of the seasonal pattern of Canadian trade.

* Prepared in the External Trade Section, International Trade Division, Dominion Bureau of Statistics.

International Developments.—Wartime planning for postwar international economic co-operation was much influenced by the experience of the 1930's and the major concern was to avoid the inter-related phenomena of widespread unemployment of resources and extreme economic nationalism. In any event, the dominant characteristic of the first postwar decade was the strength and extent of growth factors and, although considerable discrimination (especially against the dollar) was necessary in international trade in the immediate postwar years, limited liberalization of trade was an early feature of co-operation and since about 1950 the non-communist world has been moving gradually toward an extensive system of multilateral and liberal trading. The recent period has had some of the characteristics of a watershed in international economic affairs and among the more important events have been the considerable reduction in world production and trade, the widespread decline in the prices of primary commodities, the decision to increase the resources of the International Monetary Fund and the International Bank for Reconstruction and Development, the Commonwealth Economic Conference, and certain institutional changes that have taken place in Europe.

World exports declined by about 3 p.c. in volume in the first nine months of 1958 and world industrial production also declined somewhat in the same period. This contrasted markedly with the considerable increases in trade and production that took place in 1955 and 1956 and the smaller increases of 1957. The declines primarily reflected the ending of the world-wide investment boom which had followed the period of readjustment at the end of the Korean war and the consequent reduction in industrial activity in the United States, Western Europe and elsewhere. In the United States where the reduction was most strongly in evidence, the recession lasted from the third quarter of 1957 to the second quarter of 1958 and in that time the gross national product fell at an annual rate of U.S. \$16,600,000,000, or by about 4 p.c. In the second half of 1958 industrial production began slowly to recover as consumer and government expenditures strengthened further and as the rate of inventory liquidation fell; by the end of the year, although there had been no marked recovery in private investment, the volume of production had regained the pre-recession level.

In contrast to what had hitherto been widely expected, the recent recession was accompanied by a decline in the foreign trade surplus of the United States. American exports, which had been exceptionally high immediately following the Suez crisis, began to decline earlier and fell more sharply than American imports which did not decline until the beginning of 1958. Since capital movements were also favourable to the remainder of the world, the period of the recession saw a very marked outflow of gold from the United States which contrasted significantly with the inflow that had been a feature of the first three quarters of 1957. Between December 1957 and June 1958 the United States gold reserve declined by almost U.S. \$2,000,000,000 and most of the corresponding increase in reserves elsewhere was concentrated in the sterling area and Western Europe.

The levelling-off in industrial production had spread to most countries in Western Europe by mid-1958 and in some countries, notably the United Kingdom and Belgium, there had been some decline. Industrial activity slowed down for a number of reasons but in volume terms the international trade of Western Europe as a whole was relatively stable. Entirely as a result of lower prices, the value totals of exports and imports for the first three quarters of 1958 were lower than for the same period of 1957.

The recent recession in commodity prices was clearly related to the decline in industrial activity in North America and Western Europe, but growth in productive capacity, changes in stock-piling policy and changes in market structure were also important factors, especially in the non-ferrous metals. Nor should it be overlooked that not all primary commodities were similarly affected and that price changes were sometimes as much caused by local as by world conditions. Among the commodities which, for one reason or another, declined in price in 1957 and 1958 as compared to 1955 and 1953 were tea, coffee, rubber, wool (in 1958), copper, lead and zinc. Fluctuations in the value of international trade in primary products usually reflect changes in price more than changes in volume; this has serious consequences for the non-industrial countries of Africa, Asia and Latin

America, many of whom are dependent on their earnings from the export of a few primary commodities for their prospect of capital accumulation and, therefore, economic development. The importance of trade in primary products to non-industrial countries and the recent recession in the prices of these products has resulted in much study of the problems involved in maintaining an equilibrium demand. Thus a committee of experts appointed by the General Agreements on Tariffs and Trade has recently concluded that the maintenance of high levels of domestic economic growth and the avoidance of cyclical fluctuations are the most important contributions the industrial countries can make to market stability and that further progress depends upon the willingness of the industrial and non-industrial countries to negotiate on a wide range of their economic and financial policies.

It has already been pointed out that the aspiration of international economic policy in the postwar period and especially since 1950 has been the creation of a multilateral and liberal trading system. This aspiration was initially inhibited by a world-wide dollar shortage which was particularly severe in Western Europe. In the immediate postwar years any attempt at free competition between the North American economy—which had, if anything, been strengthened by the War—and the economy of Western Europe—which had been ravaged by the War—would have resulted in a permanent North American trade surplus and a permanent and ultimately crippling trade deficit for Western Europe. Thus, by general agreement, the promotion of recovery and multilateral trading within Western Europe was recognized as a prerequisite to more general liberalization. Although there is still some authoritative opinion that, mainly from structural differences between the North American and European economies, the dollar shortage is a long-run problem,* the majority belief is increasingly that the West European economy is now sufficiently competitive (as measured by the high degree of liberalization that has already taken place in trade with dollar countries) and the West European reserve position sufficiently strong to permit of further general freeing of trade and payments.

It is, of course, recognized—the more so because of the disastrously premature attempt to make sterling convertible in 1947—that since multilateral trading requires free convertibility of currencies any move toward free trade should be associated with a high degree of international liquidity. This is part of the reason for the decision taken in October 1958 to increase the resources of the International Monetary Fund and the International Bank for Reconstruction and Development. More generally, it has been felt that the world's gold and dollar reserves, which represented some 93 p.c. of the value of world imports in 1950 but only about 58 p.c. of the value of world imports in 1957, were increasingly inadequate in the face of the growing volume of international trade; and coming, as it does, at the end of what has been an active period for the IMF, the increase in resources is intended to increase the ability of the Fund to render emergency assistance to individual countries.

In December 1958 the United Kingdom, Norway, Sweden, Denmark, the Benelux countries, France, Italy and the Federal Republic of Germany announced simultaneously that their currencies had been made externally convertible, and early in January 1959 the Federal Republic of Germany announced that the convertibility of the mark had been made virtually complete. The European Payments Union (which had been an important instrument of European trade liberalization from 1950) was disbanded at the same time and replaced by the European Monetary Agreement under which inter-European settlements will probably take place mostly through the free exchange markets. External convertibility is still something short of full convertibility, in that it applies only to non-residents and to moneys earned in current transactions, and (especially for sterling) the recent announcements do little more for residents of the dollar area than formalize a *de facto* situation; but the move toward external convertibility is nevertheless noteworthy for its implicit promise of further reductions in the surviving restrictions on dollar trade and as an important step in the direction of full convertibility.

Within the general desire to establish a multilateral trading system, there has been in the postwar period a strong European desire for some form of European integration. This aspiration has complex political, social and economic roots and found its latest economic expression in the formation of the European Economic Community (EEC) which

came into being on Jan. 1, 1958, and is comprised of the Benelux countries, France, Italy and the Federal Republic of Germany. The Community is intended eventually to be a customs union in which tariffs among the participating countries will be abolished and a common commercial policy applied to countries outside the union. The six countries took the first commercial step toward the establishment of their common market at the beginning of 1959 when they accorded to each other a 10-p.c. reduction in tariff levels on a wide range of commodities and a 20-p.c. increase in total quotas. The tariff concessions have been extended on a one-year basis to all GATT countries including, therefore, Canada.

Canada has great interest in the move towards more multilateral trading and in the European developments. The existence of discrimination against the dollar is of particular concern because of its effect on the Canadian position in the Commonwealth; the European developments are of importance both in themselves and in the related proposals to associate the United Kingdom and other members of the Organization for European Economic Co-operation with the six members of the EEC. It was against this background that the Commonwealth Economic Conference was held in Montreal in September 1958. The Conference considered methods of increasing aid to the less developed members of the Commonwealth, proposed an increase in inter-Commonwealth trade (partly by reducing dollar discrimination), and foreshadowed further moves toward the convertibility of sterling.

Canadian Trade in Recent Years.—Since 1954 Canada has ranked fourth, in terms of value of total trade, among the leading trading nations of the world, following the United States, the United Kingdom and the Federal Republic of Germany. On a per capita basis, reflecting the great importance of foreign trade to the Canadian economy, Canada normally holds first or second place and in 1957 was second to Belgium and Luxembourg.

Canadian trade in recent years has largely reflected the development of the domestic economy and consequently increased very rapidly in 1955 and 1956, declined slightly in 1957 and again, to a somewhat greater extent, in 1958. In 1955 and 1956 Canadian natural resources and basic industries were developed greatly and imports, especially of iron and steel goods, rose sharply to provide the necessary equipment and to supplement scarce domestic resources. The higher volume of exports also reflected the intensive resource development and included, for example, increasingly significant quantities of iron ore, uranium and petroleum. In 1957, as foreign markets lost some of their earlier buoyancy, the creation of new capacity in the resource and basic industries was reduced; imports, especially in the iron and steel group, also levelled off but exports, as a result of mixed changes in the main groups, increased somewhat. In 1958, exports declined but little while imports were reduced by some 8 p.c. The import balance, which, reflecting the pattern and pace of Canadian economic growth, had been a record \$840,000,000 in 1956 and had declined to \$689,000,000 in 1957, was further reduced in 1958 to \$267,600,000. The gross national product was little changed in volume in 1958; as the liquidation of business inventories and the reduction in business outlays for plant and equipment were major factors in holding the gross national product close to its former levels, the reduction in imports was again most marked among iron and steel goods. The relative stability of the export total was the most remarkable feature of Canadian trade in 1958 and the high level was largely maintained by very considerable increases in a limited number of commodities, notably uranium, aircraft, wheat and beef cattle.

The aggregate increase in the exports of these four export items amounted to \$326,000,000, which was almost 7 p.c. of the export total. Uranium exports, which are made under long-term contract and mostly to the United States (although significant quantities were shipped to the United Kingdom in 1958), increased by about \$149,000,000 or about 116 p.c. Exports of aircraft, which tend from their nature to move irregularly from year to year, were up by about \$69,000,000 to a total more than one and a half times greater than in 1957—mainly because of large shipments of military aircraft to Belgium and the Federal Republic of Germany. Wheat exports, which ranked second in value among leading commodities, increased by \$66,000,000 or about 17 p.c. Higher sales in regular commercial markets, particularly the United Kingdom, contributed to the increase as did Canadian-financed shipments to India and Pakistan, shipments to the Soviet Union in part fulfillment of a trade agreement signed early in 1956, and unusually large shipments to Communist China.

2.—Summary Statistics of Canadian Trade, 1954-58

Item	1954	1955	1956	1957	1958	Change

In terms of commodity groups, exports of agricultural and vegetable products, animals and animal products, non-ferrous metals, chemicals and miscellaneous commodities were all higher in value in 1958 than in 1957. Lower export values were recorded for fibres, textiles and products, wood, wood products and paper, iron and its products and non-metallic minerals. Notwithstanding a small decline, forest products were still the largest commodity group by a considerable margin and accounted for about 30 p.c. of the total. Newsprint paper, the leading export commodity, declined by somewhat more than the group as a whole and most other leading commodities in this group, with the exception of planks and boards and shingles, also declined. Non-ferrous metals accounted for more than 20 p.c. of the export total and as a group were second in importance only to forest products. An increase of some 3 p.c. in the group total was largely accounted for by higher exports of uranium, the increase in which more than offset declines in exports of aluminum, brass, copper, lead, nickel and zinc. Agricultural products increased by about 7 p.c. and were responsible for something under 20 p.c. of the total. Increases in exports of wheat, wheat flour, barley, fruit and vegetables more than compensated for considerable reductions in the export of oil cake, vegetable oils and seeds. The increase in the export of aircraft was sufficient to raise the total of miscellaneous commodities as a whole and the higher level of cattle exports was reflected in the 32-p.c. increase in animals and animal products. A significant increase in the export of fish also contributed to the latter and was caused mainly by the combination of an unusually large catch of salmon and the removal of British quota restrictions thereon.

Among the groups that declined, the largest absolute and relative reductions were recorded for iron and steel goods and for non-metallic minerals. The decline in the iron group was widespread but was most influenced by a reduction of about one-third in the export of iron ore (by far the most important commodity in the group) and would have been greater but for an increase of some 28 p.c. in the export of farm implements and machinery. Exports of petroleum and products, the leading category among non-metallic minerals, were more than halved and this contributed greatly to the over-all reduction. In this group there were also marked declines in exports of asbestos and abrasives, and the only significant increase was in gas exported by pipeline.

Most import groups declined in 1958 as compared with 1957. The largest relative and absolute decline was recorded in iron and steel goods, which nevertheless formed the dominant group and accounted for more than one-third of all imports. Non-farm machinery, the leading import category which was responsible for about one-quarter of all iron and steel imports, was particularly affected and declined by about one-sixth as a reflection of the domestic economic situation. Other leading commodities in this group which were also significantly affected by the decline were rolling-mill products, pipes, tubes and fittings, iron ore and farm implements and machinery. Non-metallic minerals, second in importance to iron and steel goods, were reduced by around 14 p.c. mainly as a result of considerable reduction in imports of petroleum products and coal. Significant increases in fruit and cocoa imports were not quite sufficient to offset declines in the imports of other agricultural and vegetable products, particularly of sugar, coffee and rubber. The only import groups to increase in 1958 were animals and animal products, wood, wood products and paper, and miscellaneous commodities.

Imports of fibres and textiles were reduced in value mainly as a result of a fall in the imports of raw wool (which was greatly reduced in price) and wool products. Among non-ferrous metals the most significant decline was in imports of electrical apparatus, but imports of aluminum products, precious metals (except gold) and clocks and watches were also reduced. Imports of a wide range of chemical products declined and the reduction in the group total would have been greater but for an increase in imports of plastics. Of the three commodity groups for which an increase was recorded in 1958, animals and animal products, and wood, wood products and paper are not greatly significant in the import total; miscellaneous commodities, which accounted for about 10 p.c. of all imports, comprise a very heterogeneous selection. The increase in all three groups was relatively small.

The United States has long been Canada's leading trading partner and in 1958 was responsible for 64.1 p.c. of the total trade—59.1 p.c. of the export total and 68.8 p.c. of the import total; the total compared with 59.2 p.c. in 1956 and 59.6 p.c. in 1957. The United Kingdom ranks second to the United States, in 1958 accounting for 15.9 p.c. of the export total, 10.1 p.c. of the import total and 12.9 p.c. of total trade. The United Kingdom's share in total trade was somewhat higher than it had been in 1957 when the percentage was 15.0. The European share of Canadian trade was also higher in 1958 rising to 8.9 p.c. from 8.2 p.c. in 1957, but that of Latin America decreased slightly to 5.2 p.c. from 5.8 p.c. The Commonwealth share was 5.0 p.c. compared with 4.6 p.c. in 1957 and that of all other foreign countries advanced slightly to 3.9 p.c. from 3.7 p.c.

Seasonal Pattern of Canadian Trade.*—One of the more interesting and important uses of the trade statistics is as an indicator of general economic development. When the statistics are thus used the major concern is usually to ascertain whether exports and imports are in some basic sense rising or falling, but this, for periods of less than one year, may give rise to problems of judgment and statistical theory. What looks at first sight to be a change in trend may be no more than a seasonal fluctuation and a systematic attempt to follow and project trade trends is probably most efficiently made in conjunction with an equally systematic attempt to identify seasonal factors and subsequently to adjust the raw data. But problems arise, for example, because of the fact that seasonal factors do not exist in a vacuum and because there is never any guarantee that existing conditions will continue sufficiently unaltered in the future to warrant projection based on past trends. However, whatever the prospects for successful measurement of seasonal influences, their importance in Canadian trade cannot be questioned and a simple knowledge of what the seasonal pattern of Canadian trade has been in the postwar period is helpful to an understanding of the trade statistics.

Studies have been made of the seasonal pattern of Canadian trade in the postwar period (the first in 1953, the second in 1954 and the most recent in 1958), all three of them based on relatively simple statistical techniques and confined to a positive attempt to evaluate what had happened in the past. Although the latest study found some evidence of structural changes in Canadian trade (reflected, for example, in the increasing importance of exports of petroleum, iron ore, uranium and other non-ferrous metals) that may subsequently alter the seasonal pattern, it was concluded that the results of the study did reasonably well as a general indication of how the annual trade flows have been distributed among the different months and quarters in the postwar period.

The more obvious seasonal factors in Canadian trade are the importance of agricultural products, the effect of climate on transportation and other forms of economic activity, and the fact that consumer demand is regularly heavier at some times of the year than at others. On the basis of the quarterly calculations—which for a number of reasons are more reliable than the monthly averages—Canadian imports are at their lowest in the first quarter when, from difficulties of transportation and a decline in demand, they run regularly at 5 p.c. to 10 p.c. below what they would be if the annual flow of imports were distributed evenly among the four quarters. In the second quarter, with improved transportation and higher demand, imports are at their highest, at 5 p.c. to 10 p.c. above normal. Imports tend to be somewhat below normal in the third quarter and to be somewhat above normal in the fourth quarter.

Domestic exports, again reflecting the influence of transportation problems, are from 8 p.c. to 12 p.c. below normal in the first quarter, rising sharply to somewhat above normal in the second quarter as accumulated stocks are moved and accumulated demand is satisfied. They decline again in the third quarter and, because of the seasonality of some of the major export commodities and the stock-piling of goods that are expensive to move in winter, rise to between 5 p.c. and 10 p.c. above normal during the final quarter. The differences in the export and import seasonal pattern should not be overlooked in any examination of month-to-month or quarter-to-quarter changes in the balance of trade.

* A more detailed discussion of this problem is given in DBS Bulletin *Review of Foreign Trade, First Half Year 1968*.

¹ Less than \$500,000.

² Revised to include transfer of uranium ores and concentrates from Mixed Origin which were \$8,056,000 in 1954, \$26,533,000 in 1955 and \$45,777,000 in 1956.

PART II.—FOREIGN TRADE STATISTICS*

Section 1.—Explanations *re* Canadian Trade Statistics

Certain problems of procedure arise in recording trade statistics and require explanation. For the correct interpretation of the statistics of foreign trade, it is necessary that the following definitions and explanations of terms used be kept in mind:—

Quantities and Values.—In all tables of imports and exports the quantities and values are based upon the declarations of importers (import entries) and exporters (export entries), as subsequently checked by customs officials.

Imports: Valuation.—“Imports” means imports entered for consumption. “Entered for consumption” does not necessarily imply that the goods have been actually consumed in Canada but that they have passed into the possession of the importer and that duty has been paid on that portion liable for duty.

Under the main provisions of the law, the value of merchandise imported into Canada is the fair market value or price thereof when sold for home consumption in the principal markets of the country from which said merchandise was exported. (See Sects. 35 to 45 and 55 of the Customs Act.)

Canadian Exports: Valuation.—“Canadian produce” exported (domestic exports) includes Canadian products or manufactures, also exports of commodities of foreign origin that have been changed in form or enhanced in value by further manufacture in Canada, such as sugar refined in Canada from imported raw sugar, aluminum extracted from imported ore, and articles constructed or manufactured from imported materials. The value of exports of Canadian merchandise is the actual amount received in Canadian dollars exclusive of freight, insurance and other handling charges.

Foreign Exports: Valuation.—“Foreign produce” exported (re-exports) consists of foreign merchandise that has previously been imported (entered for home consumption) and is exported from Canada unchanged in form. The value of such commodities is the actual amount received in Canadian dollars exclusive of freight, insurance and other handling charges.

Countries to which Trade is Credited.—Imports are classified as received from the countries whence they were consigned to Canada. These countries are not necessarily the countries of actual origin of the goods, since goods produced in one country may be imported by a firm in another country and later re-sold to Canada. In such cases the second country would be the country of consignment to which the goods would be credited.

There is one exception to this rule. An attempt is made to classify by country of actual origin imports produced in Central and South America but consigned to Canada from the United States. The effect of this procedure, which has been in force since 1946, is to reduce slightly the imports credited to the United States and to increase those credited to Central and South American countries.

Exports are always credited to the country to which they are consigned.

Discrepancies in Trade Statistics between Canada and Other Countries.—Canada's statistics of exports are rarely in exact agreement with the import statistics of its customers and parallel differences occur with Canadian imports. Among the chief factors contributing to these discrepancies are:—

- (1) Differences in the system of valuation used by Canada and those of other countries, especially with respect to the treatment of transportation charges.
- (2) Differences in the statistical treatment of special categories of trade, such as armaments and military supplies, government-financed gift or mutual aid shipments, postal and express shipments, or warehouse trade.
- (3) Differing definitions of territorial areas.
- (4) Differing systems of geographical classification of trade, notably the consignment system used by Canada and the actual origin or ultimate destination system in use by some other countries.
- (5) Differences in the time at which trade is recorded in the statistics of partner countries caused by the time required for goods to move from one country to another.

* Based on statistics taken from reports published by the External Trade Section, International Trade Division, Dominion Bureau of Statistics.

Treatment of Gold in Trade Statistics.—The general use of gold as a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, international movements of gold are determined largely by monetary factors rather than by ordinary trade or commercial considerations. Gold is generally acceptable; it does not have to surmount tariff barriers and is normally assured a market at a fixed minimum price. Also, gold may be bought or sold internationally without any physical movements of the metal, such transactions being recognized by simply setting aside or 'ear-marking' the metal in the vaults of some central bank.

For these reasons movements of gold in a primary or semi-fabricated state are excluded from the statistics of Canada's commodity trade. However, since gold is produced in Canada primarily as an export commodity, a series showing new gold production available for export is published as a supplement to the trade statistics. Because this series is calculated on a production basis, a division of the figures into transactions with individual countries is not possible.

1.—New Gold Production Available for Export, by Month, 1950-57

NOTE.—Since Mar. 21, 1956, mines not receiving aid under the Emergency Gold Mining Assistance Act have been allowed to sell their gold to private residents and non-residents, either for export or for safe-keeping in Canada. Such sales, commencing in April 1956, are now included in the figures for new gold production available for export.

¹ Less than \$500.² Southern Rhodesia only.

The proportion of imports subject to duty varies widely between countries and geographic areas. Generally the Canadian tariff imposes duties on a greater proportion of manufactured goods than of natural products. Countries supplying chiefly manufactures to Canada tend to have duties charged on a greater proportion of their goods and also to have relatively higher average *ad valorem* rates of duty charged on their goods than is the case with countries supplying chiefly natural products. Variations in the proportion of imports dutiable as between different countries or in the average *ad valorem* rates of duty charged on imports from different countries therefore do not necessarily indicate differences in the tariff relations between Canada and these countries.

13.—Leading Imports, 1939, 1946 and 1954-57

NOTE.—Commodities are arranged in order of value in 1957.

Commodity	1939	1946	1954	1955	1956	1957
	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
Machinery (non-farm) and parts.....	42,831	120,287	380,219	445,875	628,521	631,599
Petroleum, crude and partly refined.....	39,650	89,483	212,787	229,779	271,291	305,557
Automobile parts (except engines).....	25,308	66,463	180,433	245,505	284,788	260,075
Electrical apparatus, n.o.p.....	27,891	47,788	207,539	226,715	257,292	249,328
Rolling-mill products (iron and steel).....	32,336	53,376	97,563	129,679	231,709	221,257
Pipes, tubes and fittings (iron and steel).....	2,340	8,411	59,680	50,290	123,088	147,727
Tractors and parts.....	15,003	45,620	82,814	115,375	159,627	127,658
Engines, internal combustion, and parts.....	7,096	19,650	84,914	100,917	120,986	123,870
Automobiles, passenger.....	13,725	25,209	60,846	83,726	125,539	106,596
Aircraft and parts (except engines).....	5,550	9,448	100,397	138,091	91,304	93,691
Coal, bituminous.....	19,640	77,052	70,445	74,453	96,516	90,692
Tourist purchases.....	9,487	9,125	68,767	71,467	75,205	77,849
Fuel oils.....	1,650	33,066	70,921	77,754	81,799	76,204
Sugar, unrefined.....	9,983	32,416	51,519	52,312	55,828	75,632
Farm implements and machinery (except tractors) and parts.....	5,915	22,732	60,351	62,874	72,522	74,572
Non-commercial items.....	5,430	14,173	56,763	72,929	83,098	72,328
Cotton fabrics.....	10,935	54,163	46,012	53,400	62,130	65,049
Paperboard, paper and products.....	8,654	18,834	43,558	52,690	61,954	62,027
Coffee, green.....	4,110	15,473	64,214	57,010	62,657	59,120
Principal chemicals (except acids) n.o.p.....	12,321	16,734	46,193	57,677	61,871	54,487
Parcels of small value.....	4,185	14,460	40,637	41,639	49,371	51,982
Synthetic plastics, primary forms.....	2,506	15,386	34,893	41,072	47,092	49,747
Cotton, raw.....	17,176	42,812	52,441	61,031	58,748	49,487
Apparel (except hats) of all textiles.....	6,941	12,222	33,860	39,039	44,793	47,034
Vegetables, fresh.....	6,150	25,748	33,028	38,852	43,694	41,614
Wool fabrics.....	10,408	20,115	32,367	31,948	40,191	40,938

13.—Leading Imports, 1939, 1946 and 1954-57—concluded

Commodity	1939	1946	1954	1955	1956	1957
	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
Rubber, crude and semi-fabricated.....	12,860	10,013	24,267	44,110	40,610	39,101
Bauxite and alumina for aluminum.....	3,374	8,525	20,064	21,473	24,635	38,831
Cooking and heating apparatus, and parts.....	2,332	10,462	31,557	36,324	41,717	38,265
Gasoline.....	7,998	14,912	34,564	35,831	35,217	37,184
Iron ore.....	4,179	6,467	20,416	31,563	38,722	36,387
Tools.....	2,377	10,135	23,599	26,739	32,779	36,227
Newspapers, magazines and advertising matter.....	8,436	13,434	34,067	34,794	34,435	35,727
Refrigerators and freezers.....	1,189	5,201	38,863	43,935	44,622	35,113
Citrus fruits, fresh.....	8,860	34,632	31,272	29,903	32,596	32,864
Logs, timber and lumber.....	3,767	6,035	23,995	32,773	40,555	31,582
Books, printed.....	4,238	11,272	23,891	26,035	27,950	31,468
Automobiles, freight.....	1,949	6,493	15,134	30,442	45,846	29,327
Medical, optical and dental goods, n.o.p.....	4,035	10,442	22,318	22,952	26,133	28,943
Drugs and medicines.....	3,992	9,440	25,328	25,018	26,560	28,729

14.—Leading Domestic Exports, 1939, 1946 and 1954-57

NOTE.—Commodities are arranged in order of value in 1957.

Commodity	1939	1946	1954	1955	1956	1957
	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
Newspaper paper.....	115,687	265,865	635,670	665,877	708,385	715,490
Wheat.....	109,051	250,306	375,339	338,216	513,081	380,415
Wood pulp.....	31,000	114,021	271,418	297,304	304,536	292,403
Planks and boards.....	48,829	125,391	324,724	385,313	326,445	281,681
Nickel, primary and semi-fabricated.....	57,934	55,205	182,154	215,169	222,909	248,253
Aluminum, primary and semi-fabricated.....	25,950	51,390	182,392	210,971	234,806	229,386
Copper, primary and semi-fabricated.....	52,396	34,940	127,334	163,924	194,206	162,109
Iron ore.....	43	4,353	39,719	99,814	144,443	152,281
Petroleum, crude and partly refined.....	1	—	6,318	36,253	103,923	140,975
Uranium ores and concentrates.....	..	..	8,056	26,533	45,777	127,935
Asbestos, unmanufactured.....	2,902	23,339	82,566	94,804	99,895	107,895
Barley.....	7,882	9,688	89,363	76,461	94,977	67,522
Farm implements and machinery (except tractors) and parts.....	6,975	28,662	70,819	72,206	63,937	67,239
Whisky.....	7,914	29,650	59,156	60,862	68,660	66,994
Zinc, primary and semi-fabricated.....	9,922	27,659	58,392	70,558	74,011	64,921
Flaxseed (chiefly for crushing).....	1	11	13,717	31,279	43,624	64,719
Fish, fresh and frozen.....	10,212	31,110	56,650	55,263	59,594	63,186
Wheat flour.....	16,378	126,733	88,029	74,442	71,549	61,175
Machinery (non-farm) and parts.....	11,668	16,675	38,172	35,789	47,130	57,677
Fertilizers, chemical.....	9,179	32,108	42,342	56,296	49,211	48,958
Pulpwood.....	10,901	28,731	45,766	48,655	49,794	48,459
Pigs, ingots, blooms and billets (iron and steel).....	2,691	3,328	11,212	33,695	20,749	42,226
Cattle, chiefly for beef.....	13,808	6,652	9,215	3,922	630	41,678
Non-commercial items.....	2,402	39,951	21,054	25,227	34,000	40,954
Aircraft and parts (except engines).....	347	9,507	28,442	19,906	49,545	39,910
Abrasives, artificial, crude.....	4,380	11,727	27,222	26,942	28,389	33,911
Rolling-mill products (iron and steel).....	3,864	7,528	5,393	20,313	25,719	33,043
Ships, sold.....	373	17,856	6,845	4,175	6,863	30,805
Synthetic plastics, primary forms.....	351	2,654	19,994	27,365	26,577	29,642
Lead, primary and semi-fabricated.....	9,850	16,715	40,530	37,194	35,025	29,396
Scrap iron and steel.....	1,021	166	15,868	20,936	30,427	28,620
Platinum metals, unmanufactured.....	6,178	15,450	27,640	26,315	35,656	27,821
Engines, internal combustion, and parts.....	202	1,737	16,077	17,391	17,614	26,735
Fur skins, undressed.....	14,130	30,928	22,997	28,287	25,893	25,944
Electrical apparatus, n.o.p.....	3,229	20,939	22,913	20,700	21,407	25,186
Fish, cured.....	3,884	13,908	23,341	23,939	22,835	24,513
Automobiles, passenger.....	14,394	18,093	7,723	13,165	17,027	22,629
Oats.....	4,142	23,108	32,497	11,930	9,316	22,330
Plywoods and veneers.....	1,608	12,026	21,555	30,104	29,020	22,336
Tobacco, unmanufactured.....	10,183	5,892	18,086	26,547	17,320	21,905

¹ Less than \$500.

Detailed Imports and Exports.—Detailed statistics of all commodities of any importance imported into Canada from all countries, from the United Kingdom and from the United States during the calendar years 1955-57 are given in Table 15 and corresponding statistics for domestic exports appear in Table 16.

15.—Principal Imports into Canada for Consumption from All Countries, the United Kingdom and the United States, 1955-57

NOTE.—Throughout this table certain revisions have been made in 1955 and 1956 figures since they were published in the 1957-58 Year Book. These changes, resulting from revisions in nomenclature or groupings, do not affect the totals.

¹ In this classification the expression "Canadian Farm Products" refers to all commodities produced from basic raw materials such as are produced on Canadian farms. "Foreign Farm Products" covers materials or commodities such as Canada does not produce in their original forms. e.g., cane sugar, tea, rubber, cotton, silk, etc.

² Less than \$500.

Section 6.—Comparison of Value, Price and Volume of Foreign Trade

In the postwar period there has been a substantial increase in the value of Canada's exports and imports. Changes in the value of trade, however, are the joint product of changes in the volume of goods traded and of the prices at which transactions are conducted. To assess the significance of value changes, it is desirable to isolate the contributions made to them by the price and volume factors.

Special indexes of export and import prices have been developed to provide this information. These indexes are based chiefly on unit values (average prices) calculated from the trade statistics, supplemented by information on wholesale and retail prices. Price relatives are calculated for a sample of commodities representing the greater part of export and import trade, and these relatives are weighted by the percentage of 1948 trade represented by each commodity in the sample in obtaining group and total indexes. By dividing these price indexes into the trade values the effects of price change are removed from the values, or by dividing the price index into an index of values on the same time-base an index is obtained showing changes in the volume of trade from year to year.

The grouping of commodities used in these calculations differs slightly from that of the regular trade statistics, changes being desirable to simplify the pricing problem. The chief difference is that the first two main groups of the trade statistics have been combined into one group, "agricultural and animal products", and that the sub-group "rubber and its products" has been transferred from this group to the "miscellaneous group".

The import totals differ from those usually published by the exclusion of certain goods brought into Canada by the governments of the United Kingdom and other NATO countries for the use of their defence forces. Table 23 shows the value of trade adjusted for pricing purposes, and the value, price and volume indexes of Canadian trade for 1954-57. In the period covered by this table, import prices rose steadily in 1955, 1956 and 1957. Export prices, on the other hand, increased in the earlier years but declined very slightly in 1957. Notwithstanding the increase in import prices, imports were reduced in value in 1957 as a result of a significant decline in volume; while exports increased in value in the same year, an increase in volume more than offset the small price decline.

³ Excludes exports of foreign produce.

PART III.—EXTERNAL TRANSACTIONS*

Section 1.—Canadian Balance of International Payments

Canada's total commercial and financial transactions with other countries are presented in summary form in statements of the Canadian balance of international payments. The current account statement, covering all current exchanges of goods and services, indicates the main categories of transactions giving rise to receipts from and expenditures abroad, and the extent to which these are out of balance. The capital account presents an analysis of the movements of short-term and long-term capital that have occurred during a comparable period.

Each year since 1950, with the exception of 1952, Canada's current expenditures abroad exceeded external current receipts. The current account deficits that resulted in this period of rapid Canadian development were financed by inflows of capital. Current account deficits have customarily been associated with periods of Canadian prosperity, and the rate of recent Canadian growth with the development of new resources has been once again the underlying element in the strength of Canadian demands for imported goods and services. High levels of investment at a time when defence expenditures were also very heavy, together with rising levels of consumption, contributed to the deficits. Until 1955 the deficits in recent years were not large in proportion to the high levels of total current transactions and capital inflows of a long-term type were large enough to finance the deficits in most periods. But in 1955 the current deficit rose to \$698,000,000, substantially more than the net inflow of long-term capital. In 1956, as the result of continuing high levels of investment and consumption, the deficit rose to the unprecedented peak of \$1,366,000,000; at the same time, inflows of capital in long-term forms more than tripled those of the previous year and were more than sufficient to finance the record deficit. In 1957 the deficit rose even further to \$1,400,000,000 and inflows of capital in long-term forms were almost sufficient to finance it. But, in contrast to 1956, the trend over 1957 was towards a reduced deficit and the figure for 1958, reflecting a moderation of economic activity, was substantially smaller than in the preceding years.

Current Account Transactions.—Exceptional imbalances on current account of nearly \$1,400,000,000 occurred in both 1956 and 1957. But there were significant changes in the underlying sources of the deficits, for the balance on merchandise account† fell by \$149,000,000 between the two years while at the same time there was a rise of \$183,000,000 in the deficit from non-merchandise transactions. In 1957 non-merchandise transactions contributed \$821,000,000 to the deficit on current account and merchandise transactions contributed \$579,000,000, whereas in 1956 the merchandise deficit had accounted for more than one-half of the total deficit. While the merchandise deficit has varied widely, the deficit on non-merchandise transactions has risen year by year from \$325,000,000 in 1952 to more than two and one-half times that figure in 1957.

In recent years the relative importance of exports of materials for industry, such as forest products, metals and minerals, has been increasing while the relative position of wheat and some other agricultural products has declined. In addition to new products for export, like iron ore, petroleum and uranium, there have been general increases in the productive capacity of more traditional staples like pulp and paper, nickel, aluminum and copper. While demands for some of these industrial materials weakened in 1957, demands for others increased and for the year as a whole merchandise exports rose \$72,000,000 to total \$4,909,000,000. At the same time merchandise imports fell \$77,000,000 from the levels of 1956 to total \$5,488,000,000. Exceptionally high levels of all types of imports were characteristic of both years with special emphasis on imports of investment goods and industrial materials. But general similarity between the two years conceals the

* Prepared in the Balance of Payments Section, International Trade Division, Dominion Bureau of Statistics. More detailed information is given in the annual publication *The Canadian Balance of International Payments, and International Investment Position*, and in *Quarterly Estimates of the Canadian Balance of International Payments*.

† The adjustments from commodity trade statistics to merchandise imports and exports for balance of payments purposes include a variety of non-commercial items such as settlers' effects, and bequests and donations in kind, items covered elsewhere in the balance of payments such as tourists' imports and exports, and a variety of special items including defence imports for the account of governments of other countries.

distinct changes under way in each. Whereas imports were rising rapidly in 1956, a decline occurred in 1957 which became quite pronounced by the last quarter. The highest levels were reached in the latter part of 1956 and were carried over into the early part of 1957. Details of Canada's foreign trade are covered more extensively in Parts I and II of this Chapter.

The deficit on non-merchandise transactions has continued to grow with a persistence and significance characteristic of this type of transaction for some years. The advance of nearly 30 p.c. brought the total deficit to \$821,000,000 in 1957. More than half was occasioned by net payments of interest and dividends. Tremendous growth in Canada's net international indebtedness has added significantly to net payments on income account notwithstanding the fact that some hundreds of millions of dollars of profits accruing to non-residents are each year retained in Canada for further investment. In both 1956 and 1957 total earnings, distributed and undistributed, on all non-resident-owned investments in Canada were in the neighbourhood of \$1,000,000,000.

The travel account is another which involves substantial net outlays by Canada. During both 1956 and 1957 net expenditures were approximately \$160,000,000. To these payments were added net deficits from freight and shipping transactions, and very large net payments—about \$289,000,000 in 1957—covering business services, miscellaneous income, government transactions, and remittances. Against these expenditures there were amounts available from new gold production, which in recent years have been around \$150,000,000, and a minor amount in 1957 from inheritances and migrants' transfers.

The most outstanding feature of the bilateral pattern in Canada's current account in 1957 was, as in 1956, the exceptionally large size of the deficit with the United States. In each year, current payments to the United States for goods and services exceeded receipts by well over \$1,500,000,000; this compares with much smaller deficits in earlier years, which exceeded \$1,000,000,000 in only two years before 1956. Changes in the size of this deficit between 1956 and 1957 were comparatively small with a decline in total from \$1,639,000,000 to \$1,551,000,000, mostly concentrated in the final quarter. The sources of the deficit with the United States underwent more changes than the total between the two years. The adjusted import balance on commodity account fell \$220,000,000 to \$947,000,000, while the deficit from non-commodity current transactions rose \$132,000,000 to \$604,000,000. Trends in both imports and exports contributed to the first change. The main declines in Canadian imports that occurred in the latter part of 1957 were concentrated in purchases from the United States and were particularly substantial in groups of commodities, like machinery and equipment and other metal products, which had been at very exceptional levels in the period of peak imports. In contrast, special strength in exports to the United States in a few commodities like uranium, cattle and petroleum was sufficient to raise the total exports to that country even though demand softened for some leading commodities going to the United States. The gain of \$132,000,000 in the deficit from non-commodity transactions with the United States was mainly attributed to rises of \$48,000,000 in net income remittances and \$80,000,000 in miscellaneous transactions.

With the United Kingdom there was a sharp contraction in Canada's current surplus from \$252,000,000 in 1956 to \$142,000,000 in 1957. This was a smaller surplus than in any other postwar year except 1950 and 1953. The change resulted from a reduction on commodity account of \$96,000,000 and an enlarged deficit from all other transactions, which was greater by \$14,000,000. There was a contraction of \$12,000,000 in the surplus with other overseas countries, which fell to \$9,000,000 in 1957.

Capital Movements.—Capital investment in Canada for the year 1957 was even higher than the unprecedented levels of 1956. Total private and public capital formation rose by more than 9 p.c. (compared with 28 p.c. in 1956), and amounted to 28 p.c. of the gross national product (compared with 27 p.c. in the previous year). In both years Canada drew substantially on the resources, real and financial, of the remainder of the world.

The inflow of capital for direct investment in foreign-controlled establishments during 1957 was placed at \$520,000,000. Transactions in Canadian securities led to a further inflow of \$747,000,000, including \$175,000,000 of equities. These two groups of trans-

actions added \$1,267,000,000 to Canadian external liabilities in long-term forms. On the long-term assets side, there were outflows of \$65,000,000 for direct investment abroad, but inflows of \$19,000,000 and \$50,000,000 respectively occurred from transactions in foreign securities and repayments on inter-governmental loans. Transactions in all these and other long-term forms led to a net capital import of \$1,307,000,000 which was sufficient to finance more than 93 p.c. of the current account deficit; the corresponding inflows of \$1,423,000,000 in 1956 were 4 p.c. greater than the deficit in that year. Including inflows from a reduction in official holdings of gold and foreign exchange, offset to some extent by a reduction of holdings of Canadian dollars by non-residents, other capital movements led to a net capital inflow of \$93,000,000 in 1957.

The movement of capital in long-term forms from the United States was practically the same in 1957 as in 1956, but the movement from the United Kingdom and other overseas countries fell by some 20 p.c. and the share of the United States rose from about 68 p.c. to 73 p.c.

Inflows of capital for direct investment in foreign-controlled enterprises have dominated the capital account of the Canadian balance of payments in most of the postwar years. These persistent and substantial receipts have been directed particularly to resource development and associated industries. By far the largest part of the new capital has gone into the petroleum and natural gas industry which has been one of the great dynamic developments in the Canadian economy since the 1940's. Substantial amounts have also gone into other mining industries, particularly for the development of iron ore, and to various branches of manufacturing.

Although the inflow for direct investment has been the dominant feature of postwar capital movements, it has been dwarfed since 1956 by the inflow of portfolio capital. This arose in part from substantial sales of outstanding Canadian stocks as the non-resident investor added to his stake in Canadian growth. The largest factor in the increase, however, has been the voracious demands in the Canadian capital market, some of which have been diverted to foreign capital markets through the sale to non-residents of new issues of Canadian bonds and debentures. Corporations, provincial governments and municipalities have all been important borrowers abroad in recent years.

Comments and statistics on the effects of the unprecedented capital inflows of recent years upon the ownership of investments in Canada will be found in the Section on Canada's International Investment Position in Chapter XXIII.

Section 2.—Travel between Canada and Other Countries

During 1957 new records were established in the number of visits to Canada by residents of other countries and the number of visits to other countries by residents of Canada; however, the expansion of travel to other countries by Canadians was the more moderate. Visits to Canada by residents of other countries numbered 28,656,000, a substantial gain over the 27,700,000 visits recorded in 1956. Canadians reciprocated with 27,329,300 visits to other countries in comparison with 27,200,000 in 1956. The total of all travel amounted to 55,985,300 visits as compared with 54,900,000 in 1956, an increase of about 2 p.c.

Nearly 1,000,000 more persons visited Canada in 1957 than in 1956. Entries direct from overseas countries increased by 6,000 and visits by residents of the United States by 952,900. Travel to other countries by Canadians, however, levelled off during 1957. Re-entries of Canadians returning from visits to the United States were up by 132,700 or about 0.5 p.c. and re-entries direct from overseas advanced 13,800 or 13 p.c.

Estimates of receipts and payments were also higher. Visitor expenditures in Canada advanced from \$337,000,000 in 1956 to \$363,000,000 in 1957, visitors from the United States contributing \$325,000,000 and residents of overseas countries \$38,000,000. Payments for travel in other countries advanced by approximately the same amount, from \$498,000,000 in 1956 to \$525,000,000 in 1957. During 1957 Canadians spent \$403,000,000 on travel in the United States and \$122,000,000 on travel to overseas countries, the deficit amounting to \$162,000,000 compared to \$161,000,000 in 1956.

Travel by Residents of the United States in Canada.—Contrary to the trend of 1956, most of the increase in receipts from United States residents travelling in Canada in 1957 appeared in the non-automobile classifications. A comparison of the two years shows that the \$173,467,100 spent by visitors using automobiles for transportation in 1957 was \$834,400 higher than in 1956, a gain of 0.5 p.c. On the other hand, persons using other than automobile transportation spent \$151,848,900 in 1957 compared with \$136,725,500 in 1956, an increase of 11 p.c. These latter persons accounted for 47 p.c. of the total receipts in 1957 and 44 p.c. in the previous year.

Special surveys conducted in 1955, 1956 and 1957 have given additional information regarding travel by United States residents entering Canada on vehicle permits. In 1957, 128,000 questionnaires were mailed to such persons who had visited Canada during the year, 31 p.c. of which were completed and returned. About 15 p.c. of the questionnaires returned were completed by persons reporting on their first trip to Canada. Trips by United States residents had, of course, a variety of purposes; 64 p.c. of those lasting for three days or longer were for recreation, 26 p.c. were for visiting relatives or friends, 7 p.c. were for business, 2 p.c. for shopping, and a few for education and other purposes. There was considerable seasonal variation in the purpose of visits. In the third quarter of the year about 75 p.c. were for recreation compared with 42 p.c. in the first quarter, 47 p.c. in the second quarter and 45 p.c. in the fourth quarter. Persons visiting friends or relatives were more evenly distributed throughout the year, but seasonal variations were quite pronounced for business trips. About 16 p.c. of the travellers in the first and second quarters of the year were on business, 3 p.c. in the third quarter and 12 p.c. in the fourth.

The survey showed that in 1957 about 77 p.c. of the persons reporting were adults, compared with 74 p.c. in 1956. On a seasonal basis there was a much higher proportion of children among the visitors in July, August and September, the vacation months. In the first quarter of the year, 80 p.c. of the visitors were adults, in the second quarter 88 p.c. and in the fourth quarter 83 p.c. Provincially, the percentage of children was highest among visitors to Manitoba and lowest among those to Nova Scotia.

The motel or motor court was the most popular type of accommodation for automobile travellers, serving nearly 30 p.c. of the visitors reporting in 1957; 23 p.c. stayed with friends or relatives, 21 p.c. at hotels and the remainder at cottages, camping grounds, tourist homes and so on. Considerable seasonal variation appeared also in type of accommodation reported. More visitors stayed in hotels during the winter months, the proportion being at its minimum in the third quarter of the year. The proportion of visitors depending on friends or relatives was also at its minimum in the third quarter. Motels on the other hand were less frequented in the first and last quarters of the year, reaching their maximum of popularity in the third quarter, at the same time as camps, cottages,

tourist homes, etc. More persons travelling in Canada on business used hotels than all other types of accommodation combined. Persons on recreation were more diversified in their choice—between 36 and 37 p.c. stayed in motels, 23 p.c. in hotels, 21 p.c. in cottages and the remainder in other accommodation. Most visitors to friends or relatives stayed in homes but 19 p.c. stayed in motels and hotels and a few in other types of quarters. It is interesting to note that hotels or resorts in the Province of Quebec provided accommodation for a higher percentage of motorists than any other province, and such accommodation in New Brunswick served the lowest proportion of visitors entering that province. A higher percentage of travellers entering through Nova Scotia stayed in tourist homes than of those entering through other provinces; with the exception of Alberta, tourist homes were unimportant in providing accommodation in the western provinces. Cottages were more popular in Ontario than elsewhere and the proportion of persons camping was highest in Alberta and British Columbia. A higher percentage stayed with friends or relatives in Saskatchewan than in other provinces but few of those entering Alberta were thus served.

United States visitors who stayed two days in Canada during 1957 travelled an average of 237 miles; those respondents staying three or more days averaged 697 miles although this varied somewhat according to the season of the year, the maximum appearing in the third quarter. Persons entering for shopping travelled an average of 318 miles, those coming on business averaged 661 miles, those on recreation 725 miles and those visiting with friends or relatives 490 miles. Milage in Canada was also influenced by the province of entry and destination. Travellers destined to points within the province of entry averaged 537 miles and those entering one province but proceeding to destinations in another averaged 1,442 miles.

Since a high percentage of the one- and two-day visitors would remain within the province of entry, information on destination was restricted to persons staying three or more days. For the year as a whole, about 82 p.c. of the visitors remained in the province of entry although there was some seasonal variation. Motorists were more inclined to travel beyond the province of entry in the vacation months of July, August and September. Table 8 gives the percentage distribution of province of destination classified by province of entry into Canada.

8.—Average Milage Reported by Motorists from the United States, by Province of Destination and of Entry, 1957

NOTE.—Information reported on special survey questionnaires (see text p. 1029) by travellers remaining in Canada three or more days.

¹ Includes vehicles destined to Yukon Territory.

A classification of expenditures showed that in 1957 between 31 and 32 cents of each dollar went for foods and beverages, 23 cents for lodging and 16 cents for transportation. Some 7 cents of the travel dollar went for handicrafts and souvenirs, 12 cents for other merchandise and about 10 cents for reasons not specified.

Canadian Travel in the United States.—Canadian travel to the United States reached an all-time record in 1957 although the rate of expansion was moderate when compared with that of the two previous years. An increase of 4 p.c. during the first half of the year of the corresponding period of 1956 tapered off considerably in the following three months and in the period October to December there were actually 377,800 fewer re-entries than in the same period of 1956, a decline of more than 6 p.c. For the year as a whole, short-term travel by Canadians in the United States declined slightly but long-term travel increased by nearly 4 p.c., or by approximately 156,600 visits. In recent years the expansion of Canadian travel to the United States has been more noticeable in the winter months.

Residents of Canada spent a record \$403,000,000 on travel in the United States in 1957, a 3-p.c. increase over the previous high attained in 1956. Approximately \$8,000,000 of the additional \$12,000,000 was accounted for by long-term travellers, who spent an average of \$77.84 per visit in the United States during 1957 as compared with \$78.79 per visit in 1956. Short-term expenditures averaged \$2.54 per visit during 1957 as compared with \$2.37. Altogether, Canadians spent an average of \$14.81 on each visit to the United States during 1957, between 2 and 3 p.c. higher than the average of \$14.44 shown in 1956. On a per capita basis, residents of Canada spent \$24.21 per person on travel in the United States during 1957, an amount practically unchanged from that of the previous year. This represents a higher figure than the average per visit since, besides the effect of commuters, there are many Canadians who make several trips to the United States in a year. Canadian averages are much higher than the corresponding rates for United States visitors to Canada.

Included in the amount spent by Canadians in the United States are the purchases of merchandise while travelling. Declarations made under the \$100 customs exemption privilege totalled \$74,000,000 in 1957, an increase of \$1,400,000 or about 1 p.c. compared with the previous year. The proportion of the Canadian travel dollar being used for the purchase of merchandise by Canadians while travelling in the United States has gradually

diminished during the past few years. In 1957 about 18 p.c. of the expenditures in the United States went for the purchase of merchandise compared with 19 p.c. in 1956 and 1955, nearly 21 p.c. in 1954, and about 23 p.c. in 1953.

***Travel between Canada and Overseas Countries.**—Travel between Canada and overseas countries continued to expand in 1957 but the pattern was somewhat changed from the previous year. Visits to Canada by residents of overseas countries increased 17 p.c. as compared with 10 p.c. in 1956, while re-entries by residents of Canada returning from visits overseas advanced about 14 p.c. compared with 19 p.c. in the previous year. Non-resident visitors (other than immigrants) arriving in Canada direct from overseas countries through Canadian ports of entry numbered 36,600, an increase of approximately 6,000 over 1956. In addition, an estimated 25,000 arrived via the United States, an increase of around 3,000. Thus the number of entries direct and by way of the United States amounted to 61,600, a gain of 9,000 over the previous record of 1956.

In 1957, about 19,000 of the visitors direct from overseas countries arrived by aircraft, representing nearly 52 p.c. of the total compared with 46 p.c. in the previous three-year period. Economy flights and improved air service are no doubt an influence in this trend toward air travel. There was also a definite expansion in the use of Canadian carriers for oceanic transportation by residents of other countries in 1957. Between 42 and 43 p.c. of the visitors travelling direct from overseas countries arrived on Canadian air and steamship facilities as compared with 36 p.c. in 1956 and 33 p.c. in 1955. It is altogether probable that much of the transportation expenditure by visitors from overseas countries arriving via the United States goes to foreign carriers.

Residents of the United Kingdom account for more than half of the visitors entering Canada direct from overseas but the proportion of the total originating there declined from 57 p.c. in 1955 to 55 p.c. in 1956 and to less than 54 p.c. in 1957. The proportion originating in other Commonwealth countries remained fairly constant during the three years at from 12 to 13 p.c. The proportion from European countries other than the United Kingdom was somewhat higher in 1957 at 27 p.c., and the number originating in other countries remained unchanged at 7 p.c.

An estimated \$38,000,000 was received from residents of overseas countries, a record amount 36 p.c. above the total for 1956; in 1956 and 1955 the corresponding rates of expansion over the previous year were 12 p.c. and 14 p.c. respectively. Included in the receipts are amounts paid to Canadian carriers covering transportation fares between Canada and overseas countries. In 1957 transportation earnings amounted to over one-half the total receipts in this category.

A record was also established in the number of visits to overseas countries by residents of Canada. Canadians returning direct from overseas countries numbered 119,900, a gain of about 13 p.c. over 1956; the rate of increase had been around 20 p.c. each year since 1953. Re-entries direct to Canada were supplemented by an estimated 39,000 who returned via the United States making a total of 158,900, a gain of 19,800 visits in the aggregate or 14 p.c. over the previous year.

Survey information reported by persons returning direct to Canada from visits overseas revealed that about 36 p.c. of such travellers visited the United Kingdom only and between 31 and 32 p.c. visited the United Kingdom and other European countries compared with 33 p.c. in 1956. Visits to European countries other than the United Kingdom increased to 15 p.c. of the total from 12 p.c. the previous year, visits to the British West Indies were unchanged at 4 p.c., visits to Mexico declined from 5 p.c. in 1956 to 4 p.c. in 1957 and to Bermuda from 4 p.c. to 3 p.c. Visits to Hawaii were unchanged at 3 p.c. Less than 1 p.c. visited each of the following areas: Central America and the non-British West Indies, South America, Australia and New Zealand.

Destinations reported by Canadians returning direct to Canada varied considerably according to season. Travel to Europe accounted for 94 p.c. of the destinations reported in the third quarter of 1957 as against about 59 p.c. in the first quarter of the year, 73 p.c.

in the second quarter and 87 p.c. in the last quarter. Percentagewise, travel to the British West Indies, Mexico and Hawaii was heaviest in the first quarter of the year when 11 p.c. of the travellers reported visits to the British West Indies, between 11 and 12 p.c. to Mexico and 8 p.c. to Hawaii. Travel to these areas was at a minimum in the third quarter of the year. The first and second quarters of the year attracted more visitors to Bermuda which was given as destination by between 4 and 5 p.c. and 7 p.c. respectively of the respondents. Destinations reported by Canadians returning from overseas via the United States followed a different pattern. On a percentage basis, more persons had visited Bermuda, the British West Indies, Mexico, Central America and Hawaii the shortest route to which destination is through the United States.

It is of interest to note that approximately 42 p.c. of the travellers returning direct from overseas countries had gone to visit friends or relatives in 1957 as compared with 37 p.c. in 1956. Between 40 and 41 p.c. travelled for recreational purposes, a slight decline from 1956. About 11 p.c. travelled overseas on business, 4 p.c. for education and just over 2 p.c. for purposes of health.

Between 73 and 74 p.c. of Canadian visitors to the United Kingdom and nearly 58 p.c. of the travellers to other European countries went to visit friends or relatives. Nearly 46 p.c. of the travellers visiting both the United Kingdom and other European countries were for recreational purposes, 27 p.c. went to visit friends or relatives, and about 18 p.c. were on business. Approximately 73 p.c. of the travellers returning from other Commonwealth countries (mainly Bermuda and the British West Indies) had been on vacation, 13 p.c. went to visit friends or relatives and 5 p.c. for reasons of health. Business trips to other Commonwealth countries in 1957 accounted for more than 7 p.c. of the trips to these areas compared to 4 p.c. in 1956. Some 87 p.c. of the visits to Hawaii and 81 p.c. of the visits to Mexico were for recreation. Business trips took 21 p.c. of the visitors to Central America and between 22 and 23 p.c. of the visitors to South America. About 23 p.c. of the visitors to Central America and 29 p.c. of those travelling to South America reported visiting friends or relatives. Recreation attracted nearly 53 p.c. of the visitors to Cuba and Puerto Rico but only 39 p.c. reported this reason for travelling to South America. About 59 p.c. of the Canadian travellers returning from overseas countries via the United States reported recreation as the purpose of trip, 22 p.c. had gone to visit friends or relatives and 12 p.c. travelled on business.

Expenditures of Canadians in overseas countries reached a record \$122,000,000 in 1957, a gain of \$15,000,000 over 1956. This 14-p.c. increase may be compared with the 24-p.c. gain recorded in 1956 over 1955. For the first time since 1951 receipts from overseas visitors recorded a greater percentage gain than the travel payments to overseas countries but the debit balance between receipts and payments stood at \$84,000,000, the highest on record. The debit balance in the overseas account amounted to more than half of Canada's deficit on travel account in 1957.

Tourist Information.—Tourist information generally is supplied by the Canadian Government Travel Bureau, Ottawa, and detailed information on the National Parks and Historic Sites is available from the Department of Northern Affairs and National Resources, Ottawa. For advice regarding specific provinces or particular cities or resorts, application should be made to the provincial or municipal Bureau of Information concerned.

PART IV.—THE GOVERNMENT AND FOREIGN TRADE

Section 1.—Foreign Trade Service and Associated Agencies concerned with the Development of Foreign Trade*

Foreign trade contributes substantially to the welfare and prosperity of Canadians, largely because the productive capacity of Canada is greater than the ability of its population to consume the output of farms, factories, forests, fisheries and mines. Every effort

* Prepared in the several Branches and Divisions concerned and collated in the Trade Publicity Branch, Department of Trade and Commerce, Ottawa. The work of the Standards Branch and the Small Business Branch of the Department, which are concerned with domestic matters only, is dealt with in the Domestic Trade Chapter, pp. 940-942.

is made, therefore, to establish and maintain close commercial relations with other countries whose markets are essential to the Canadian economy. It is appreciated, however, that two-way trade should be encouraged in order that goods and services may be accepted in partial payment for the products Canada is in a position to export. Furthermore, many commodities that are not indigenous to this country must be imported. Some of these are required for industrial processes and others may be classed as consumer goods necessary for the maintenance of the Canadian standard of living.

Although many private firms have established connections in other countries that enable them to maintain a steady flow of goods in either direction, others require the assistance of government agencies in finding markets or sources of supply. Import and export controls imposed by many countries for a variety of reasons, together with postwar foreign exchange difficulties, present problems that no single firm or even an association of manufacturers, exporters or importers can solve without assistance from government representatives.

The Department of Trade and Commerce and associated agencies are at the disposal of exporters and importers engaged directly in the development of Canada's commercial relations with other countries. Services obtainable from the various branches, divisions and agencies are described below.

Agriculture and Fisheries Branch.—The main functions of this Branch include: (1) trade promotion relating to agricultural and fisheries products; (2) the programming, receiving and distributing of information on foreign agriculture and fisheries; and (3) acting as a focal point for liaison on agricultural and fisheries trade matters with the Department of Agriculture, the Department of Fisheries, the Canadian Wheat Board, and other government departments and boards.

In the field of trade promotion, the Grain Division, the Food and Agriculture Division and the Fisheries Division assist Canadian exporters of agricultural and fisheries products in finding markets in other countries. Canadian firms are supplied with information concerning market conditions and requirements in foreign markets, competition from other sources of supply, exchange and tariff restrictions and other related information. Trade Commissioners are kept fully informed on such matters as production and price trends in Canada, quantities of commodities available for export and sources of supply.

The Grain Division assists foreign governments and other buyers in the purchase of Canadian wheat, flour and other cereals. Close contact is maintained with the flour millers as well as daily liaison with the Canadian Wheat Board.

The Commodity Officers concerned with livestock and livestock products, plant products, confectionery, fish and fisheries products keep in contact with the trade and trade organizations dealing with these commodities. They are in close touch with the officers of other departments of government concerned with the disposition of Canadian production surplus to domestic requirements, and those responsible for such items as health standards, grading and inspection.

A great deal of information pertaining to foreign agriculture and fisheries is received from the Canadian Trade Commissioners. This material, which reflects foreign government policy, production trends and market information, is processed in the Branch and distributed to the departments of government concerned and others interested. Much of it is published in *Foreign Trade*. The Trade Commissioner Service includes a number of officers who deal specifically with agricultural and fisheries matters. Some of these officers are located in Canada's most important export outlets and others in those countries with which Canada competes on world markets, particularly in such commodities as wheat, coarse grains, livestock, meats and dairy products. The information received from the agricultural officers and other Trade Commissioners on foreign agricultural developments is distributed in Canada through publications issued by the Economics Division of the Department of Agriculture and by direct communication with producers and exporters. Fisheries information from abroad is passed immediately to the Department of Fisheries, the provincial departments concerned, the Fisheries Council, and to fish exporters.

Canadian Government Exhibition Commission.—The Canadian Government Exhibition Commission publicizes Canada by graphic media of all kinds and helps to sell Canadian products abroad. The Commission is solely responsible for the construction and administration of Federal Government exhibits at international expositions, trade fairs and displays outside Canada and of international trade fairs in Canada sponsored by the Government of Canada. The Commission is equipped to advise individual Canadian companies in the preparation of exhibits.

Commodities Branch.—The principal role of the Commodities Branch is active trade promotion but it also has important administrative responsibilities. In trade promotion, the Branch provides liaison with industry and the business community in Canada, and passes on information about trade opportunities brought to light by the Department's activities at home and abroad.

The Branch contains commodity specialists organized in six divisions: Engineering and Equipment, Minerals and Metals, Forest Products, Chemicals, Consumer Goods and Transportation and Trade Services. Within these divisions, individual commodity specialists are concerned with such particular groups of products as engineering services and plant equipment, electrical and electronic equipment and transportation equipment, ferrous and non-ferrous metals, lumber, pulp and paper, chemicals and petroleum products and leather and rubber, as well as a very wide range of consumer products. Commodity officers visit plants, attend the meetings of business associations, prepare trade studies and market surveys, and arrange for displays of Canadian goods abroad for the purpose of introducing them in foreign markets. It is the function of the commodity specialist to direct attention of Trade Commissioners to changes in supply conditions and to products available for export, and to relay market news received from Trade Commissioners to Canadian manufacturers and exporters.

The Branch is concerned with the administration of the Export and Import Permits Act, being particularly active in the export control field; here, among other things, it gives continuing attention to Canada's part in international arrangements for control of strategic materials. Additionally, it is responsible for the administration within Canada of the U.K. Token Import Scheme and the West Indies Liberalization Plan. It also acts as a source of commercial intelligence and provides gathering, collating and distributing information that is essential to the operation of other branches of the Department.

Economics Branch.—The Economics Branch maintains a continuous review of business conditions in Canada and conducts special studies on particular industries or on any aspect of Canada's economic development as required. Aspects of the general economic situation considered include foreign trade, investment, consumption, production, prices, incomes and employment, as well as conditions in industries and localities.

Energy Studies Branch.—This Branch follows developments relating to Canadian energy sources, prepares studies and gives advice on particular problems as they arise. The effects of United States oil import restrictions on the Canadian oil industry, Canadian gas export policy, and planning and negotiation related to co-operative international development of the Columbia River basin, are examples of the specific areas currently of interest to the Branch.

Export Credits Insurance Corporation.—The Export Credits Insurance Corporation was established under the provisions of the Export Credits Insurance Act 1944 (amended in 1946, 1948, 1954 and 1957). The Corporation, which is administered by a Board of Directors including the Deputy Minister of Trade and Commerce, the Deputy Minister of Finance and the Governor of the Bank of Canada, insures persons carrying on business in Canada against risks involved in the export, manufacture, treatment or distribution of goods or the rendering of engineering, construction, technical or similar services. The main risks covered include: insolvency or protracted default on

the part of the buyer; exchange restrictions in the buyer's country preventing the transfer of funds to Canada; cancellation of an import licence or the imposition of restrictions on the importation of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc., in the buyer's country.

The insurance is available under three main classifications: general commodities, capital goods, and services. Coverage for general commodities may be procured by exporters under two types of policies: the Contracts Policy, which insures an exporter against loss from the time he books the order until payment is received; or the Shipments Policy, obtainable at lower rates of premium and covering the exporter from the time of shipment until payment is received. These policies are issued on a yearly basis, covering exporters' sales to all countries.

Insurance of capital goods offers protection to exporters dealing in plant equipment, heavy machinery, etc., where extended credit for lengthy periods is often necessary. Specific policies are issued for transactions involving capital goods but the general terms and conditions are the same as those applicable to policies for general commodities. Specific policies are also issued to cover engineering, construction, technical or similar services contracts entered into between Canadian firms and persons in foreign countries who have agreed to purchase such services.

The Corporation insures exporters on a co-insurance basis up to a maximum of 85 p.c. of the gross invoice value of shipments. This co-insurance basis also operates in the distribution of recoveries obtained after payment of a loss, and these recoveries are shared by the Corporation and the exporter in the proportions of 85 and 15 p.c., respectively.

The Corporation, from its inception to Dec. 31, 1957, insured export sales valued at \$422,000,000. Premium income was \$3,762,223 and gross claims paid to exporters during the same period amounted to \$9,431,017. Most of these claims resulted from exchange transfer difficulties, relatively few arising from insolvencies. Recoveries made amounted to \$6,141,409. The balance at credit of the underwriting reserve as at Dec. 31, 1957, was \$2,437,501.

Industrial Development Branch.—This Branch co-ordinates the assistance offered by the Federal Government in the establishment of new industries in Canada. Acting in this capacity, information is provided on a multiplicity of matters pertaining to industry establishment. The Branch assists also in solving the variety of problems encountered by Canadian and foreign businessmen. It also aids those established firms that wish to expand into new lines of production. Inquiries from foreign firms and individuals regarding the manufacture of products in Canada under licence or royalty are screened and brought to the attention of Canadian manufacturers interested in producing additional items.

The Branch acts in an advisory capacity to the Immigration Branch of the Department of Citizenship and Immigration regarding the admission of individuals, other than those from Commonwealth countries, who wish to establish new industries in Canada. It also works in close co-operation with a widespread network of organizations throughout Canada, including industrial development departments of the provinces, municipalities, railways, banks, power companies, chambers of commerce, boards of trade, and the Canadian Manufacturers' Association.

International Economic and Technical Co-operation Division.—The administration of Canada's participation in the Colombo Plan, the Canada-West Indies Bilateral Aid Programme and the Canada-Ghana Bilateral Aid Programme, is the responsibility of this Division. These plans and programs are a co-operative effort to help raise the standards of living of the people and the economic potential of the countries in the areas concerned. Contribution is of two types—capital assistance and technical co-operation. Capital assistance grants for goods and services are made on a government-to-government basis, while technical co-operation embraces the training, in Canada, of selected *trainees* in the various fields of endeavour, and the sending of Canadian *experts* to advise and instruct in the countries participating. The Division also assists the United Nations and its

Specialized Agencies in the recruiting of technical experts and in the arrangement of courses of instruction for UN trainees sent to Canada for study. For the year ended Mar. 31, 1958, \$34,400,000 was voted by Parliament for the Colombo Plan, making a cumulative total of \$196,670,000 and, as a first contribution to the other aid programs, \$150,000 was voted for joint use in providing assistance to the West Indies and Ghana.

International Trade Relations Branch.—This Branch deals with a wide variety of current trade issues, ranging from the analysis of developments in international commercial relations to assisting in the re-opening of dollar markets for Canadian products and to finding practical solutions for tariff and other difficulties encountered by Canadian exporters. The Branch has under constant review Canada's trading relations with other countries, and participates in conferences and negotiations under the General Agreement on Tariffs and Trade. In addition, the Branch is concerned with the effects of the work of such international organizations as the Organization for European Economic Co-operation on Canadian and world trade.

Trade treaties are under continuous examination by the Branch, which is responsible for the preparation of material for trade and tariff negotiations with other countries. Material is collected on foreign tariffs, customs legislation, taxes affecting trade, import licensing, exchange regulations, documentation, sanitation, marking and labelling requirements, and measures pertaining to quotas, embargoes and other import restrictions. These data are analysed, interpreted, clarified and made available in easily comprehensible form to exporters, government officials and other export interests.

Exporters who encounter difficulties resulting from the trade policies or regulations of other countries are given expert advice and interpretation of foreign regulations. Also, the Branch initiates official consultations with other governments respecting such problems.

Trade Commissioner Service.—The Canadian Trade Commissioner Service is one of the important instruments in the continuous effort to increase Canadian international trade, to give world-wide distribution to Canadian products and to locate the best sources of supply for imports. Headquarters are at Ottawa, and 59 offices are maintained in 45 countries, staffed with trained Canadian trade officials and commodity specialists. The work of the Trade Commissioners in the field is co-ordinated in Ottawa by five Area Trade Officers. These Officers are familiar with every aspect of foreign trade in their geographical or political areas and are responsible to the Director of the Service for the collection, preparation and presentation of information on all trade matters in their respective territories.

Trade Commissioners bring together exporters and importers of Canada and other countries. They study potential markets for specific Canadian products and report on the exact kind of goods in demand, prices, competitive conditions, trade and exchange regulations, tariffs, shipping and packaging requirements, labelling, etc. Inquiries for Canadian goods are forwarded to the Department at Ottawa or directly to interested Canadian firms. For Canadian importers, Trade Commissioners seek sources of supply of a wide variety of goods. The preparation of economic and other reports for departmental use is an important activity for the Trade Commissioner. Assistance is given to Canadian exhibitors at overseas trade fairs and constant liaison is maintained with the trade departments of foreign governments.

In countries where Canada maintains a diplomatic mission and a trade office, Trade Commissioners form an integral part of the mission and assume the title of Commercial Counsellor or Commercial Secretary. In some foreign countries they act as Consuls General, Consuls or Vice-Consuls, according to their status as Foreign Service Officers.

In order to provide Canadian manufacturers, exporters and importers with up-to-date information concerning their territories more effectively than is possible by correspondence, tours of Canadian industrial centres are arranged from time to time for Trade Commissioners. Such direct contacts enable specific problems to be discussed and at the same time serve to bring into focus for the Trade Commissioner the Canadian industrial picture as a whole.

CANADIAN FOREIGN TRADE OFFICES ABROAD, AS AT JAN. 1, 1959

- ARGENTINA.—Commercial Counsellor, Canadian Embassy, Bartolome Mitre 478, Buenos Aires.
- AUSTRALIA.—Commercial Counsellor for Canada, 7th Floor, Berger House, 82 Elizabeth Street, Sydney, N.S.W.
Commercial Counsellor for Canada, 83 William Street, Melbourne.
- AUSTRIA.—Commercial Secretary for Canada, Opernringhof, Opernring 1, Vienna 1. Territory includes Czechoslovakia and Hungary.
- BELGIAN CONGO.—Canadian Government Trade Commissioner, Forescom Bldg., Leopoldville 1. Territory includes Angola and French Equatorial Africa.
- BELGIUM.—Commercial Counsellor, Canadian Embassy, 35 rue de la Science, Brussels. Territory includes Luxembourg.
- BRAZIL.—Commercial Counsellor, Canadian Embassy, Edificio Metropole, Av. Presidente Wilson 165, Rio de Janeiro.
Consul and Trade Commissioner, Canadian Consulate, Edificio Alois, Rua 7 de Abril 252, São Paulo.
- CEYLON.—Commercial Secretary, Office of the High Commissioner for Canada, 6 Gregory's Road, Cinnamon Gardens, Colombo.
- CHILE.—Commercial Secretary, Canadian Embassy, 6th Floor, Av. General Bulnes, 129, Santiago.
- COLOMBIA.—Commercial Secretary and Consul, Canadian Embassy, Edificio Banco de Los Andes, Carrera 10, No. 16-92, Bogota. Territory includes Ecuador.
- CUBA.—Commercial Secretary, Canadian Embassy, Edificio Ambar Motors, Avenida Menocal 16, Havana.
- DENMARK.—Commercial Counsellor, Canadian Embassy, 4 Trondhjems Plads, Copenhagen. Territory includes Greenland and Poland.
- DOMINICAN REPUBLIC.—Commercial Counsellor, Canadian Embassy, Edificio Copello 408, Calle El Conde, Ciudad Trujillo. Territory includes Puerto Rico.
- FRANCE.—Commercial Counsellor, Canadian Embassy, 35 Ave. Montaigne, Paris 8°. Territory includes Algeria, French West Africa, Morocco, Tangier and Tunisia.
- GERMANY, FEDERAL REPUBLIC OF.—Commercial Counsellor, Canadian Embassy, 22 Zitelmannstrasse, Bonn.
Consul, Canadian Consulate, 69 Ferdinandstrasse, Hamburg.
- GHANA.—Commercial Counsellor, Office of the High Commissioner for Canada, E115/3 Independence Ave., Accra. Territory includes Gambia, Nigeria and Sierra Leone.
- GREECE.—Commercial Counsellor, Canadian Embassy, 31 Vassilissis Sophias Ave., Athens. Territory includes Israel and Turkey.
- GUATEMALA.—Canadian Government Trade Commissioner, 5 Avenida, 10-68, Zone I, Guatemala City. Territory includes Costa Rica, El Salvador, Honduras, Nicaragua, Panama and Canal Zone.
- *HAITI.—Chargé d'Affaires *ad interim* and Consul, Canadian Embassy, Route du Canape Vert, St. Louis de Turgeau, Port au Prince.
- HONG KONG.—Canadian Government Trade Commissioner, Hong Kong and Shanghai Banking Corporation Bldg., Hong Kong. Territory includes Cambodia, Laos, Vietnam, Macao and China.
- INDIA.—Commercial Counsellor, Office of the High Commissioner for Canada, 4 Aurangzeb Road, New Delhi.
Canadian Government Trade Commissioner, Gresham Assurance House, Mint Road, Bombay. Territory includes Goa.

* No Foreign Trade Officer at this post.

- INDONESIA.—Commercial Secretary, Canadian Embassy, Djl. Budi Kemuliaan No. 6, Djakarta.
- IRAN.—Commercial Counsellor, Canadian Legation, Teheran.
- IRELAND.—Commercial Counsellor for Canada, 66 Upper O'Connell St., Dublin.
- ITALY.—Commercial Counsellor, Canadian Embassy, Via G. B. de Rossi 27, Rome. Territory includes Libya, Malta and Yugoslavia.
- JAPAN.—Commercial Counsellor, Canadian Embassy, Tokyo. Territory includes South Korea.
- LEBANON.—Commercial Secretary, Canadian Embassy, Alpha Building, Rue Clemenceau, Beirut. Territory includes Iraq, Jordan, Persian Gulf Area, and Syrian region of the United Arab Republic.
- MEXICO.—Commercial Counsellor, Canadian Embassy, Melchor Ocampo 463, 7th Floor, Mexico 5, D.F.
- NETHERLANDS.—Commercial Counsellor, Canadian Embassy, Sophialaan 5-7, The Hague.
- NEW ZEALAND.—Commercial Counsellor, Office of the High Commissioner for Canada, Government Life Insurance Bldg., Wellington. Territory includes Fiji and Western Samoa and French Oceania.
- NORWAY.—Commercial Counsellor, Canadian Embassy, Fridtjof Nansens Plass 5, Oslo. Territory includes Iceland.
- PAKISTAN.—Commercial Secretary, Office of the High Commissioner for Canada, Hotel Metropole, Victoria Road, Karachi. Territory includes Afghanistan.
- PERU.—Commercial Secretary, Canadian Embassy, Edificio Boza, Carabaya 831, Plaza San Martin, Lima. Territory includes Bolivia.
- PHILIPPINES.—Consul General and Trade Commissioner, Canadian Consulate General, Ayala Bldg., Juan Luna Street, Manila. Territory includes Taiwan.
- PORTUGAL.—Commercial Counsellor, Canadian Embassy, Rua Marques de Fronteira, No. 8-4°D°, Lisbon. Territory includes Azores, Cape Verde Islands, Madeira, and Portuguese Guinea.
- RHODESIA AND NYASALAND, FEDERATION OF.—Canadian Government Trade Commissioner, Offices 110-113 Central Africa House, Corner First St./Gordon Ave., Salisbury. Territory includes Kenya, Seychelles Islands, Tanganyika, Uganda and Zanzibar.
- SINGAPORE.—Canadian Government Trade Commissioner, Rooms 4, 5 and 6, American International Bldg., Robinson Road and Telegraph St., Singapore. Territory includes Brunei, Burma, Federation of Malaya, North Borneo, Sarawak and Thailand.
- SOUTH AFRICA.—Canadian Government Trade Commissioner, Mutual Bldg., Harrison Street, Johannesburg. Territory includes Natal, Transvaal, Orange Free State, Madagascar, Mauritius, Mozambique, and Reunion.
- Canadian Government Trade Commissioner, 602 Norwich House, The Foreshore, Cape Town. Territory includes Cape Province, St. Helena, and Southwest Africa.
- SPAIN.—Commercial Counsellor, Canadian Embassy, Edificio España, Avenida de Jose Antonio 88, Madrid. Territory includes Balearic Islands, Canary Islands, Gibraltar, Rio Muni and Rio de Oro.
- SWEDEN.—Commercial Counsellor, Canadian Embassy, Strandvagen, 7-C, Stockholm. Territory includes Finland.
- SWITZERLAND.—Commercial Counsellor, Canadian Embassy, Kirchenfeldstrasse 88, Berne.
- UNITED ARAB REPUBLIC EGYPTIAN REGION.—Commercial Secretary, Canadian Embassy, 6 Sharia Rouston Pasha, Garden City, Cairo. Territory includes Aden, Sudan, Cyprus, Ethiopia, Saudi Arabia and Yemen.
- UNITED KINGDOM.—Minister (Commercial), Office of the High Commissioner for Canada, Canada House, Trafalgar Square, London, S.W.1.
Canadian Government Trade Commissioner, Martins Bank Building, Water Street, Liverpool.
Canadian Government Trade Commissioner, 36 Victoria Square, Belfast, Northern Ireland.
- UNITED STATES.—Minister (Commercial), Canadian Embassy, 1746 Massachusetts Avenue N.W., Washington 6, D.C.
Deputy Consul General (Commercial), Canadian Consulate General, 680 Fifth Avenue, New York City 19, N.Y.

UNITED STATES.—concluded

Consul and Trade Commissioner, Canadian Consulate General, 532 Little Bldg., 80 Boylston Street, Boston 16, Mass.

Consul and Trade Commissioner, Canadian Consulate General, 111 North Wabash Ave., Chicago, Ill.

Consul and Trade Commissioner, Canadian Consulate, 1139 Penobscot Bldg., Detroit 26, Mich.

Consul and Trade Commissioner, Canadian Consulate General, 510 West Sixth Street, Los Angeles 14, Cal.

Consul and Trade Commissioner, Canadian Consulate General, 215-217 International Trade Mart, New Orleans 12, La.

*Consul General, Canadian Consulate General, 3rd Floor, Kohl Bldg., 400 Montgomery Street, San Francisco 4, Cal.

*Consul General, Canadian Consulate General, The Tower Bldg., Seventh Avenue at Olive Way, Seattle 1, Wash.

URUGUAY.—Commercial Counsellor, Canadian Embassy, No. 1409 Avenida Agraciada, Piso 7°, Montevideo. Territory includes Paraguay and Falkland Islands.

VENEZUELA.—Commercial Counsellor, Canadian Embassy, Edificio Pan American, Avenida Urdaneta, Puente Urapal, Candelaria, Caracas. Territory includes Netherlands Antilles.

WEST INDIES.—Commissioner for Canada, Colonial Bldg., 72 South Quay, Port-of-Spain. Territory includes Barbados, Trinidad and Tobago, Windward and Leeward Islands, British Guiana, French Guiana, Surinam, Guadeloupe and Martinique.

Canadian Government Trade Commissioner, Barclays Bank Building, King Street, Kingston. Territory includes Jamaica, the Bahamas and British Honduras.

Trade Publicity Branch.—The principal function of the Trade Publicity Branch is to promote trade between Canada and other countries in the publicity field. It furnishes the commercial community of Canada with information concerning the assistance that exporters and importers may obtain from the Department of Trade and Commerce. The Branch is responsible also for stimulating a better appreciation by the general public of the importance of trade to the welfare of Canada. The attention of exporters and potential exporters is directed to opportunities for the disposal of their products in markets abroad, and of importers to sources of supply for raw materials and consumer goods unobtainable in Canada. Its principal educational and informative medium is *Foreign Trade*, fortnightly publication of the Foreign Trade Service, in which are reproduced reports of Canadian Trade Commissioners on conditions in their respective territories, articles by Head Office personnel and economists of the Dominion Bureau of Statistics, news items and charts portraying trade trends. Press releases are prepared and distributed to newspapers at home, and material of similar character dispatched to Canadian Trade Commissioners for distribution to newspapers abroad. Pamphlets and brochures are prepared to supplement other information on foreign markets, sources of supply, documentation, regulations and trade restrictions. Assistance is rendered to correspondents of newspapers and periodicals at home and abroad in the preparation of articles pertaining to various phases of Canada's foreign trade. The educational and promotional work of this Branch is supported by moderate advertising at home and abroad through the daily press, periodicals and trade papers, and by films and radio.

Section 2.—The Development of Tariffs

A short sketch of trade and tariffs prior to Confederation is given in the 1940 Year Book, pp. 480-482. The 1942 Year Book, pp. 427-428, traces the development from Confederation to the adoption in 1904 of the present form of preferential tariff.

Limitations of space in the Year Book have made it necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships in force at present and to summarize as much as possible historical data and details of preceding tariffs, giving references to those editions of the Year Book where extended treatments may be found.

* No Foreign Trade Officer at this post.

Subsection 1.—The Canadian Tariff Structure*

The Canadian Tariff consists, in the main, of three sets of tariff rates—British Preferential, Most-Favoured-Nation, and General.

British Preferential Tariff rates are, with some exceptions, the lowest rates. They are applied to imported dutiable commodities shipped direct to Canada from countries of the Commonwealth and from the British colonies and other dependent overseas territories. Some Commonwealth countries have trade agreements with Canada which provide for rates of duty, on certain specified goods, lower than the British Preferential rates.

Most-Favoured-Nation rates are usually higher than the British Preferential rates and lower than the General Tariff rates. They are applied to commodities imported from countries outside the Commonwealth with which Canada has made trade agreements. The most important trade agreement concerning the effective rates applied to goods imported from countries entitled to Most-Favoured-Nation rates is the General Agreement on Tariffs and Trade (GATT).

General Tariff rates are applied to goods imported from the few countries with which Canada has not made trade agreements.

There are numerous goods which are duty free under the British Preferential Tariff, or under both the British Preferential and Most-Favoured-Nation Tariff, or under all Tariffs.

Valuation.—In general, the Customs Act, as amended effective Sept. 6, 1958, provides that the value for duty of imported goods shall be the fair market value of like goods as established in the home market of the exporter at the time when and place from which the goods are shipped directly to Canada when sold "(a) to purchasers located at that place with whom the vendor deals at arm's length and who are at the same or substantially the same trade level as the importer, and (b) in the same or substantially the same quantities for home consumption in the ordinary course of trade under competitive conditions". In cases where like goods are not sold for home consumption but similar goods are sold, the value for duty shall be the cost of production of the goods imported plus an amount for gross profit at least equal in percentage to that earned on the sale of similar goods in the country of export. The value for duty may, in no case, be less than the amount for which the goods were sold to the purchaser in Canada, exclusive of all charges thereon after their shipment from the country of export. Internal taxes in the country of export (when not incurred on exported goods), the cost of shipping goods to Canada and similar charges, do not normally form part of the value for duty. There are, of course, further provisions for determining value for duty under the Act.

Dumping.—Sect. 6 of the Customs Tariff provides that when the actual selling price of goods being imported is less than their fair market value and the goods are of a class or kind made or produced in Canada, a special or dumping duty shall be collected. This duty is to be equal to the difference between the actual selling price and the fair market value of the goods, except that it may not be more than 50 p.c. of the value for duty. These provisions are designed to offset the advantage foreign exporters may achieve by exporting to Canada at less than the going prices.

Drawback.—There are provisions in the Customs and Excise Tax Acts for the repayment of a portion of the duty, sales and/or excise taxes paid on imported goods used in the manufacture of products later exported. The purpose of these drawbacks (as these repayments are called) is to assist Canadian manufacturers to compete in foreign markets with foreign producers of similar goods. A second class of drawback, known as "home consumption" drawbacks, is provided for under the Customs Tariff Act and applies to imported materials and/or parts used in the production of specified goods to be consumed in Canada.

* Information relating to rate of duty and value for duty is available from the Department of National Revenue, Customs and Excise Division, which administers the Customs Act and the Customs Tariff Act.

The Tariff Board.—The Tariff Board, constituted by the Tariff Board Act 1931, consists of five members, one of whom is chairman and two are vice-chairmen. The duties and powers of the Board derive from three Statutes of Canada: the Tariff Board Act, the Customs Act, and the Excise Tax Act.

Under the Tariff Board Act, the Board makes inquiry into and reports upon any matter in relation to goods that, if brought into Canada or produced in Canada, are subject to or exempt from duties of customs or excise and on which the Minister of Finance desires information. The investigation into any such matter may include inquiry as to the effect that an increase or decrease of the existing rate of duty upon a given commodity might have upon industry or trade and the extent to which the consumer is protected from exploitation. It is also the duty of the Board to inquire into any other matter in relation to the trade and commerce of Canada that the Governor in Council sees fit to refer to the Board for inquiry and report. Usually the references take one of two forms: authority for review of sections of the Customs Tariff relating to an entire industry, or for investigation in respect of specified commodities. Reports are tabled in Parliament.

Under the provisions of the Customs Act and the Excise Tax Act, the Tariff Board acts as a court to hear appeals from rulings of the Department of National Revenue in respect of matters of administration including those of excise taxes, tariff classification, value for duty, and drawback of customs duties. Declarations of the Board on appeals on questions of fact are final and conclusive, with provision for appeal on questions of law to the Exchequer Court of Canada. Tariff references and appeals receive public hearings at which interested parties submit oral statements and written briefs relating to matters under consideration.

Subsection 2.—Tariff and Trade Arrangements with Other Countries as at Nov. 1, 1958

Canada's tariff arrangements with other countries fall into three main categories: trade agreements with a number of Commonwealth countries; the General Agreement on Tariffs and Trade (GATT); and other agreements and arrangements.

The Commonwealth countries with which Canada has trade agreements are as follows: Australia, British West Indies, New Zealand, Federation of Rhodesia and Nyasaland, Union of South Africa and the United Kingdom and Colonies. Preferences are accorded by Canada to India and Pakistan. Tariff relations between Canada and Ceylon, Ghana and the Federation of Malaya are governed by the Canada-United Kingdom agreement. These agreements and arrangements have been modified and supplemented by GATT. Canada exchanges most-favoured-nation treatment with 36 countries under the General Agreement on Tariffs and Trade. The protocol of Provisional Application of the General Agreement on Tariffs and Trade was signed by Canada on Oct. 30, 1947, and brought the Agreement provisionally into force on Jan. 1, 1948.

GATT is a multilateral trade agreement providing for scheduled tariff concessions and the exchange of most-favoured-nation treatment among the contracting parties and laying down rules and regulations to govern the conduct of international trade. Under the system of multilateral tariff negotiations initiated under GATT, four general rounds of negotiations have taken place: at Geneva, Switzerland, in 1947; at Annecy, France, in 1949; at Torquay, England, in 1950-51; and again at Geneva in 1955-56. The tariff concessions Canada granted and received at the first Geneva Conference are described in the 1948-49 Year Book, pp. 875-877, and those negotiated at Annecy are discussed in the 1950 Year Book, pp. 968-970. The Torquay negotiations are discussed in the 1952-53 edition, pp. 996-997. The existing tariff concessions remain in force until Jan. 1, 1961, and thereafter unless modified in accordance with the terms of the Agreement.

Canada already had most-favoured-nation trade agreements with a number of GATT members prior to the effective date of the General Agreement. These agreements with individual countries continue in force in conjunction with the General Agreement. As an exception, however, the Canada-U.S. Trade Agreement of 1938 is suspended for so long as both countries continue to be contracting parties to GATT.

Other arrangements include a trade agreement with the Republic of Ireland, exchanging preferences, and most-favoured-nation agreements with many countries not contracting parties to GATT.

**Tariff and Trade Arrangements with Commonwealth Countries as at
Nov. 1, 1958**

Country	Agreement	Principal Terms
AUSTRALIA.....	Trade Agreement signed July 8, 1931; in force Aug. 3, 1931. GATT effective Jan. 1, 1948.	Agreement includes schedules of tariff rates and exchange of British preferential rates on items not scheduled. May be terminated on six months notice.
BRITISH WEST INDIES (BAHAMAS, BARBADOS, JAMAICA, LEEWARD AND WINDWARD ISLANDS, TRINIDAD AND TOBAGO), BERMUDA, BRITISH GUIANA, AND BRITISH HONDURAS.	Trade Agreement signed July 6, 1925, in force Apr. 30, 1927; Canadian notice of termination of Nov. 23, 1938, was replaced by notice of Dec. 27, 1939, which continued the Agreement. The British West Indies (except Jamaica), Bermuda, British Guiana and British Honduras participate in GATT.	The parties exchange specified tariff preferences. Agreement may be terminated on six months notice.
CEYLON.....	Relations continue to be governed by the Trade Agreement of 1937 between Canada and the United Kingdom. GATT effective July 29, 1948.	Canada and Ceylon exchange preferential tariff treatment.
GHANA.....	Relations continue to be governed by the Trade Agreement of 1937 between Canada and the United Kingdom. GATT effective Oct. 18, 1957.	Canada grants Ghana the British preferential rates, except on cocoa beans.
INDIA.....	Since 1897 Canada has unilaterally accorded British preferential treatment to India but without contractual obligation. GATT effective July 8, 1948.	In addition to preferences granted to India, most-favoured-nation treatment is exchanged under GATT.
MALAYA, FEDERATION OF...	Relations continue to be governed by the Trade Agreement of 1937 between Canada and the United Kingdom. GATT effective Oct. 24, 1957.	Canada grants Malaya British preferential rates in return for such preferences as exist in the Malayan tariff.
NEW ZEALAND.....	Trade Agreement signed Apr. 23, 1932; in force May 24, 1932. GATT effective July 26, 1948.	The parties exchange specific preferences on scheduled goods and reciprocally concede British preferential rates on items not scheduled. May be terminated on six months notice.
PAKISTAN.....	Canada unilaterally accords Pakistan British preferential treatment but without contractual obligation. GATT effective July 30, 1948.	In addition to preferences granted to Pakistan, most-favoured-nation treatment is exchanged under GATT.

**Tariff and Trade Arrangements with Commonwealth Countries as at
Nov. 1, 1958—concluded**

Country	Agreement	Principal Terms
RHODESIA AND NYASALAND, FEDERATION OF.	Trade Agreement signed Feb. 6, 1958; in force Feb. 7, 1958. GATT effective in Southern Rhodesia May 19, 1948; extended to whole Federation, Oct. 29, 1954.	Canada exchanges preferential tariffs with the Federation.
UNION OF SOUTH AFRICA...	Trade Agreement signed Aug. 20, 1932; in force Oct. 13, 1932. Exchange of notes Aug. 2-31, 1935; effective retroactive from July 1, 1935. GATT effective June 14, 1948.	Agreement includes schedules of tariff preferences granted by each country. May be terminated on six months notice. Exchange of most-favoured-nation treatment. May be terminated on six months notice.
UNITED KINGDOM.....	Trade Agreement signed Feb. 23, 1937; in force Sept. 1, 1937. Modified by an exchange of letters of Nov. 16, 1938, and an exchange of notes Oct. 30, 1947. GATT effective Jan. 1, 1948.	Various concessions by both countries including exchange of preferential tariff rates (some minor reservations by Canada). Extends to Colonies.
WEST INDIES, FEDERATION OF THE (TRINIDAD, JAMAICA, BARBADOS, LEEWARD AND WIND- WARD Islands).	Trade relations continue to be governed by the Canada-British West Indies Agreement (see p. 1043).	

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Nov. 1, 1958**

Country	Agreement	Principal Terms
ARGENTINA.....	Trade Agreement signed Oct. 2, 1941; provisionally in force Nov. 15, 1941.	Exchange of most-favoured-nation treatment. Provisional application may be terminated on three months notice.
AUSTRIA.....	GATT effective Oct. 19, 1951.	Exchange of most-favoured-nation treatment.
BELGIUM-LUXEMBOURG....	Convention of Commerce with Belgium-Luxembourg Economic Union (including Belgian colonies) entered into effect Oct. 22, 1924. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.
BOLIVIA.....	Order in Council of July 20, 1935, accepted Article 15 of the United Kingdom-Bolivia Treaty of Commerce of Aug. 1, 1911.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Nov. 1, 1958—continued**

Country	Agreement	Principal Terms
BRAZIL.....	Trade Agreement signed Oct. 17, 1941; provisionally in force from date of signing and definitively on Apr. 16, 1943. GATT effective July 31, 1948.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
BURMA.....	GATT effective July 29, 1948.	Exchange of most-favoured-nation treatment.
CAMBODIA.....	Franco-Canadian Trade Agreement of 1933 applied to Cambodia.	Since the creation of Cambodia as an independent State in 1955, Canada has continued to grant most-favoured-nation rates.
CHILE.....	Trade Agreement signed Sept. 10, 1941; provisionally in force Oct. 15, 1941, and definitively on Oct. 29, 1943. GATT effective Mar. 16, 1948.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.
CHINA.....	<i>Modus vivendi</i> signed Sept. 26, 1946; in effect since Sept. 28, 1946.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
COLOMBIA.....	Treaty of Commerce with United Kingdom of Feb. 16, 1866, applies to Canada. Modified by protocol of Aug. 20, 1912, and exchange of notes Dec. 30, 1938. A Trade Agreement between Colombia and Canada was signed Feb. 20, 1946, but has not been put into force.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
COSTA RICA.....	<i>Modus vivendi</i> signed Nov. 18, 1950; brought into force Jan. 26, 1951.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
CUBA.....	GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment (excluding preferences accorded by Cuba to the United States).
CZECHOSLOVAKIA.....	Convention of Commerce signed Mar. 15, 1928; in force Nov. 14, 1928. GATT effective May 21, 1948.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—Combined Statistics of Public Finance for All Governments

Combined statistics of public finance for all governments in Canada—federal, provincial and municipal—are presented in this Section. Additional information is provided for each level of government in Sections 2, 3 and 4.

Combined Revenue and Expenditure.—Tables 1 and 2 give details of the federal, provincial and municipal net combined revenue by sources and net combined current and capital expenditure by services, respectively, for 1955 and 1956. This net basis has been prepared by deducting from revenue, and the appropriate expenditure, certain specified amounts such as grants-in-aid and shared-cost contributions from other governments, institutional revenue, certain other sales of commodities and services, and interest, premium, discount and exchange revenue. Amounts provided for debt retirement are excluded to avoid duplication since all expenditure resulting from capital borrowings is included.

Inter-government transfers such as subsidy payments by the Federal Government to the provincial governments are unconditional grants and therefore cannot be offset against any specific expenditure. These are set out separately in Tables 1 and 2 in order to prevent duplication and to provide additive totals. Because of the differing accounting practices of governments and variations in fiscal year-ends, discrepancies appear between the amounts recorded as inter-government transfers in the two tables.

* Revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

¹ Includes treasury bills having a term of two or more years. ² Includes treasury bills having a term of less than two years. ³ Includes treasury notes.
⁴ Excludes contingent liability in respect of Federal Government guarantee of deposits maintained by chartered banks in the Bank of Canada and miscellaneous guarantees the amount of which were not finally determined or were indeterminate at the close of the fiscal year.

Section 2.—Federal Public Finance

Subsection 1 of this Section introduces new tables dealing with statistics of the Federal Government in accordance, as far as possible, with the classifications, concepts and definitions used in the preparation of provincial and municipal finance statistics. These tables differ from the information presented in Subsection 2 in that the latter has been extracted directly from the *Public Accounts*. Detailed reports published by the Dominion Bureau of Statistics provide reconciliations of revenue, expenditures and debt as set out in Subsections 1 and 2. The *Public Accounts* presentation is retained for continuity, and also because there is interest in and use for information on this basis.

Historical Data.—A sketch of public finance from the French régime to the outbreak of World War I appears in the 1941 Year Book, pp. 742-743. Detailed sketches *re* tax changes from 1914 to 1938 will be found in issues of the Year Book beginning with the 1926 edition. An outline of the financing of Canada's war effort, including the more important changes in taxation during the war years from 1939 to 1945, is given in the 1945 Year Book, pp. 918-923. The postwar financial policy of the Government of Canada is outlined in the 1954 Year Book at pp. 1061-1064, and tax changes proposed in subsequent Budgets are outlined briefly in the 1955, 1956 and 1957-58 Year Books.

The 1958-59 Budget.—The Budget presented June 17, 1958, to the first session of the 24th Parliament contained no major changes in tax rates. It provided for numerous minor changes in the Income Tax Act. Exemptions for medical expenses and for dependants and wives were amended, as were deductible expenses of oil and gas producers. The allowable deductions for charitable contributions made by corporations were raised from 5 p.c. to 10 p.c. of income. Legislation was forecast and has since been introduced adding to gift-tax exemptions the provision for one tax-free gift from one spouse to another of ownership of the home they occupy, or from parent to child of a farm, up to the value of \$10,000. Refunds of gift tax paid within three years of death are allowed in the full amount by which the gift tax exceeds the succession duty on the gift. Depletion allowance claims in respect of dividends from non-resident companies will not be allowed after 1958.

The Estate Tax Act was passed by Parliament in 1958 and applies to the estates of persons dying on or after Jan. 1, 1959. A brief description of the Act appears in Subsection 3 of this Section, p. 1070.

Subsection 1.—DBS Statistics of Federal Public Finance

Revenue and Expenditure.—Tables 4 and 5 show details of net general revenue and net general expenditure of the Federal Government for the years ended Mar. 31, 1956 and 1957. Revenue items are classified by source and expenditure items by function. Table 6 gives details of amounts paid by the Federal Government to provincial governments and municipal corporations in the year ended Mar. 31, 1957.

Subsection 2.—Public Accounts Statistics of Federal Public Finance

Revenue and Expenditure.—Tables 9 and 10 show details of revenue and expenditure of the Federal Government for the fiscal years ended Mar. 31, 1956-58, as presented in the *Public Accounts*.

In the fiscal year ended Mar. 31, 1958, Federal Government revenue amounted to \$5,049,000,000 compared with \$5,107,000,000 in the previous year, a decrease of \$58,000,000. During the same period expenditure increased by \$238,000,000 from

\$4,849,000,000 to \$5,087,000,000, and the excess of expenditure over revenue for the fiscal year was therefore \$38,000,000. Tax revenue and non-tax revenue in 1958 decreased \$25,000,000 and \$33,000,000, respectively, from the previous fiscal year.

Guaranteed Debt.—In addition to the direct debt of the Federal Government already dealt with, there are large indirect obligations arising mainly out of the guarantee of securities by the Federal Government of the railway lines that now form the Canadian National Railways and the subsequent extensions thereof. Since 1932, guarantees of certain bank loans have been made under the various Relief Acts, the National Housing Act, the Farm Improvement Loans Act, and the Veterans Business and Professional Loans Act. When the Bank of Canada commenced business on Mar. 11, 1935, the guarantee of the deposit required to be maintained in the Bank of Canada by every chartered bank came into force. This guarantee must be implemented “in the event of the property and assets of the Bank being insufficient to pay its liabilities and/or if the Bank suspends payment of any of its liabilities”.

¹ These contingent liabilities are expressed in Canadian dollars; where applicable, stocks and bonds payable solely in sterling or United States dollars are converted on the basis of £1=\$2.80 and \$1 U.S.=\$1 Canadian, respectively. In addition the government has an indeterminate contingent liability in respect of rental guarantee contracts which in 1957 amounted to \$15,250,000. Against this amount was a reserve of \$2,002,077. ² As at Dec. 31, 1957. ³ As reported (in accordance with Sect. 45, National Housing Loan Regulations) by approved lenders for their respective fiscal years ended between Oct. 31 and Dec. 31, 1957.

A brief commentary dealing with the national debt of the Government of Canada from 1914 appears at p. 1091 of the 1954 Year Book. The following table summarizes the debt position during the period 1949-58 as to interest and amount outstanding. Details of unmatured debt and treasury bills outstanding and information on new security issues of the Federal Government may be found in the *Public Accounts*. They are summarized by standard classifications in DBS publication *Financial Statistics of the Government of Canada*.

13.—Summary of the Public Debt and Interest Payments Thereon, Years Ended Mar. 31, 1949-58

NOTE.—Statistics for 1867-1913 are given in the 1942 Year Book, p. 775; those for 1914-35 in the 1947 edition, p. 972; and those for 1936-48 in the 1951 edition, p. 1009.

¹ Based on the official estimates of population for June 1 of the year indicated (see p. 163).

² Based on the official estimates of population for June 1 of the year immediately preceding the one indicated (see p. 163).

³ The apparent increase in interest paid results from the accrued interest on refundable taxes having been charged in the year of repayment.

⁴ Excludes \$37,510,068 adjustment required to place interest on public debt on accrued basis.

⁵ These figures are not strictly comparable with those for 1952 and previous years mainly because of changed methods in accounting for cash.

Subsection 3.—Analysis of Revenue from Taxation

The following analysis of taxation revenue is confined to excise duties, excise taxes, income tax and succession duties; customs receipts constitute a single item in the *Public Accounts* and are not analysed here.

Excise Duties

Excise duties proper are presented below with a summary of the excise tariff and statistics arising as a by-product of administration, such as the quantities of grain and other products used in distillation and the quantities of goods taken out of bond and subject to excise tax.

Canadian Excise Tariff.—The following is a statement of the Canadian excise tariff as at Dec. 31, 1958:—

Spirits.....	per proof gal.	\$12.00	Spirits used directly in the manufacture of toilet preparations or cosmetics on which excise tax is applicable under Schedule I of the Excise Tax Act.....	per proof gal.	Free
Spirits used by licensed bonded manufacturers.....	per proof gal.	1.50	Canadian brandy.....	per proof gal.	\$10.00
Spirits used in bond for manufacture of perfume.....	per proof gal.	Free	Malt, all, when brought into a brewery.....	per lb.	Free
Spirits used in bond for manufacture of approved chemical compositions.....	per proof gal.	0.15	Beer, all.....	per Imp. gal.	0.38
Spirits sold to druggists licensed under the Excise Act to be used exclusively in preparation of prescriptions for medicines and pharmaceutical preparations....	per proof gal.	1.50	Tobacco, manufactured, all descriptions except cigarettes.....	per lb.	0.35
Spirits distilled from wine produced from native fruits, and used in any bonded manufactory for the treatment of domestic wine.....	per proof gal.	Free	Cigarettes, weighing not more than two and one-half pounds..	per M	4.00
Spirits imported and taken into a bonded manufactory (in addition to duties otherwise imposed).....	per proof gal.	0.30	Cigarettes, weighing more than two and one-half pounds.....	per M	5.00
			Cigars, all.....	per M	1.00
			Canadian raw leaf tobacco, when sold for consumption.....	per lb.	0.10

A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities for medicinal or research purposes to universities, scientific or research laboratories, public hospitals, or health institutions in receipt of federal and provincial government aid.

14.—Gross Excise Duties Collected, Years Ended Mar. 31, 1954-58

Item	1954	1955	1956	1957	1958
	\$	\$	\$	\$	\$

Wine and other materials..... “	3,696,117	5,721,010	5,303,650	4,114,008	4,875,894
Sulphide liquor..... gal.	394,040,231	370,916,068	409,830,302	368,070,334	374,711,047
Proof spirits manufactured.... proof gal.	24,710,625	27,330,433	28,535,869	30,028,834	28,135,387

The quantity of spirits manufactured has fluctuated greatly since 1920, varying from a low of 2,356,329 proof gal. in that year to a high of 35,555,059 proof gal. recorded in 1945. The total for 1958 was 28,135,387 proof gal.

Alcohol and Tobacco Taken Out of Bond.—The amounts of beverage spirits, malt beer, malt, cigars, cigarettes and other tobacco taken out of bond for consumption are given in the Domestic Trade Chapter, Table 36, p. 931.

Excise Taxes Collected

The statistics given in Table 16 represent gross excise tax collection by the Excise Division of the Department of National Revenue.

16.—Excise Taxes Collected, by Commodity, Years Ended Mar. 31, 1954-58

¹ Includes tax on television sets and tubes of \$11,340,860 in 1954, \$16,668,388 in 1955, \$17,627,314 in 1956, \$12,443,101 in 1957 and \$9,927,745 in 1958.

Income Tax

Income Tax Collections by the Department of National Revenue on a Fiscal Year Basis.—Statistics of income tax collections are gathered at the time the payments are made and are therefore up to date. Over 85 p.c. of individual taxpayers are wage or salary earners who have almost the whole of their tax liability deducted at the source by their employers. All other taxpayers are required to pay most of their estimated tax during the taxation year. Thus, the greater part of the tax is collected during the same year in which the related income is earned and only a limited residue remains to be collected when the returns are filed. The collections for a given fiscal year include tax deductions and instalments for twelve months, embracing portions of two taxation years, and a mixture of year-end payments for the first of these years and for the preceding year, and cannot therefore be closely related to the statistics for a given taxation year. As little information about a taxpayer is received when the payment is made and, as a single cheque from one employer may frequently cover the tax payments of hundreds of employees, the payments cannot be statistically related to taxpayers by occupation or income. Descriptive classifications of taxpayers are available only from tax returns but collection statistics, if interpreted with the current tax structure and the above factors in mind, indicate the trend of income in advance of the final compilation of statistics.

The statistics given in Table 17 pertain to tax collections by the Taxation Division of the Department of National Revenue. The collections are for fiscal years ended Mar. 31.

17.—Taxes Collected by the Taxation Division of the Department of National Revenue, Years Ended Mar. 31, 1949-58

NOTE.—Figures for 1917-34 are given in the 1947 Year Book, pp. 999-1000; for 1935-48 in the 1951 edition, p. 994.

Corporation Income Tax Statistics.—Corporation statistics presented in Tables 21 and 22 are on a taxation-year basis prior to assessment. The data were extracted and compiled from the returns shortly after they were filed and are as declared by the taxpayer without the scrutiny or revision of the Department of National Revenue. Provincial figures contain an unavoidable bias in favour of Ontario and Quebec because many large corporations operating across Canada file their returns in one or other of these two provinces.

Succession Duties

A history of succession duties in Canada, together with examples of the occurrences of federal duty on typical estates and of combined federal and provincial duties on typical estates, is given in the 1956 Year Book, pp. 1064-1068.

At Dec. 31, 1957, only Ontario and Quebec among the provinces remained in this field. The federal legislation was amended, effective for the estates of persons dying on or after Apr. 1, 1957, by allowing a full 50-p.c. reduction of the federal duty on any property which had been taxed by Canada and a prescribed province (Ontario and Quebec) and a similar 50-p.c. reduction in the federal duty on pensions in the estates of persons dying domiciled in the said provinces. Another amendment provides that charitable successions may be deducted from the aggregate net value of the estate so that the amount of such items will not result in increasing the rates of duty paid by other successors.

If gift tax payable under the provisions of the Income Tax Act has been paid in connection with the transfer made by a deceased person during his lifetime, then no succession duty is payable in respect of such gift except to the extent that succession duty thereon is in excess of the gift tax.

The Estate Tax Act passed by Parliament in 1958 applies to the estates of persons dying on or after Jan. 1, 1959. The Dominion Succession Duty Act still applies to the estates of persons dying before that date. The new Act classifies estates into two groups, depending on the domicile of the deceased at the time of death.

The estates of persons domiciled in Canada at the time of death are taxed under Part I. The basic charging provision provides that an estate tax shall be paid upon the aggregate taxable value of all property, including foreign realty, passing on the death of a person. The aggregate taxable value is the aggregate net value of the property computed in accordance with Division "B" of Part I minus the deductions permitted by Division "C". The new Act provides that the tax is to be computed by reference to the property passing on the death or deemed to pass on death rather than a personal tax upon the successor in respect of the disposition or devolution to him. As a result there is just one rate of tax regardless of how the estate is distributed.

The new Act provides, as does the old Act, that no tax is applicable if the aggregate net value of the estate is not over \$50,000. However, the new Act provides for a minimum of \$40,000 in all estates and an additional deduction of \$20,000 where the deceased's wife survives and \$10,000 for each child under 21 or over 21 if wholly dependent upon the deceased or his wife because of infirmity. The \$10,000 deduction for such a child is increased to \$15,000 if the deceased's husband or wife did not survive him. These deductions are allowed regardless of whether or not the wife or child receive any benefit. The value of property passing to a charitable organization in Canada is also deductible less any estate tax or succession duty payable out of such property.

The estates of persons domiciled outside Canada at the time of death are taxed under Part II in respect of property situated in Canada at the time of death. Such property is subject to a tax of 15 p.c. if the total value of it is over \$5,000. In computing the taxable value no deduction may be made for debts unless such debts are charged on or secured by such property.

Table 24 shows the receipts of the various governments from succession duties for 1955-58.

24.—Federal and Provincial Net Revenue from Succession Duties, Years Ended Mar. 31, 1955-58

NOTE.—Statistics for 1948-52 are given in the 1954 Year Book, p. 1080, and for 1953-54 in the 1956 edition, p. 1064.

¹ Under terms of the 1952 and 1957 Dominion-Provincial Taxation Agreements all provinces except Ontario and Quebec refrain from levying succession duties; amounts shown for other provinces are arrears. Provincial figures for 1958 are preliminary.

Subsection 4.—Subsidies and Taxation Agreements with the Provinces

Subsidies.—A summary history of certain annual payments made by the Federal Government to the provinces under the provisions of the British North America Act and subsequent arrangements entered into from time to time appears in the 1956 Year Book, pp. 1068-1069. All payments made by the Federal Government to the provinces during the year ended Mar. 31, 1957 are shown in detail in Table 6, on p. 1056.

Taxation Agreements.—Early in World War II, in order to provide revenue for heavy national expenditures and at the same time control inflationary tendencies, the provincial governments vacated the income and corporation tax fields in favour of the Federal Government for the duration of the War and a limited period thereafter, after agreeing to the terms of a tax rental fee from the Federal Government. The Agreements of 1942 were succeeded in turn by the Agreements of 1947 and the Tax Rental Agreements 1952. Under the 1952 Agreements, all provinces except Ontario and Quebec agreed to lease their personal and corporation income taxes, special corporation taxes and succession duties to the Government of Canada in exchange for a rental fee. Ontario, which had not entered into the 1947 Agreements, also agreed to lease personal and corporation income taxes and special corporation taxes but retained the right to levy succession duties. In 1952 the nine provinces received \$303,000,000 in tax rental fees compared with \$96,000,000 received by the eight provinces in 1951.

The Wartime Tax Agreements of 1942 are outlined in the 1946 Year Book, pp. 900-901. The 1947 and 1952 Tax Rental Agreements are outlined at pp. 1087-1090 of the 1954 edition.

With the 1952 Rental Agreements expiring at Mar. 31, 1957, conferences were held with the provinces in April and October 1955 and March 1956 to discuss new financial arrangements. At the October meeting the Federal Government put forward certain suggestions for discussion. These were revised and became part of the actual proposals made by letter on Jan. 6, 1956. Some further revisions in detail were made following a meeting with the provinces on Mar. 9, 1956, and the final proposals were incorporated in a Bill presented to Parliament in July 1956, entitled the Federal-Provincial Tax-Sharing Arrangements Act. This Act received Royal Assent on July 31, 1956.

The new proposals differ substantially in principle from those previously in effect, for, while provision is still made for tax rental agreements in the fields of individual and corporation income tax and succession duties, the rental fee payable is directly related to the return from these fields at agreed rates in the province concerned.

The fiscal aid subsidies which were formerly contained in the tax rental fees are now separated from such fees and contained in specific payments called "tax equalization payments". These payments are to be used to bring the per capita yield from standard taxes in a province in a year up to the level of the two provinces for which the per capita standard taxes for that year are greatest.

The standard taxes involved are: (a) individual income tax at 10 p.c. of the Federal tax; (b) corporation income tax at 9 p.c. of corporation taxable income; and (c) succession duties at 50 p.c. of the federal duties averaged over a three-year period.

In addition, provincial revenue stabilization payments are provided which will support the payments to a province at a level determined by the greatest of: (a) the adjusted 1957 tax rental payment which is the amount payable in 1956-57 to any province whether under an agreement or not, adjusted for any population changes in the year in question; (b) the projected tax rental payment which is the amount that would be payable to any province in a year if the 1952 Tax Rental Agreements were to be extended into the year in question; and (c) the basic stabilization amount which for 1958-59 is 95 p.c. of the amount of tax equalization payments, provincial revenue stabilization payments and current tax rental payments applicable to the province in 1957-58; and, for subsequent years, 95 p.c. of the average of such payments in the two previous years.

The tax equalization payments and the provincial revenue stabilization payments are payable to a province regardless of any action they may take in these tax fields. Tax rental payments are subject to agreement.

Rental agreements have been entered into with all provinces except Quebec and Ontario in all three tax fields. Ontario has rented the individual income tax to the Federal Government but levies its own corporation income and corporation taxes and succession duties. Quebec continues to levy all three taxes. Where a province levies its own taxes, there is a reduction of federal tax provided at the standard rate noted above.

Following a Dominion-Provincial Conference in November 1957, an interim measure covering the fiscal year commencing Apr. 1, 1958, was introduced in the House of Commons on Jan. 27, 1958, increasing from 10 p.c. to 13 p.c. that portion of the "standard individual income tax" which the ten provinces were entitled to receive under the Federal-Provincial Tax-Sharing Arrangements Act of 1956. Linked with the above was a second measure providing Atlantic Provinces adjustment grants of \$25,000,000 for each of four fiscal years and divided as follows: Nova Scotia, New Brunswick and Newfoundland each \$7,500,000, and Prince Edward Island \$2,500,000.

Section 3.—Provincial Public Finance

Provincial government accounting and reporting practices vary considerably so that certain adjustments to the *Public Accounts* figures are required in order to produce comparable statistics. For example, transactions relating to a specific function are sometimes

REVENUE AND EXPENDITURE OF PROVINCIAL GOVERNMENTS 1073

excluded from ordinary account; therefore special or administrative funds of this nature have been added to provincial ordinary account in the tables of this Section.

Fiscal periods are as nearly coincident as possible in view of the variations in provincial fiscal year-ends prior to the 1951 fiscal year; as of 1952 the fiscal years of all provinces end on Mar. 31. Figures for Newfoundland are included from 1949, for Yukon Territory from 1950, and for the Northwest Territories from 1955.

Subsection 1.—Revenue and Expenditure of Provincial Governments

Net general revenue as shown in Tables 25 and 26 is achieved by deducting from gross general (ordinary and capital) revenue (a) all institutional revenue, (b) revenue in the form of interest, premium, discount and exchange, (c) grants-in-aid and shared-cost contributions, and (d) all capital revenue. These revenues are then offset against the related functions of expenditure to arrive at net general (ordinary and capital) expenditure, shown in Tables 25 and 27.

¹ N.S.—Crown land leases; Ont.—municipal share of liquor licences; Alta.—share of gasoline tax \$9,990,000, and share of liquor fines \$150,000.
² Excludes grants in lieu of taxes paid by provincial government enterprises.
³ Reimbursement of taxes to newly incorporated or extended municipalities.
⁴ Excludes amounts paid directly to municipal hospital boards.
⁵ Includes grants paid directly to teachers in P.E.I., N.B., and Que.
⁶ Primary and secondary schools are operated on a denominational basis; grants to denominational schools amount to \$7,921,000.
⁷ Excludes \$3,735,000 expenditures by the province to meet debt charges of various school corporations.
⁸ Local schools are operated by the territorial government and by religious denominations.
⁹ Local schools are operated by the Federal Government; religious denominations and school districts; amount shown was paid to school districts.
¹⁰ Includes \$119,000 paid to Nicolet following disastrous fires.
¹¹ Emergency flood relief.

Subsection 2.—Debt of Provincial Governments

Table 29 shows total bonded debt, by province, as at Mar. 31, 1951-57. Table 30 shows that the majority of bond issues are payable in Canada, but that the portion payable in New York only increased slightly from 18 p.c. in 1956 to 19 p.c. in 1957. Table 31 provides details of total direct and indirect debt of provincial governments as at Mar. 31, 1957.

29.—Gross Bonded Debt (exclusive of Treasury Bills) of Provincial Governments, as at Mar. 31, 1951-57

NOTE.—These figures have been revised since the publication of the 1957-58 Year Book.

Province and Year	Bonded Debt	Average Interest Rate	Average Term of Issue	Province and Year	Bonded Debt	Average Interest Rate	Average Term of Issue

¹ Includes \$50,000 bonds issued by the Provincial Sanatorium Commission. ² Includes bonds assumed; Ont. \$900,000. ³ Having a term of two or more years. ⁴ Having a term of less than two years. ⁵ Includes \$78,081,000 net liability of the province re Province of Ontario Savings Office. ⁶ Based on estimated population as at June 1, 1957 (see p. 168).

Section 4.—Municipal Public Finance

Subsection 1.—Municipal Assessed Valuations and Taxation

Table 32 shows municipal assessed valuations and total exemptions, by province, for the year 1956; local taxes levied by municipalities and by some school authorities and total taxes outstanding at the end of 1956. Assessment figures in the various provinces are not entirely comparable as there is still variation in methods, schedules and rates, not only between provinces but also between municipalities within the same province.

¹ Includes: N.S.—household tax, Halifax; N.B.—occupancy tax, Fredericton and rentals tax, Moncton; Sask.—special franchise. ² Total of valuations assessed but exempt from taxation; excludes exempt property not assessed. ³ Incomplete. ⁴ Excludes permissive exemptions. ⁵ Excludes rural municipalities.

⁶ Excludes partial statutory and permissive exemptions.

Because of the considerable differences in the division of responsibility for services between the provincial governments and their respective municipalities, extreme caution should be exercised in using the figures in Table 32 as a basis for interprovincial comparisons of the relative burden of municipal taxation. Also, in Saskatchewan municipalities are required to levy certain taxes for and on behalf of the provincial government and for other special purposes for which there is no comparable situation in other provinces. The amounts of such taxes excluded in the Saskatchewan municipal levies in Table 32 are as follows:—

Tax	1952	1953	1954	1955	1956

Subsection 2. —Municipal Revenue, Expenditure and Debt

Tables 33, 34 and 35 show comparative totals and details of gross ordinary revenue and expenditure of municipal governments, by province. Table 36 sets out the direct and indirect debt of local governments for the year 1956. The amounts shown include debt incurred by municipalities for general purposes, schools and utilities, as well as debenture debt incurred directly by utilities, school authorities and certain special areas organized to provide specific local services.

33.—Gross Ordinary Revenue and Expenditure of Municipal Governments, by Province, Fiscal Years Ended Nearest Dec. 31, 1956

CHAPTER XXIII.—NATIONAL ACCOUNTS AND CANADA'S INTERNATIONAL INVESTMENT POSITION

CONSPECTUS

	PAGE		PAGE
SECTION 1. NATIONAL ACCOUNTS.....	1084	SECTION 2. CANADA'S INTERNATIONAL INVESTMENT POSITION.....	1095

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—National Accounts*

The national accounts constitute a set of accounting summaries for the nation as a whole and portray economic activity in terms of transactions taking place between different sections of the economy. By combining and summarizing these operations into their various classes, information may be obtained on the functioning of the economy which is of particular interest to governments concerned with problems of full employment, taxation and prices, and to businessmen concerned with programs of investment and marketing.

This measurement of the nation's output is in terms of established market prices; hence it is necessary to keep in mind that the value of the nation's production may change because of price variations as well as through increase or decrease in volume of output.

Data are available showing volume changes in gross national expenditure in addition to the value figures. Gross national expenditure is shown in Table 3 in constant dollars (i.e., in terms of 1949 prices). Because the gross national expenditure equals the gross national product, these data also reflect volume changes in the production of goods and services as measured by the gross national product. For all other tables the data are expressed in current dollars so that year-to-year changes must be considered in relation to price changes over the period.

National accounts calculated on a quarterly basis are a logical extension of the annual national accounts and have been published since 1953. However, their preparation on a reliable and analytically useful basis is rather more difficult because of the scarcity of quarterly data, special problems arising from the measurement of farm production and problems in connection with seasonal variation.

The tables in this Section cover the more important aspects of the national income analysis in annual terms. Tables 1 and 2 show the main aggregates of national income, gross national product, gross national expenditure and their components; other tables are included to show the source and disposition of personal income, government revenue and expenditure and personal expenditure on consumer goods and services.

National Income.—Net national income at factor cost measures the current earnings of Canadian factors of production (i.e., land, labour, capital) from productive activity. It includes wages and salaries, profits, interest, net rent and net income of farm and non-farm unincorporated business.

* Prepared in the Research and Development Division, Dominion Bureau of Statistics.

Gross National Product.—Gross national product, by totalling all costs arising in production, measures the market value of all final goods and services produced in the current period by Canadian factors of production. It is equal to national income plus net indirect taxes (indirect taxes less subsidies), plus capital consumption allowances and miscellaneous valuation adjustments.

Personal Income.—Personal income is the sum of current receipts of income whether or not these receipts represent earnings from production. It includes transfer payments from government such as family allowances, unemployment insurance benefits, and war service gratuities, in addition to wages and salaries, net income of unincorporated business, interest and dividends and net rental income of persons. It does not include undistributed profits of corporations and other elements of the national income not paid out to persons.

Gross National Expenditure.—Gross national expenditure measures the same aggregate as gross national product, namely, total production of final goods and services at market prices, by tracing the disposition of production through final sales to persons, to governments, to business on capital account (including changes in inventories) and to non-residents (exports). Imports of goods and services, including net payments of interest and dividends to non-residents, are deducted since the purpose is to measure only Canadian production.

Economic Activity in 1957 and 1958.—The year 1957 was characterized by a levelling-out in economic activity, in strong contrast to the vigorous expansion of the two previous years. Gross national product rose to \$31,773,000,000, slightly more than 4 p.c. higher than in 1956, but almost all of this increase was accounted for by higher prices. In real terms, therefore, the gross national product in 1957 remained at virtually the level of the preceding year after having risen by 9 p.c. in 1955 and 7 p.c. in 1956. The unchanged aggregate reflected a sharp reduction in the grain crop, amounting to about 1 p.c. of the gross national product, and a corresponding expansion in non-farm output.

Three factors acted to impede the expansion of economic activity in 1957. Business fixed capital formation continued its upward trend by increasing 9 p.c. in value terms, but the rate of growth was well below the exceptionally high rate of the previous year. The strength in the investment sector was almost entirely concentrated in non-residential construction; expenditures for machinery and equipment were only about 3 p.c. higher; the declining trend in housing was reversed in the course of the year, but expenditures for residential construction for the year as a whole were considerably lower than in 1956. At the same time, the accumulation of business inventories, which had been a powerful stimulus to economic activity in 1956, came to a halt and during the last quarter of 1957 final demand was being met in part out of stocks, to the detriment of current production. Unlike 1956, no expansionary influence came from exports of goods and services; in 1957 they did little more than maintain the level of the preceding year.

In 1958 a gradual resumption of the upward trend in the gross national product was evident and by the final quarter of the year there was a sharp rise in consumer expenditure, a strong advance in exports of goods and services and a cessation in the rate of business inventory liquidation. However, the year as a whole was affected by the previous year's heavy inventory liquidation and by the decrease in business spending for new plant and equipment so that the gross national product advanced only 2.3 p.c. over 1957 and again the increase was mainly accounted for by higher prices. The physical volume of non-farm production remained unchanged but farm production was slightly higher; the increase in volume terms for 1958 was therefore less than 1 p.c.

Personal expenditure and government expenditure rose in 1957 at rates not substantially lower than in the previous year in terms of current dollars. At the same time, the impact of the easing pressure of demand fell to a large extent on external rather than domestic sources of supply; imports of goods and services were only a little higher, in contrast to the sharply rising trend of the two preceding years. In 1958 the rates of increase in personal and government expenditure, in terms of current dollars, moved slightly upward.

Consumer expenditure on goods and services, after little change in the first half of the year, rose sharply in the fourth quarter. Exports followed the same trend and the developing strength in these demand categories had their effect on imports—in the last half of the year the downtrend that had been under way since early in 1957 was reversed.

National income moved upward by 3.5 p.c. in 1957. The major changes compared with the previous year were: a substantial fall in corporate profits, a sharp decline in farm income reflecting the smaller crop, and a lower rate of increase in labour income. Personal income rose by nearly 5.5 p.c.—significantly more than national income—caused by a sharp advance in transfer payments from governments as a result of legislative changes in social security and other benefits and a larger volume of unemployment. In 1958, national income rose a further 3 p.c. and personal income rose 6 p.c. The difference in these rates of increase was again attributed to an advance in transfer payments from governments, which amounted to 27 p.c. On the whole, the 1958 trend for most of the national income components was uniformly upward, the major exception occurring in the case of corporation profits. But here too the downturn in evidence since early 1956 was reversed during the course of the year.

Production, Employment and Prices.—The unchanged physical volume of production in 1957 compared with 1956 was the outcome of mixed and offsetting trends in the various industry groups. The drop in farm output coincided with lower output in two other primary industries, forestry and fishing. In general, the gains in production occurred in the service-producing industries. In manufacturing the losses were largely concentrated in the durable lines. The output of the construction industry rose, as did* that of mining where gains in certain new products more than offset losses in some traditional minerals. Despite the lack of growth in production, the number of persons with jobs was significantly higher in 1957 than in 1956, but the growth of the labour force was unusually large, partly because of the recent high level of immigration, and the number of persons without jobs and seeking work rose from 3.1 p.c. of the labour force in 1956 to 4.3 p.c. in 1957. Prices of final products continued upward throughout 1957 and for the year as a whole advanced about 4 p.c. above 1956. The pressure on prices was most pronounced in the services component of personal expenditure and in the machinery and equipment component of gross fixed capital formation. At the same time, wholesale prices eased slightly during the year as the fall in prices of raw and partly manufactured goods and industrial materials a little more than offset the continued advance in prices of fully and chiefly manufactured goods.

The 1957 trend in production and employment continued in 1958. The volume of output rose by less than 1 p.c. during the year. Although agricultural production was up substantially as a result of greater output and exports of livestock and higher domestic prices, mineral production remained almost unchanged and forestry was down about 10 p.c. Manufacturing production was down by nearly 4 p.c. and most of the decline again occurred in the durable goods group of industries. On the other hand, all service-producing industries continued to advance with the exception of transportation, communications and storage, the latter being affected by the reduced scale of operations in the commodity-producing industries and the lower volume of imports. The number of persons with jobs in 1958 averaged 0.4 p.c. lower than in 1957, though the number with jobs in the non-agricultural sector was up by 0.2 p.c. With the growth in the labour force and the decline in the total number of persons with jobs, the number of persons without jobs and seeking work advanced to 6.6 p.c. of the labour force. Price factors were less conspicuous as an element of the value change in gross national product between 1958 and 1957 than in the preceding year. Almost all components registered smaller price advances in 1958 than in 1957. On the whole, prices advanced by about 2 p.c., the greater part of the increase being in the area of consumer services and non-durable goods.

Components of Gross National Expenditure.—Personal expenditure on consumer goods and services rose nearly 6 p.c. in 1957 and by more than 5 p.c. in 1958, fairly closely in line with the rises in personal income. In 1957 most of the advance in spending

was in non-durable goods and services and, whereas in 1956 the greater part of the substantial advance in consumer spending represented a gain in real consumption, in 1957 higher prices accounted for most of the increase. The increase in 1958, however, was fairly well distributed over the three main categories of consumer spending, services receiving more than 6 p.c., non-durables about 5 p.c. and durables about 3 p.c. In that year, higher prices and increased real consumption were equally important in accounting for the advance in total spending.

Government expenditure on goods and services rose approximately 7 p.c. in both years, with most of the increase at the provincial and municipal levels. At the federal level, declines in defence expenditure were approximately offset by increases in expenditure for other purposes.

In 1955 and 1956 high and rising foreign and domestic demand for the products of Canada's resource-based industries had encouraged an upthrust of investment in plant and equipment. At the same time, very large construction projects were under way, the most conspicuous being the St. Lawrence Seaway and the Trans-Canada Pipeline. New projects launched in 1957, together with continuing work on those already in progress, raised expenditure on non-residential construction to \$3,233,000,000, about 25 p.c. higher than in 1956 which in turn had been 40 p.c. higher than in 1955. Thus, non-residential construction stood out as the most important single source of strength in the economy in 1957. By contrast, expenditures on new machinery and equipment were only about 3 p.c. above those of 1956, when they had risen 34 p.c. above the level of the preceding year.

Expenditure on new residential construction in 1957 was nearly 7 p.c. lower than in 1956. However, in response to easier conditions in mortgage markets and an improved supply of labour and materials, housing starts, which had been falling in 1956, made a strong recovery during the course of 1957 and continued high throughout 1958 with the result that expenditure on residential construction established new records in the latter year, reaching an estimated \$1,762,000,000. On the other hand business expenditure for plant and equipment dropped to a figure 13 p.c. lower than in 1957 and the distribution of investment by industry was strikingly altered. Outlays for financial services and for institutions rose sharply but all other industries except agriculture curtailed their investment in varying degrees. On the whole, business gross fixed capital formation, estimated at \$6,899,000,000 in 1958, fell about 6 p.c. from the level of 1957 following three years of impressive increases.

Total holdings of inventories were reduced in 1958 by about \$400,000,000 in contrast to the year 1957 when a moderate build-up of inventories occurred. The turnaround reflected mainly a shift in the position of business inventories from accumulation to liquidation, but farm inventories and grain in commercial channels also contributed to the lowering of stocks in 1958. The liquidation of \$276,000,000 in business stocks, which represented a turnaround of almost \$600,000,000 from 1957 and was the largest annual decline in the postwar period, was concentrated mainly in the manufacturing industries and was most pronounced in iron and steel products and in the transportation equipment industries. Trade inventories showed, on balance, a slight accumulation in 1958, resulting from the continued build-up of stocks in retail food stores.

Exports of goods and services in 1957 were only fractionally higher than in 1956. International markets for some primary commodities weakened during the course of the year and thus the value of exports of copper, lead and zinc products—prices of these products having fallen considerably—was down 16 p.c.; markets for lumber and wood pulp also deteriorated. Sales of wheat and other grains were sharply reduced but there was a more

than fourfold increase in exports of cattle. Canada's enlarged capacity to supply new resource products, notably uranium and petroleum, helped to maintain export totals, as did substantial increases in sales of such traditional export products as nickel and asbestos. The general trends developed in 1957 were accentuated in 1958. Two new resource products, uranium and natural gas, made heavy contributions to export totals, their value rising by about \$165,000,000. The export value of wheat and flour, cattle and aircraft also rose sharply but decreases occurred in many traditional exports as well as in some of the new resource products. The first category included pulp and paper, copper, nickel, lead, zinc and asbestos, and the second included petroleum and iron ore.

Imports of goods and services in 1957 also were only slightly above the level of 1956 in contrast with the impressive increases of the two preceding years. This stability in imports was related to the levelling-off in investment in machinery and equipment and the sharply reduced rate of investment in business inventories; imports of investment goods were down 1.5 p.c. in 1957 in contrast with a rise of more than 30 p.c. in 1956 and imports of industrial materials were down 5 p.c. as compared with a 20-p.c. increase in 1956. The downward trend of imports became more pronounced in 1958, dropping 6 p.c. below the 1957 total. The bulk of this decline was again concentrated in those groups where imports had risen very sharply during the period of rapidly rising investment in plant and equipment in 1955 and 1956, particularly metal products. At the same time, imports of many consumer goods remained at about the level of 1957. However, by mid-1958 the downtrend of imports of goods and services levelled off and then began to rise and in the fourth quarter of the year the advance was particularly sharp.

After a slight increase in 1957 over 1956, the over-all deficit on current account showed a drop of 24 p.c. in 1958.

Components of National Income.—Labour income rose 7.3 p.c. in 1957 and another 3 p.c. in 1958. The major part of this advance was accounted for by higher wage rates. Almost all industrial groups shared the 1957 increase, forestry being the major exception, and the gains were most pronounced in the service-producing industries. In 1958 forestry again suffered a sharp reduction reflecting the much reduced level of employment in the industry, and lesser declines in mining and manufacturing were related in part to the incidence of industrial disputes in these industries. Labour income in all the service-producing industries, except transportation, again increased in 1958 reflecting generally expanded employment as well as further advances in earnings.

The accrued net income of farm operators from farm operations fell \$500,000,000 to \$968,000,000 in 1957 as compared with 1956, largely because of the much smaller crop in the Prairie Provinces. However, although there was little change in crop production, larger output and higher prices for livestock and animal products brought the 1958 total up to an estimated \$1,200,000,000. Income of unincorporated business which had remained approximately the same in 1957 as in 1956, rose 5 p.c. in 1958. The largest gains occurred in construction and fishing but retail trade and the service groups also advanced.

Corporation profits, sensitive as always to changes in the pressure of demand, fell by 10.5 p.c. in 1957 and by 3 p.c. in 1958. The trend of corporate earnings by industry mirrored the mingled elements of weakness and strength present in the economy in 1958. The sharpest drop in profits—21 p.c.—occurred in mining, quarrying and oil wells. Profits in manufacturing fell 8 p.c., the major declines being in iron and steel, petroleum and coal and electrical apparatus and supplies. Certain other manufacturing industries had higher earnings, notably foods and beverages, wood and paper products and chemicals. In general, the service-connected industries earned somewhat higher profits in 1958.

Section 2.—Canada's International Investment Position*

Canada is by far the world's largest importer of private long-term capital, and the tremendous capital formation which has been a feature of the 1950's has been associated with an unprecedented growth in the country's external liabilities. These investments have contributed to a rapid rate of growth in the Canadian economy, particularly in the exploitation of natural resources, and have added significantly to Canadian production, employment and income. At the same time they have added substantially to the burden of Canada's external debt and to the proportion of Canadian industry controlled by non-residents.

Canada's gross external liabilities other than short-term commercial indebtedness amounted to \$18,500,000,000 at the end of 1957. (Short-term commercial debts at that time were of the order of \$1,000,000,000.) By the end of 1958 the total of these liabilities had risen by at least \$1,000,000,000. Non-resident-owned long-term investments in Canada by the end of 1957 had reached a book value of \$17,100,000,000, having more than doubled in the eight years since 1949, and the part of these investments in establishments controlled outside Canada totalled \$9,800,000,000. These foreign direct investments have been growing even more rapidly than the total and have more than doubled in the six years since 1951. Increases in other Canadian equities, although smaller, have also been substantial and there have been more moderate increases in foreign holdings of Canadian bonds and debentures.

Investments of non-resident capital have been closely related to the high rate of growth in Canada. Large development projects have been initiated and financed by investors from other countries and the growth effects from this investment have, in turn, led to Canadian borrowing in capital markets outside of Canada. While capital inflows have been the principal source of the increased indebtedness abroad, another substantial contributor has been the earnings from non-resident-controlled branches and subsidiaries which were retained in Canada. New resource industries depending to a large extent on non-resident financing include all branches of the petroleum industry, iron ore and other mining, aluminum, nickel, pulp and paper, and chemical industries. In addition, secondary industry has also benefited from non-resident investment.

Canada's gross external assets (other than short-term commercial receivables) totalled about \$7,600,000,000 at the end of 1957 and have increased moderately since that time. (Short-term commercial receivables at the end of 1957 were around \$500,000,000.) Government-owned assets made up a substantial part of the total. Taking into account short-term commercial balances, Canada's net balance of international indebtedness at the end of 1957 is estimated to have been \$11,500,000,000, and to have grown by more than \$1,000,000,000 in 1958. At this level it is well over twice the figure for 1953 and three times the figure for 1949.

Foreign Investments in Canada.—Dependence upon external sources of capital for financing in earlier periods of heavy investment activity has been characteristic of Canadian development. During the exceptional growth period that occurred before World War I the rate of increase in non-resident investment was very high and dependency upon external sources of capital was greater than in later periods. Total non-resident investments in Canada increased from an estimated \$1,232,000,000 in 1900 to \$3,837,000,000 by 1914, mainly in the form of bonded debt for railway and other expansion guaranteed by the Canadian Government. This was the period when the principal external source of capital was London, and by 1914 British investments in Canada, estimated at \$2,778,000,000, were at about their highest level. By the same date, United States investments, although they had been increasing rapidly, had only about one-third of the value of British-owned investments.

* Prepared in the Balance of Payments Section, International Trade Division, Dominion Bureau of Statistics. A more extended review appears in DBS report *Canada's International Investment Position, 1926 to 1954* and more recent statistics in the annual report *The Canadian Balance of International Payments and International Investment Position* for each of the years 1955, 1956 and 1957.

During the first part of the inter-war period the United States became the principal source of external capital, and by 1926 the United States-owned portion of Canada's international debt exceeded that owned in the United Kingdom which had not increased since 1914. Growth in United States investments in Canada continued for some years but was interrupted in the 1930's when the total was reduced by repatriations of securities and other withdrawals of capital. Increases began again in the 1940's and by the end of World War II, United States investments of \$4,990,000,000 compared with British investments of \$1,750,000,000. The latter had been reduced by wartime repatriation measures and the proceeds were used in financing British expenditures in Canada. Following the War, up to 1948, some further declines occurred in British investments in Canada but since then they have increased.

United States investments have risen each year since the end of the Second World War, particularly since 1947 when the period of intense activity in the petroleum industry got under way following new discoveries. More than half the growth in United States investment in Canada has occurred since 1950. At \$12,900,000,000, United States investments in 1957 continued to represent more than three-quarters of all non-resident investments in Canada and also made up a similar ratio of the increase since 1950. The main rise occurred in direct investments in companies controlled in the United States, which are prominent in many branches of Canadian industry. By 1957 these had increased to two and one-half times their value in 1950. In the same period portfolio investments in Canada owned in the United States rose by about one-half. A considerable part of this latter rise occurred in 1956 and 1957 when large sales of new issues of securities were made in that country.

British investments in Canada totalled \$2,915,000,000 by the end of 1957, having during the year overtaken in value the levels reached at the end of the First World War and again in the early 1930's. But these investments accounted for only 17 p.c. of the total non-resident investments in Canada compared with 36 p.c. at the end of 1939 before most of the wartime repatriations. The rise in British investments in Canada from the low point in 1948 was more than \$1,300,000,000 up to 1957, particularly concentrated in direct investments which have nearly tripled since then and which now represent a much larger portion of the total than in the prewar period. In absolute terms, this rise in total British investments in Canada is more than the rise in investments by all other overseas countries in the same period, although the rate of increase has been lower.

Investments of countries other than the United States and the United Kingdom reached a record total of \$1,285,000,000 at the end of 1957. Being well over three times the corresponding 1950 figure, this represents a much higher rate of increase than has occurred in either United States or British investments and large increases have taken place in portfolio holdings of securities as well as in direct investments. At 7 p.c. of the total, this group of countries, mostly in Western Europe, makes up a larger portion of total investments than ever before. About 90 p.c. of the direct investments, which totalled \$325,000,000 in 1955, also came from Western Europe; more than one-third was of Belgian origin with French and Swiss making up the next largest groups. Since then, German direct investments have risen significantly.

The degree of dependence upon non-resident capital for financing Canadian investment has been relatively much less in the postwar period than in the earlier periods of exceptional expansion, even though the rise in non-resident investments has been so great. Thus, from 1950 to 1955 the net use of foreign resources amounted to about one-fifth of net capital formation in Canada, and direct foreign financing amounted to about one-third. But in 1956 and 1957 when these ratios had increased considerably to about one-third and two-fifths, respectively, they were still less than the corresponding ratios in the short period 1929 to 1930 when inter-war investment activity was at its highest point. In that period more than one-half of net capital formation was financed from outside of Canada, and in the period of heavy investment before World War I an even larger ratio of invest-

ment was financed by external capital. In considering these changes it should be noted that for a decade and a half, between 1934 and 1949, Canada was a net exporter of capital and that Canadian assets abroad have been rising over a long period.

It should also be noted that the above ratios relate to the place of non-resident investments in all spheres of development including those where Canadian sources of financing predominate such as in merchandising, agriculture, housing, public utilities, and other forms of social capital. Thus non-resident financing of industry and mining has been much higher than the over-all ratios indicate, and has provided the major portion of the capital investment in this field in the period since 1948. The most comprehensive calculation of the ratios of non-resident ownership in Canadian manufacturing, mining and petroleum is for the year 1955 and it should be noted that subsequent changes are likely to have increased non-resident ownership even more. In that year the Canadian manufacturing industry was 49 p.c. owned by non-residents but capital subject to foreign control was 57 p.c. when petroleum refining is included. These proportions compared with 45 p.c. and 48 p.c., respectively, as recently as at the end of 1951. In the broad field of mining, smelting and petroleum exploration and development companies, non-resident ownership and control each amounted to 62 p.c. and 66 p.c., respectively, at the end of 1955 whereas at the end of 1951 non-resident ownership and control had amounted to 51 p.c. and 53 p.c. respectively. However, resident-owned Canadian capital continued to play a leading role in the financing of such areas of business as merchandising, railways and other public utilities. Hence non-resident ownership in the broad area of business, including industry, mining, merchandising and railways and utilities as a whole, remained just under one-third for a period of some years up to 1955 (the last year for which the calculation has been made). But, in the same years, companies subject to non-resident control increased to some extent their share of the total even in this broad area of business, a trend also evident in many subdivisions of the manufacturing and extractive industries.

The same type of analysis has been applied to investments in the petroleum industry including exploration and development, refining, merchandising, pipelines and other transportation. This industry has been the largest single recipient of capital inflows in the postwar period, accounting directly for more than one-half of the net inflow of United States capital for direct investment in Canada. By the end of 1955, investments in Canadian petroleum concerns controlled in the United States made up 74 p.c. of the total, having increased sharply from the previous year. Another 6 p.c. of the investment was controlled in overseas countries. Investments owned in the United States and overseas were 59 p.c. and 5 p.c., respectively, of the total.

Another basis of judging the place of foreign-controlled business in Canadian industry is provided by a special study of production and employment in the larger Canadian manufacturing establishments controlled in the United States. Such establishments having an investment of \$1,000,000 or more accounted for about 30 p.c. of Canadian manufacturing production in 1953 and 21 p.c. of employment in that field. These ratios in non-resident-controlled plants were considerably higher than in 1946—the previous year for which a study of this kind was made.

In some industries the proportions of production and employment in plants controlled in the United States were much higher than this. Automobiles, for example, are mainly produced in United States-controlled plants, but this is exceptional. Among other industries where well over one-half of the production is in United States-controlled firms are the smelting and refining of non-ferrous metals, petroleum refining, rubber products, and motor-vehicle parts. In several major industries like electrical apparatus and supplies and non-ferrous metal products the distribution of control between Canadian and United States-controlled companies is more evenly divided. In other industries the non-resident share is large although less than one-half the total. These include pulp and paper, other paper products, chemicals, medicinal and pharmaceutical products, sheet-metal products, and certain branches of the machinery industry.

There are, however, many industries where the largest part of production has been in Canadian-controlled plants. Prominent among these are such important branches of industry as primary iron and steel, and some other subdivisions of the iron and steel industry, textiles, clothing, and divisions of the foods and beverages industry, such as bakery products, beverages, and dairy products. But even in some of these industries changes in ownership and control have been occurring in recent years.

10.—Estimate of the Canadian Balance of International Indebtedness, as at Dec. 31, 1939-57

NOTE.—Totals are rounded and may not represent the sum of their components. They are exclusive of short-term commercial indebtedness and blocked currencies.

Canadian Assets Abroad.—While there has been a great growth in non-resident investment in Canada and in the balance of indebtedness to other countries, it will be noted that Canadian assets abroad, shown in Tables 13 and 14, have continued to rise in value each year. These now represent a larger proportion of liabilities abroad than was the case before World War II, but most of the increase since then has been in government-owned assets such as the official reserves and the loans by the Canadian Government to other governments which were extended during the War and early postwar years. In 1956 the government credits outstanding had a value of \$1,565,000,000 while official holdings of exchange amounted to \$1,866,000,000 in terms of Canadian dollars. Other official Canadian assets include Canada's subscriptions to the capital of the International Bank, the International Finance Corporation and the International Monetary Fund which, by March 1957, amounted to \$70,900,000, \$3,500,000, and \$290,900,000 respectively.

The portion of the assets in private investments, particularly in the form of direct investments abroad by Canadian companies, is still small in relation to the corresponding non-resident stake in equities in Canada. Private long-term investments abroad by Canadians in 1956 were made up of direct investments of \$1,903,000,000 and portfolio investments of \$998,000,000. More than two-thirds of the privately owned investments were located in the United States. Direct investments in that country by Canadian businesses have been growing particularly rapidly and are mainly in the beverage, farm implement and chemical industries and in railways.

Private investments in overseas countries are widely distributed. About one-half of the total in 1956 were located in Commonwealth countries, with somewhat less in the United Kingdom than in the remainder of the Commonwealth. Most of the direct investments in the United Kingdom were in industry, while in other Commonwealth countries there were investments in mining and petroleum as well as in industry. In foreign overseas countries the largest part is in the countries of Latin America made up mainly of holdings in public utilities.

13.—Canadian Assets Abroad, 1939, 1948 and 1954-56

NOTE.—Excludes investments of insurance companies and banks, Canada's subscriptions to international financial institutions and short-term assets, other than official holdings of gold and foreign exchange. Holdings of stocks are at book values as shown in the books of issuing companies; holdings of bonds are shown at par values. Foreign currencies are converted into Canadian dollars at current market rates. The series for portfolio investment was reconstructed in 1952 and is not strictly comparable with preceding years.

PART I.—CURRENCY AND BANKING*

A historical sketch of currency and banking in Canada appears in the 1938 Year Book, pp. 900-905.

Section 1.—The Bank of Canada

The Bank of Canada was incorporated under the Bank of Canada Act 1934 and commenced operations on Mar. 11, 1935.

The Bank of Canada is Canada's central bank and as such its main function is to regulate the total volume of money and credit. The normal way in which this function is performed is through changes in the cash reserves of the chartered banks. Each chartered bank is required by the Bank Act to maintain, on the average during each calendar month, an amount of cash reserves, in the form of Bank of Canada notes and deposits with the Bank of Canada, equal to not less than 8 p.c. of its Canadian dollar deposit liabilities. (Prior to July 1, 1954, each chartered bank was required to maintain at all times, cash reserves equal to not less than 5 p.c. of its Canadian dollar deposit liabilities; in practice the chartered banks normally attempted to maintain a ratio of about 10 p.c.) An increase in cash reserves encourages banks to expand their assets (mainly by purchasing securities and making loans), with a resultant similar increase in their deposit liabilities; a decrease in cash reserves tends to discourage expansion and may result in some contraction. Therefore, by taking steps to alter the volume of cash reserves available to the chartered banks, the Bank of Canada is able to influence the total of chartered bank assets and the total of their Canadian dollar deposit liabilities. The deposit liabilities of the banks, except for those payable to the Government, are of course assets of the general public and, together with currency, comprise their most liquid assets. (See Table 6, p. 1108, for Canadian dollar currency and bank deposits held by the general public.)

Open market operations in Government of Canada securities constitute the chief means by which the Bank of Canada influences the volume of chartered bank reserves. When the Bank of Canada purchases a security it issues a cheque in settlement which, after it is cashed at, or deposited with, a chartered bank by the recipient, is in turn deposited

* Except where otherwise indicated, this material has been revised by the Research Department of the Bank of Canada.

by that chartered bank in its account with the Bank of Canada, thereby increasing its cash reserves. Conversely, when the Bank of Canada sells a security the cheque which it receives in payment is charged against the account of the chartered bank on which it is drawn, thus decreasing that bank's cash reserves. Increases or decreases in other assets and liabilities of the Bank of Canada also have an effect on the chartered banks' cash reserves. For example, an increase in the amount of Bank of Canada notes held by the general public tends to reduce the banks' cash reserves.

The powers of the Bank are set forth in the Bank of Canada Act 1934 (R.S.C. 1952, c. 13), revisions in which were made in 1936, 1938 and 1954. Some of these powers are outlined below.

The Bank of Canada may vary the minimum cash reserve requirement of the chartered banks between 8 p.c. and 12 p.c. of their Canadian dollar deposit liabilities, provided that the chartered banks are given a minimum notice period of one month before each increase becomes effective and that any increase is not more than 1 p.c. during any one month. When this legislation became effective on June 1, 1954, the initial requirement was 8 p.c. and it has since remained at that level.

The Bank may make loans or advances for periods not exceeding six months to chartered banks, or to banks to which the Quebec Savings Bank Act applies, on the pledge or hypothecation of certain classes of securities. Loans or advances on the pledge or hypothecation of readily marketable securities issued or guaranteed by Canada or any province may be made to the Government of Canada or the government of any province for periods not exceeding six months. Other loans may be made to the Government of Canada or the government of any province in amounts not exceeding a fixed proportion of such government's revenue; such loans must be repaid before the end of the first quarter after the end of the fiscal year of the borrower.

The Bank of Canada is required to make public at all times the minimum rate at which it is prepared to make loans or advances. This rate, known as the Bank Rate, stood at 2 p.c. per annum from Oct. 17, 1950, to Feb. 14, 1955, when it was reduced to $1\frac{1}{2}$ p.c. It was raised to 2 p.c. on Aug. 5, 1955, to $2\frac{1}{4}$ p.c. on Oct. 12, 1955, to $2\frac{3}{4}$ p.c. on Nov. 18, 1955, to 3 p.c. on Apr. 4, 1956, to $3\frac{1}{4}$ p.c. on Aug. 10, 1956, and to $3\frac{1}{2}$ p.c. on Oct. 17, 1956. Effective Nov. 1, 1956, the Bank of Canada announced that henceforth until further notice the Bank Rate would be established weekly at a fixed margin of $\frac{1}{2}$ of 1 p.c. above the latest weekly average tender rate for 91-day treasury bills. The Bank Rate rose from 3.92 p.c. at the end of 1956 to a high of 4.33 p.c. in August 1957, declined to a low of 1.12 p.c. in July 1958, and rose again to 3.74 p.c. at the close of 1958.

The Bank has the sole right to issue paper money for circulation in Canada. Details regarding the note issue are given on p. 1106.

The Bank acts as the fiscal agent for the Government of Canada in the payment of interest and principal and generally in respect of the management of the public debt of Canada.

The Bank may buy and sell securities issued or guaranteed by Canada or any province, short-term securities issued by the United Kingdom, treasury bills or other obligations of the United States, and certain classes of short-term commercial paper. The Bank is authorized by the Industrial Development Bank Act to purchase bonds and debentures issued by the Industrial Development Bank. The Bank may buy and sell gold, silver, nickel and bronze coin, and gold and silver bullion, and may also deal in foreign exchange. The Bank may accept deposits that do not bear interest from the Government of Canada, the government of any province, any chartered bank or any bank to which the Quebec Savings Bank Act applies. The Bank does not accept deposits from individuals and does not compete with the chartered banks in commercial banking fields.

Sect. 23 of the Bank of Canada Act provides that the Bank shall maintain a reserve of gold equal to not less than 25 p.c. of its outstanding notes and deposit liabilities. This requirement was suspended in 1940 when, under the terms of the Exchange Fund Order, the Bank's gold holdings were transferred to the Exchange Fund Account to form

Canada's official gold and United States dollar reserves. The Currency, Mint and Exchange Fund Act passed in 1952 provides that, notwithstanding Sect. 23 of the Bank of Canada Act, the Bank of Canada is not required to maintain a minimum or fixed ratio of gold or foreign exchange to its liabilities unless the Governor in Council otherwise prescribes.

The Bank is under the management of a Board of Directors composed of a Governor, a Deputy Governor and twelve Directors. The Governor and Deputy Governor are appointed for terms of seven years each by the Directors, with the approval of the Governor General in Council. The Directors are appointed by the Minister of Finance, with the approval of the Governor General in Council, for terms of three years each. The Deputy Minister of Finance is a member of the Board but does not have the right to vote. There is an Executive Committee of the Board composed of the Governor, the Deputy Governor, one Director and the Deputy Minister of Finance (who is without a vote) which has the same powers as the Board except that its every decision must be submitted to the Board at its next meeting. In addition to the Deputy Governor who is a member of the Board, there may be one or more Deputy Governors appointed by the Board of Directors to perform such duties as are assigned by the Board.

The Governor is the chief executive officer of the Bank and Chairman of the Board of Directors. The Governor has the power to veto any action or decision of the Board of Directors or of the Executive Committee but such veto is subject to confirmation or disallowance by the Governor General in Council. In the absence of the Governor, the Deputy Governor, who is a member of the Board, exercises all the powers and functions of the Governor.

The capital of the Bank is \$5,000,000 and is held entirely by the Minister of Finance.* The Bank of Canada Act as amended in 1954 provides that each year 20 p.c. of the Bank's annual profits (after provision for depreciation in assets, pension funds and such matters) shall be allocated to the Rest Fund until the Rest Fund reaches an amount five times the paid-up capital of the Bank and the remainder shall be paid to the Receiver General and placed to the credit of the Consolidated Revenue Fund. At the end of 1957, the Rest Fund of the Bank reached its maximum of \$25,000,000 so that, since that date, the whole of the Bank's profits have been transferred to the Receiver General.

The head office of the Bank is at Ottawa. It has agencies at Halifax, Saint John, Montreal, Ottawa, Toronto, Winnipeg, Regina, Calgary and Vancouver and is represented in St. John's and Charlottetown. The agencies are chiefly concerned with the functions of the Bank as fiscal agent for the Government of Canada and with the issue and redemption of currency. The Industrial Development Bank, which is described on the following page, is a subsidiary of the Bank of Canada.

The Bank of Canada Act requires that statements of the assets and liabilities of the Bank on each Wednesday and the last day of each month be published in the *Canada Gazette*. A summary of the statement as at Dec. 31, 1956-58, appears in Table 1.

The Industrial Development Bank.—The Industrial Development Bank, a subsidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944 and its banking operations commenced on Nov. 1, 1944. Its functions are described in the preamble to the Act as follows:—

“To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises.”

The President of the Industrial Development Bank is the Governor of the Bank of Canada and the Directors are the Directors of the Bank of Canada. The \$25,000,000 capital stock of the Bank (completely paid up) was subscribed by the Bank of Canada. The Industrial Development Bank may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed three times the aggregate of the Bank's paid-up capital and Reserve Fund.

The lending powers of the Bank may be extended only to industrial enterprises in Canada with respect to which it is empowered to:—

- (1) lend money or guarantee loans;
- (2) enter into underwriting agreements with regard to any issue of stock, bonds or debentures;
- (3) acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement.

Industrial enterprises as defined by the Act (amended in 1956) include: (1) manufacturing, processing, assembling, installing, overhauling, reconditioning, altering, repairing, cleaning, packaging, transporting or warehousing of goods; (2) logging, operating a mine or quarry, drilling, construction, engineering, technical surveys or scientific research; (3) generating or distributing electricity or operating a commercial air service, or the transportation of persons, or (4) supplying premises, machinery or equipment for any business mentioned in (1), (2) or (3) under a lease, contract or other arrangement whereby title to the premises, machinery or equipment is retained by the supplier.

The Bank may accept any form of collateral security against its advances, including real property.

The Industrial Development Bank is intended to supplement the activities of other lending agencies, not to compete with them, and the Act of incorporation requires that it should extend credit only when the Board of Directors is of the opinion that similar credit would not be available elsewhere on reasonable terms and conditions. The Bank is specifically prohibited from engaging in the business of deposit banking.

Section 2.—Currency

Subsection 1.—Notes and Coinage

Note Circulation.—The development by which bank notes became the chief circulating medium in Canada prior to 1935 is described in the 1938 Year Book, pp. 900-905. Those features of the development which then became permanent are outlined in the 1941 Year Book, pp. 809-810.

When the Bank of Canada commenced operations in 1935 it assumed liability for Dominion notes outstanding. These were replaced in public circulation and partly replaced in cash reserves by the Bank's legal tender notes in denominations of \$1, \$2, \$5, \$10, \$20, \$50 and \$100. Deposits of chartered banks at the Bank of Canada completed the replacement of the old Dominion notes of \$1,000 to \$50,000 denomination that had previously been used as cash reserves.

The chartered banks were required under the Bank Act of 1934 to reduce gradually the issue of their own bank notes during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced. Further restrictions introduced by the 1944 revision of the Bank Act cancelled the right of chartered banks to issue or re-issue notes after Jan. 1, 1945, and in January 1950 the chartered banks' liability for such of their notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada in return for payment of a like sum to the Bank of Canada.

Coinage.*—Under the Currency, Mint and Exchange Fund Act (R.S.C. 1952, c. 315), gold coins may be issued in denominations of twenty dollars, ten dollars and five dollars (nine-tenths fine or millesimal fineness, 900). Subsidiary coins include: silver coins in denominations of one dollar, 50 cents, 25 cents, 10 cents (eight-tenths fine or millesimal fineness, 800); pure nickel five-cent coins; and bronze (copper, tin and zinc) one-cent coins. Provision is made for the temporary alteration of composition in event of a shortage of prescribed metals. A tender of payment of money in coins is a legal tender in the case of gold coins for the payment of any amount; in the case of silver coins for the payment of an amount up to \$10; nickel coins for payment up to \$5; and bronze coins up to 25 cents.

4.—Canadian Coin in Circulation, as at Dec. 31, 1949-58

NOTE.—The figures shown are of net issues of coin. Figures from 1901 are given in the corresponding table of previous Year Books beginning with the 1927-28 edition.

¹ Tombac, a copper-zinc alloy, was used to conserve nickel for war purposes; no coins of this metal have been issued since 1944.

² Based on estimates of population as given at pp. 162-163.

The Royal Canadian Mint.*—The Mint at Ottawa was established as a branch of the Royal Mint under the (Imperial) Coinage Act 1870 and opened on Jan. 2, 1908. In 1931 (21-22 Geo. V, c. 48) it was constituted a branch of the Canadian Department of Finance and has since operated as the Royal Canadian Mint. From 1858 the British North American provinces, and later Canada, obtained their coins from the Royal Mint at London or from The Mint, Birmingham, England. Before that date, coins were mainly British, United States and Spanish. In its earlier years the operations of the Mint in Canada were confined to the production of gold, silver and bronze coins for domestic circulation and of British sovereigns and small coins struck under contract for Newfoundland and Jamaica.

Before 1914 only small quantities of gold bullion were refined but during World War I the Mint came to the assistance of the British Government by establishing a refinery in which nearly 20,000,000 oz. t. of South African gold were treated on Bank of England

* Revised by the Master of the Royal Canadian Mint, Ottawa.

account. The subsequent development of the gold mining industry in Canada resulted in gold refining becoming one of the principal activities of the Mint. Fine gold produced from the rough bullion shipments received from the mines is purchased by the Mint and later delivered to the Bank of Canada for account of the Minister of Finance in bars of approximately 400 oz. t. each or, for those mines authorized to sell gold in the open market, the bullion is shipped to various domestic and foreign processors. The fine silver extracted from the rough gold is generally used for coinage purposes.

¹ Less total float, i.e., cheques and other items in transit.

² The deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes were reclassified from "personal savings deposits" to "other notice deposits" as at Sept. 30, 1957, in the returns of the banks to the Department of Finance; from that date the figures are thus not comparable with those for previous years. The amount of deposits reclassified was approximately \$140,000,000.

Section 3.—Commercial Banking

As one of the chief functions of the early banks in Canada was to issue notes to provide a convenient currency or circulating medium, it has been expedient to cover both currency and banking in one historical sketch, which is given in the 1938 Year Book, pp. 900-905. A list of the banks at Confederation appears in the 1940 Year Book, p. 897, and bank absorptions since 1867 are given in the 1941 edition, pp. 812-813. A table in the 1937 Year Book, pp. 894-895, shows the insolvencies since Confederation; the last insolvency occurred in 1923.

Subsection 1.—Chartered Banks

Canadian commercial banks are chartered or licensed by the Government of Canada and operate under one federal statute—the Bank Act—which is revised every ten years and brought into line with changing economic conditions. In addition to conducting a commercial banking business the chartered banks hold most of the public's savings deposits. The last revision of the Bank Act took place in 1954. An outline of the revisions made at that time is given in the 1956 Year Book, pp. 1109-1110.

Branches of Chartered Banks.—Although there are fewer chartered banks now than at the beginning of the century, there has been a great increase in the number of branch banking offices. As a result of amalgamations, the number of banks declined from 34 in 1901 to 10 in 1931, and remained at that figure until the incorporation of a new bank—the Mercantile Bank of Canada—in 1953 brought the total to 11. Since then the amalgamation in 1955 of the Bank of Toronto and the Dominion Bank as the Toronto-Dominion Bank, and the amalgamation of Barclays Bank (Canada) with the Imperial Bank of Canada in 1956 has reduced this number to nine. The number of branches of chartered banks in each province from 1868 is given in Table 7.

7.—Branches of Chartered Banks, by Province, as at Dec. 31 for Certain Years 1868-1958

NOTE.—Figures for 1920 and subsequent years include sub-agencies in Canada receiving deposits for the banks employing them; there were 733 such sub-agencies in 1958.

Financial Statistics of the Chartered Banks.—The classification of chartered bank assets and liabilities was revised by the Bank of Canada Act 1954, so that some of the statistics given in the following tables are not comparable with those appearing in

earlier editions of the Year Book. Figures shown in Table 10 prior to July 1954 have been adjusted to comply with the new classification. Month-end data are available from Dec. 31, 1954, to date in the Bank of Canada *Statistical Summary*.

1953.....	627	256	883	8,624	10.2
1954—January to June.....	634	260	894	8,820	10.1
1954—July to December.....	525	286	811	9,097	8.9
1955.....	541	293	834	9,915	8.4
1956.....	548	325	873	10,527	8.3
1957.....	535	335	870	10,601	8.2
1958.....	607	336	943	11,542	8.2

¹ From July 1954 the figures are not adjusted for items in transit and are not strictly comparable with the figures for earlier periods. ² Prior to July 1, 1954, the statutory minimum requirement was 5 p.c. for each day; since that date it has been a monthly average of 8 p.c.

ASSETS AND LIABILITIES OF CHARTERED BANKS, 1957-58

MAJOR ASSETS

* Excluding Canadian day-to-day loans.

DEPOSIT LIABILITIES

* Excludes Government of Canada deposits.

† The deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes were reclassified from "personal saving deposits" to "other deposits" as at Sept. 30, 1957. The amount of deposits reclassified was approximately \$140,000,000.

Liquid Asset Ratio.—In the course of discussions with the chartered banks in November and December 1955, the Bank of Canada urged the adoption of a standard practice regarding the maintenance of a minimum ratio of liquid assets (cash, day-to-day loans and treasury bills) to deposits. The purpose of this suggestion was to establish a working principle of bank operations which would help the central bank in the task of restraining inflationary pressures that might threaten in the future. After discussion the banks agreed to work to achieve by May 31, 1956, a minimum liquid asset ratio of 15 p.c. which they would endeavour to maintain on a daily average basis from June on. On this basis, fluctuations above or below 15 p.c. might occur from day to day or week to week, but for the month as a whole the average would not be below the target ratio. From June 1956 the banks have maintained a daily average ratio of at least 15 p.c.

¹ Includes figures for an 11-month period for two banks (accounting on the average for 7.3 p.c. of total bank assets) that changed their financial year-ends from Nov. 30 to Oct. 31. ² Realized profits and losses on disposal of securities are included in operating earnings. ³ Before provision for income taxes, losses, and transfers to inner reserves. ⁴ Includes taxes other than income taxes. ⁵ Profits and losses on sale of fixed assets and adjustments relating to prior years. ⁶ After amounts retransferred to rest account. ⁷ Includes income taxes on taxable portion of additions to and amounts retransferred from inner reserves, and foreign income taxes. ⁸ Including increases of \$400,000 in rest account and \$1,500,000 in capital paid up which represented the capital of a bank that commenced business in December 1953.

Cheque Payments.—A monthly record of the amounts of cheques charged to customer accounts at all chartered bank offices in 35 major clearing-house centres of Canada is available from 1924. Except for a minor setback in 1938, the value of cheques cashed shows a continuously upward trend from 1932, the low point of the depression years. The total of \$221,289,954,000 in 1958 was a record, 616 p.c. greater than in 1938; the increase equalled the gain in gross national product during the same period. The advance was well distributed throughout Canada's five economic areas. British Columbia showed the largest gain in this comparison with an increase of 739 p.c. The Prairie Provinces were second with an advance of 654 p.c., followed in order by Ontario, the Atlantic Provinces and Quebec.* As compared with 1957, four of the five areas showed gains, with Ontario accounting for nearly 65 p.c. of the \$15,938,000,000 advance.

Value of cheques cashed in 28 centres was higher in 1958 than in 1957. Payments in the two leading centres reached all-time peaks, Toronto advancing nearly 12 p.c. and Montreal over 5 p.c. In the same comparison Winnipeg rose 16.5 p.c. and Vancouver declined nearly 3 p.c.

* St. John's, Nfld., was included in the 1958 figure but not in 1938 data. Excluding this centre in 1958 the ranking would be: British Columbia, the Prairie Provinces, Ontario, Quebec and the Maritime Provinces.

16.—Cheques Cashed at 35 Clearing-House Centres, 1954-58

NOTE.—Figures for earlier years will be found in the corresponding table of previous Year Books.

¹ Includes some debits reported in preceding years.

Subsection 2.—Government and Other Banking Institutions

There are three distinct types of savings banks in Canada in addition to the savings departments of the chartered banks and of trust and loan companies: (1) the Post Office Savings Bank, in which deposits are a direct obligation of the Government of Canada; (2) Provincial Government savings banking institutions in Newfoundland, Ontario and Alberta, where the depositor becomes a direct creditor of the province; and (3) two important savings banks in the Province of Quebec—the Montreal City and District Savings Bank and La Banque d'Économie de Québec—established under federal legislation and reporting monthly to the Federal Department of Finance. In addition, co-operative credit unions encourage savings among low-income classes and extend small loans to their members.

Post Office Savings Bank.—The Post Office Savings Bank was established under the Post Office Act of 1867 (31 Vict., c. 10) to "enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the nation to every depositor for repayment of all money deposited by him together with the interest due thereon". Branches of the Government of Canada's Savings Bank under the Department of Finance were gradually amalgamated with this Bank over a period of 50 years and the amalgamation was completed in March 1929. Summary financial statistics for the years ended Mar. 31, 1954-58, follow. Figures back to 1868 are available in previous editions of the Year Book.

The number of accounts decreased from 35,527 at Mar. 31, 1958, to 35,187 at the same date of 1959; deposits increased from \$27,607,959 to \$28,307,692 in the same comparison. On Apr. 1, 1957, the interest rates payable on deposits of private individuals, trust funds and estates were increased from 2½ p.c. to 3 p.c. per annum in respect of all amounts in excess of \$5,000.

Ontario.—The establishment of the Province of Ontario Savings Office was authorized by the Ontario Legislature at the 1921 Session and the first branches were opened in March 1922. Interest at the rate of $2\frac{1}{2}$ p.c. and $2\frac{3}{4}$ p.c. per annum, compounded half-yearly, is paid on accounts, and deposits are repayable on demand. Total deposits at Mar. 31, 1958, were \$81,400,000 and the number of depositors was approximately 97,000. Twenty-one branches were in operation throughout the province.

Alberta.—Savings deposits are accepted at 49 Provincial Treasury Branches throughout Alberta. The total of these deposits at Mar. 31, 1958, was \$25,952,879, payable on demand and bearing interest at $2\frac{3}{4}$ p.c. per annum.

The Provincial Treasury has issued demand certificates bearing interest at $1\frac{1}{2}$ p.c. or term certificates for one, two, three, four or five years in denominations of \$25 and upwards, bearing interest at 2 p.c. for one or two years, $2\frac{1}{2}$ p.c. for three or four years and $2\frac{3}{4}$ p.c. for five years. The total amount in savings certificates at Mar. 31, 1958, was \$1,960, made up of \$860 in demand certificates and \$1,100 in term certificates. Deposits from the public for the purchase of such certificates were discontinued as of April 1951.

Quebec Savings Banks.—The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871 had, at Mar. 31, 1958, a paid-up capital and reserve of \$8,750,000, savings deposits of \$227,342,163 and total liabilities of \$238,473,115. Total assets amounted to \$238,473,115, including over \$161,000,000 of federal, provincial and municipal securities. La Banque d'Économie de Québec, founded in 1848 (as La Caisse d'Économie de Notre-Dame de Québec) under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855 and given a federal charter by 34 Vict., c. 7, had, at Mar. 31, 1958, savings deposits of \$39,243,261 and a paid-up capital and reserve of \$3,000,000. Liabilities amounted to \$47,406,437 and total assets to a like amount.

The following statement shows the combined savings deposits in the Montreal City and District Savings Bank and La Banque D'Économie de Québec for the years ended Mar. 31, 1949-58. Figures back to 1868 are available in previous editions of the Year Book.

Credit Unions.*—Credit unions are incorporated under provincial law to enable groups of people with a common bond of association to pool their savings. Their importance among the savings and loan institutions in Canada continued to grow in 1957 with a membership increase of over 200,000. Thirty-eight per cent of the credit unions are rural. Membership has passed 2,000,000 with assets of \$846,000,000 or an average per member of \$400. The number of credit unions has almost doubled during the postwar period and the membership has increased threefold. Almost half of the membership is in Quebec and Ontario. In the former province assets are mostly held in the form of deposits, while in Ontario the major part of the assets are in shares.

Loans are granted to members for provident and productive purposes from the accumulated pooled savings and are mostly secured by personal notes. Loans to members in 1957 amounted to \$351,431,148, at interest rates of 1 p.c. per month or less on the unpaid balance. There were 27 central credit unions in 1957 having the main purpose of acting as credit unions for credit unions, namely, to receive deposits from and make loans to individual credit unions. These centrals are incorporated under provincial legislation to facilitate the flow of funds to credit unions that cannot meet the demand for local loans. Some of these central credit unions admit co-operative associations to membership but most of them limit their membership to credit unions.

* Prepared by the Economics Division, Marketing Service, Department of Agriculture, Ottawa.

The Canadian Co-operative Society serves as a central credit union for provincial centrals and co-operatives all across Canada.

Section 4.—Foreign Exchange

The dollar, established officially as the currency of the united provinces of Canada on Jan. 1, 1858, and extended to cover the New Dominion by the Uniform Currency Act of 1870, was defined as 15/73 of the British gold sovereign.* That is, the par rate of exchange between the dollar and the pound sterling was fixed at \$4.866, making the

* The gold sovereign remained the standard for the Canadian dollar until 1910 when the currency was defined in terms of fine gold, making it the exact gold equivalent of the United States dollar. Both British and United States gold coins were, however, legal tender in Canada for this whole period.

Canadian currency the equivalent of the United States dollar at parity. With minor variations between the import and export gold points representing the cost of shipping gold in either direction, the value of the pound sterling in Canada remained at this level until the outbreak of World War I. The United States dollar, on the other hand, was at a discount in terms of Canadian funds for the first eleven years after Confederation since it was not redeemable in gold from February 1862 to January 1879. On the basis of gold equivalents it would appear that the greatest monthly average discount on the United States dollar after Confederation was approximately 31 p.c., reached in August 1868. From 1879 to 1914 the dollars of the two countries remained at par, varying only within the gold points or under \$2 per thousand.

On the outbreak of World War I, Canada and the United Kingdom suspended the gold standard. For some weeks both the pound and the Canadian dollar rose to a premium in New York. Subsequently both fell back with the pound going to a slight discount. In January 1916 the pound was officially pegged at \$4.76 in American funds. This level was maintained with the help of funds realized by sales of United States securities owned by residents of the United Kingdom, by borrowing in the United States and, after the American entry into the War, by the United States Government financing Allied purchases in that country.

From 1915 to the end of 1917 fluctuations in the rate of exchange between the Canadian and United States dollars did not exceed 2 p.c. on either side of parity; the pound was stable in terms of United States dollars during this period. In 1918 the Canadian dollar began to weaken. After the pound was unpegged in 1919 the Canadian dollar declined further and in 1920 it fell to 82 cents in New York with sterling going as low as \$3.18.

By the latter half of 1922 the Canadian dollar had returned practically to par in New York. Despite some further weakness in sterling, the dollar remained close to that level during the next two years, averaging 98.04 and 98.73 cents in terms of the United States dollar in 1923 and 1924, respectively, and fluctuating between a discount of about 3.6 cents and a premium of approximately 0.4 cents. After the United Kingdom resumed gold payments in April 1925, the range of fluctuation of the Canadian dollar narrowed further. From Canada's return to the gold standard in the period July 1, 1926 to January 1929, the exchange rate remained within the gold points. The Canadian dollar then went to a slight discount in New York. With the exception of the period July to November 1930, when it went to a small premium in New York, the dollar remained below parity until the United Kingdom abandoned the gold standard in September 1931. After that month the pound sterling depreciated sharply and the Canadian dollar followed, reaching lows* in New York of 80.5 cents in December 1931 and 82.6 cents in April 1933.

Following the prohibition of gold exports in the latter month by the United States, the pound and the Canadian dollar strengthened rapidly in terms of American funds. By November 1933, both currencies had reached a premium in New York. Meanwhile in a series of steps beginning with permitting the export of newly mined gold in August 1933, the United States moved towards resumption of the gold standard. As of Feb. 1, 1934, the United States Treasury undertook to buy all gold offered at \$35 per ounce. After that the exchange rate between the Canadian and United States dollar stabilized. Until the outbreak of war in 1939 much of the trading was conducted within one cent of parity although the Canadian dollar in New York did go as high as 103.6 cents (September 1934) and as low as 98.0 cents (September 1938).*

On the outbreak of World War II in September 1939, the United Kingdom and other sterling countries introduced foreign exchange control involving fixed buying and selling rates of \$4.02½ and \$4.03½, respectively, in terms of the U.S. dollar. The Canadian dollar in New York declined until Sept. 16, 1939, when the Government instituted foreign exchange control† in Canada and established fixed buying and selling rates of \$1.10 to

* Noon quotations. Daily highs and lows may have exceeded these rates.

† The operations of the Foreign Exchange Control Board from the time of its establishment to the termination of exchange control in December 1951 are reviewed in previous editions of the Year Book.

\$1.11 for the U.S. dollar and \$4.43 to \$4.47 for sterling. As compared with previous months, the depreciation of the Canadian dollar in terms of United States funds was approximately half as great as that of the pound sterling.

Apart from a minor adjustment on Oct. 15, 1945, when selling rates for U.S. dollars and sterling were lowered to \$1.10½ and \$4.45, respectively, the official rates for the Canadian dollar remained unchanged until July 5, 1946. At that time the rate on the U.S. dollar was restored to par, with buying and selling rates for that currency of \$1.00 to \$1.00½ and for sterling \$4.02 to \$4.04. These rates continued in effect until Sept. 19, 1949, when, following a 30.5-p.c. reduction by the United Kingdom in the value of sterling to \$2.80 U.S. (an action which was paralleled in varying degrees by numerous other currencies), Canada returned to the former official rates of \$1.10 and \$1.10½ for United States funds. Sterling was quoted at \$3.07½ and \$3.08½ on the basis of the New York cross rate.

On Sept. 30, 1950, the Minister of Finance announced that official fixed foreign exchange rates which had been in effect at varying levels since 1939 would be withdrawn effective Oct. 2. Since then the Government's policy has been to allow the rate to be determined by the normal play of economic forces without official intervention by the Exchange Fund Account except to ensure orderly conditions in the foreign exchange market. No attempt is made to reverse persistent trends, but only to smooth out excessive short-run fluctuations.

Until Dec. 14, 1951, this policy was carried out within the framework of exchange control. On that date the Foreign Exchange Control regulations were revoked by the Governor in Council and new regulations were passed which exempted all persons and transactions from the various requirements of the Foreign Exchange Control Act. These actions terminated exchange control in Canada and the Foreign Exchange Control Act was repealed in 1952.

The movements of the U.S. dollar in Canadian funds from January 1951 to the end of 1958 are shown in Table 19. After the major change that occurred early in 1952, the U.S. dollar fluctuated within a comparatively narrow range between a low of 95.98 cents in September 1952 and a high of 99.95 in December 1955. In the second quarter of 1956, however, the U.S. dollar began to weaken and this movement continued into the third quarter of 1957. The previous postwar low (95.9 cents) was passed in February 1957 and by August 1957 the U.S. dollar had fallen to 94.8 cents, a record low for the present century. In the last four months of 1957 the U.S. dollar rose again, reached 98.47 cents in January 1958 and closed the year at 96.46.

¹ Excludes \$18,200,000 borrowed in the United States in August 1949 and set aside for the retirement on Feb. 1, 1950, of a security issue guaranteed by the Federal Government and payable at the holder's option in U.S. dollars.

PART II.—MISCELLANEOUS COMMERCIAL FINANCE

Section 1.—Loan and Trust Companies*

An outline of the development of loan and trust companies in Canada from 1844 to 1913 is given in the 1934-35 Year Book, p. 993. The laws relating to loan and trust companies were revised by the Loan and Trust Companies Acts of 1914 (R.S.C. 1952, cc. 170 and 272), with the result that the statistics of provincially incorporated loan and trust companies ceased to be collected. However, summary information has been supplied by provincial companies since 1922 and figures for the years 1956 and 1957 are included in Table 1 in order to complete the statistics for loan and trust companies throughout Canada. It is estimated that more than 95 p.c. of the business of provincial companies is represented in the figures, so that they may be accepted as fairly inclusive and representative of the volume of business transacted as compared with the federally licensed companies.

The statistics of Tables 2 and 3 refer to those companies incorporated both by the Government of Canada and by the provinces. Included in the statistics of federal companies are data of loan and trust companies incorporated by the Province of Nova Scotia and brought by the laws of that province under the examination of the federal Department of Insurance, as well as data for trust companies in New Brunswick and Manitoba.

The progress of the aggregate of loan company business in Canada is indicated by the increase in the book value of the assets of all loan companies from \$188,186,072 in 1923 to \$549,071,796 in 1957. The assets of trust companies (not including estates, trust and agency funds, which cannot be regarded as assets in the same sense as company and guaranteed funds) increased from \$154,202,165 in 1928 to \$785,744,424 in 1957. In the former year the total of estates, trust and agency funds administered amounted to \$1,077,953,643 and in 1957 to \$5,582,378,426.

Functions of Loan Companies.—The principal function of loan companies is the lending of funds on first-mortgage security, the money thus made available for development purposes being secured mainly by the sale of debentures to the investing public and by savings department deposits. The extent of investments in mortgages by federal and provincial loan companies may be gauged by the following figures: total assets of such companies for the years 1956 and 1957 amounted to \$437,169,171 and \$549,071,796,

* Revised under the direction of the Superintendent of Insurance for Canada, Ottawa.

respectively, which amounts include mortgage loans of \$331,433,425 and \$420,635,499, respectively; thus, the resulting percentages of mortgages to total assets for those years were approximately 76 p.c. and 77 p.c., respectively. The data for 1957 includes for the first time the figures of one loan company incorporated under the laws of Quebec (the capital stock of which has been issued largely outside of Canada but whose debentures for the greater part are now held in Canada) having, as at Dec. 31, 1957, assets of \$80,419,250 including mortgage loans amounting to \$69,677,253, and liabilities to the public of \$48,480,797.

Functions of Trust Companies.—Trust companies act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents or attorneys in the management of the estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies, as transfer agents and registrars for stocks and bond issues, as trustees for bond issues and, where so appointed, as authorized trustees in bankruptcy. Such companies receive deposits for investment but the investing and lending of such deposits and of actual trust funds are restricted by law.

Statistics of Loan and Trust Companies.—A summary of operations of provincial and federal loan and trust companies is given in Table 1. As a result of the nature of the operations of the latter companies, which are intimately connected with the matter of probate, the larger trust companies usually choose to operate under provincial charters and the provincial figures represent much larger amounts than those of the federal companies.

The figures for federal loan companies include companies chartered by the Government of Nova Scotia which, by arrangement, come under inspection by the federal Department of Insurance. The data for federal trust companies cover companies chartered by the Governments of Nova Scotia, New Brunswick and Manitoba for the same reason.

1.—Operations of Provincial and Federal Loan and Trust Companies, as at Dec. 31, 1956 and 1957

¹ Includes companies chartered by the Governments of Nova Scotia, New Brunswick and Manitoba which, by arrangement, are inspected by the federal Department of Insurance. ² Excludes provincial companies of Nova Scotia, New Brunswick and Manitoba which are included in federal companies.

Section 2.—Licensed Small Loans Companies and Licensed Money-Lenders*

Licensed small loans companies and licensed money-lenders are subject to the provisions of the Small Loans Act (R.S.C. 1952, c. 251) as amended by c. 46 of the Statutes of 1956, an enactment of the Parliament of Canada regulating personal loans not in excess of \$1,500 made on the security of promissory notes of borrowers. Most of these notes are additionally secured by endorsements or chattel mortgages. The Act permits, in the case of licensed lenders, maximum rates of cost of loan, including charges of every kind, of 2 p.c. per month on that portion of the unpaid balance of a loan not exceeding \$300, 1 p.c. per month on that portion of the balance exceeding \$300 but not exceeding \$1,000, and one-half of 1 p.c. per month on any remainder of the balance exceeding \$1,000. The maximum rate permitted to be charged by an unlicensed lender is 1 p.c. per month. Prior to Jan. 1, 1957, the scope of the Act extended only to loans of \$500 and under and the maximum rate permitted to be charged by licensed lenders was 2 p.c. per month and by unlicensed lenders 12 p.c. per annum. The small loans companies—four in number—were incorporated by special Acts of the Parliament of Canada, the first such company commencing business in 1928. Money-lenders, of which there are 75, are made up of companies otherwise incorporated and include a few partnerships and individuals. Table 5 gives the combined financial experience of small loans companies and licensed money-lenders for the years 1954-57.

* Further details are given in the Department of Insurance report *Small Loans Companies and Money-Lenders* for the year ended Dec. 31, 1957.

¹ Commencing Jan. 1, 1957, the Small Loans Act became applicable to loans of \$1,500 and under made on and after that date (see text above).

The increase in the scope of the Act resulted in a very large increase in the number and the amount of small loans made and in the number and amount of small loan balances outstanding during 1957 as compared with 1956. During 1957, 1,075,322 small loans valued at \$368,392,107 were made as against 844,348 loans amounting to \$184,293,692 in 1956. The average small loan was approximately \$343 in 1957. At the end of that year small loans outstanding numbered 812,135 for an amount of \$229,199,629 or an average of \$282; at the end of 1956 the outstanding loans numbered 543,394 and amounted to \$88,428,203 or an average of \$163 per loan.

Section 3.—Sales of Canadian Bonds*

Previous editions of the Year Book have traced the sales of Canadian bonds to the end of 1956. This review continues the record of new issues placed through the years 1957 and 1958.

New issues came on the bond market in 1957 and 1958 at a higher rate than in previous years and found a fairly ready acceptance in view of recessionary trends. In 1958, however, there were two distinctive trends not shown by the accompanying statistics. Principal emphasis was on the refunding of a major portion of Canada's long-term debt and a very significant increase in the weekly treasury bill issues as representing short-term financing of less than one year. The refunding operation is dealt with separately on pp. 1130-1131.

In the flotation of new issues, offerings of Canadian bonds and debentures in 1957 (excluding all refunding and new issues with a term to maturity of less than one year) totalled \$4,495,044,738, up sharply from 1956. In 1958, the comparative total advanced still higher to \$4,550,033,925 and both totals were over the previous peak of \$4,468,983,364 in 1954. Advances for 1957 and 1958 were caused by increases in all categories of new issues placed with the exception of corporate sales which were down from the record peak reached in 1957.

Excluded from the statistical calculations in this review are federal short-term issues in the form of treasury bills with a maturity of less than one year, which amounted to \$6,530,000,000 in 1957 and \$6,761,000,000 in 1958. With these issues included, the totals would be \$11,025,044,738 and \$11,311,033,925, respectively, and if the amount of \$5,805,519,850 for the Canada Conversion Loan were also added to the 1958 figure, the grand total for the year would be \$17,116,553,775, placing it in a completely unique position.

Excluding all such refunding and short-term financing of less than one year, federal and guaranteed sales amounted to \$2,468,787,450 in 1957 and \$2,566,000,000 in 1958, compared with \$1,357,000,000 in 1956. A very considerable amount of new capital was acquired by public subscription to Canada Savings Bonds, Series 12 (1957) and Series 13 (1958). These series, while similar in many respects to previous issues, reflected the upward movement in interest rates.

Canada Savings Loan, Series 12, matures on Nov. 1, 1970, and bears interest at a rate of $3\frac{1}{4}$ p.c. for the first two years and at a rate of $4\frac{1}{2}$ p.c. for the remaining eleven years, giving an over-all yield, if held to maturity, of 4.46 p.c. Series 13 matures on Nov. 1, 1973, and bears interest at a rate of $3\frac{1}{2}$ p.c. for the first year and at a rate of $4\frac{1}{2}$ p.c. for the remaining fourteen years, giving an over-all yield, if held to maturity, of 4.19 p.c. Table 6 gives total sales, number of applications, and limits per individual for all Canada Savings Loan issues from 1946 to 1958.

* Prepared by E. C. Gould, Financial Editor, *The Monetary Times*.

6.—Sales of Canada Savings Loans, 1946-58¹

Series	Applications	Limits per Individual	Total Sales
	No.	\$	\$
Series 1, 1946.....	1,248,444	2,000	535,285,550
Series 2, 1947.....	910,742	1,000	287,733,100
Series 3, 1948.....	862,686	1,000	260,491,150
Series 4, 1949.....	1,015,579	1,000	320,200,000
Series 5, 1950.....	963,048	1,000	285,600,000
Series 6, 1951.....	986,900	5,000	394,642,400
Series 7, 1952.....	982,274	5,000	380,761,100
Series 8, 1953.....	1,267,506	5,000	850,548,900
Series 9, 1954.....	1,175,264	5,000	800,540,900
Series 10, 1955.....	1,180,000	5,000	729,100,000
Series 11, 1956.....	1,242,250	5,000	853,810,150
Series 12, 1957.....	1,293,148	10,000	1,216,706,500
Series 13, 1958.....	1,134,673	10,000	865,163,400

¹ Figures for the issues 1946-56 are for the entire loans, i.e., either to the year-end or to the closing date within the year or in the subsequent year. The figure for Series 12 (1957) is to Dec. 31, 1957, and the figure for Series 13 (1958) is to Dec. 31, 1958.

In the category of combined direct and guaranteed financing by Canadian provinces, the totals for 1957 and 1958 at \$645,959,500 and \$791,271,000, respectively, were both higher than for 1956 at \$557,888,000 or any of the previous years. Of the 1957 total \$175,750,000 was for direct provincial financing and the remainder of \$470,209,500 represented provincial guarantees for utility, municipal and parochial issues. Of the 1958 total, \$290,800,000 represented direct provincial financing and \$500,471,000 was of a guaranteed nature.

Provinces which directly entered the bond market in 1957 and 1958 included:—

Province	Month	Amount	Province	Month	Amount
		\$'000			\$'000
1957—			1958—

In the field of direct municipal financing (i.e., exclusive of municipal financing guaranteed by various provinces) the market for new issues held up well in 1957 and 1958. Local improvements constituted the principal purposes for such borrowing, the most important being new schools and waterworks. When flotations for parochial school purposes are included, total municipal sales amounted to \$355,693,688 in 1957 and \$463,507,925 in 1958, both higher than the total of \$318,597,867 for 1956. The municipalities of Montreal, Toronto, Ottawa, Hamilton, Winnipeg, Regina, Calgary, Edmonton, and Vancouver were among the most important borrowers during these two years.

During 1957 and 1958, corporate financing totalled \$1,024,604,100 and \$729,255,000, respectively, and compared with a total of \$860,184,000 in 1956. The record total in 1957 was attributed to the large number of plans for industrial expansion with emphasis on pipeline financing. Since a general slow-down of business activity began towards the end of 1957 and continued into the following year, this decline was reflected in the number and amount of new corporate issues placed. As a result, corporate financing for 1958 was well below that of 1957 and 1956 but was higher than for all previous years.

In the corporate domain, as in the municipal area, the new issue market was much more active during the first part of 1958 than in the later months. New money borrowed in the domestic market included \$50,000,000 by British Columbia Electric Company Limited, \$40,000,000 by Canadian Pacific Railway Company, \$30,000,000 by The Alberta Gas Trunk Line Company, and \$25,000,000 by Algoma Steel Corporation Limited. New corporate money borrowed in the United States included \$50,000,000 of Bell Telephone Company of Canada bonds and \$30,000,000 of Pacific Petroleum debentures, carrying stock purchase warrants.

Sales of provincial government and municipal bonds in the United States showed a moderate increase during 1958 while new issues of Canadian corporate bonds declined sharply to about 30 p.c. of the 1957 level. These trends were caused partly by the pipeline financing done in 1957 and partly by more favourable Canadian interest rates in 1958. As an over-all result, all new issues placed in the United States totalled \$482,077,621 in 1958, compared with \$606,876,100 in 1957 and \$470,532,982 in 1956.

Variations in the volume of Canadian financing done in the United States have involved a consideration of three essential factors: the comparative levels of interest rates; variations in exchange rates; and the volume of financing required in relation to available money supply. When all factors are evaluated, however, interest and exchange rates must take second place to money supply. Thus, most of the United States financing undertaken by Canadian governments and corporations has been by users who required more money than they were able to raise on the Canadian market.

During the years 1957 and 1958, a continued trend to lower prices caused a wide range of comment about future markets for Canadian bonds. Apparently, a big factor forcing investors out of bonds and into equities was the continued inflation which caused doubts about the stability of real dollar values. In contrast, however, there was a marked public confidence in the Conversion Loan, in Savings Bonds, and in most other fields of security financing as a way to desirable economic expansion. Should investors ultimately come to believe that inflationary pressures are only a temporary threat, further advances can certainly be expected in the volume of new issues placed.

¹ Excludes treasury bills, deposit certificates and other financing for a term of less than one year and the Canada Conversion Loan of 1958.

THE CANADA CONVERSION LOAN*

The largest financing ever undertaken in Canada, the Canada Conversion Loan of 1958, merits explanation concerning the nature of this refunding and the principal objectives involved. The series for refunding covered the 5th to 9th Victory Loans, which were issued during World War II and matured at various dates from Jan. 1, 1959 to Sept. 1, 1966. The actual amount of these series outstanding was \$6,415,880,350, representing 60 p.c. of the outstanding funded debt, excluding special categories of treasury bills and Canada Savings Bonds.

Of the amount outstanding, \$1,300,000,000 was held before conversion by the Bank of Canada, \$300,000,000 by the Unemployment Insurance Commission, \$100,000,000 in government accounts, \$1,400,000,000 by the chartered banks and \$3,300,000,000 was held by insurance companies, trust and loan institutions, other corporations, and individuals.

Statistics on individual ownership of Victory Bonds were given in the 1957-58 Year Book, p. 1162, where it was indicated that holdings of the 5th to 9th Victory Loans were held about equally by individuals and corporations at the time the various issues were sold. Of course, the nature of holdings altered greatly between date of sale and conversion time in 1958 and it is safe to assume that many more Victory Bonds were sold by individuals to large corporations and government agencies than were originally acquired by them.

At the same time, it has been reliably reported that surprisingly large amounts of individual holdings were located when the conversion campaign got under way, the majority of them in rural areas. The unexpected number of such conversions emphasized that the process did not entirely represent financing by large corporations and government agencies to the exclusion of individual investors.

Because a principal objective was directed to the longest possible term, emphasis was placed on the 4½-p.c. 25-year bonds during the conversion campaign. It was further indicated, however, that "if desired", 4¼-p.c. 14-year bonds, or 3¼-p.c. 7-year bonds, or 3-p.c. 3¼-year bonds were available for investors desiring shorter maturities. The following statement, prepared by a Canadian investment house, summarizes information concerning the conversion offer. Of special interest are figures showing how bonus features of cash per \$1,000 bond were applied to various maturities.

* Prepared by E. C. Gould, Financial Editor, *The Monetary Times*.

Jan. 1, 1959.....	5	Jan. 1, 1959.....	3	{ 15.00	3½	Dec. 1, 1961
June 1, 1960.....	6	Dec. 1, 1958.....		{ 12.50		

Long-term features in the conversion issue were further emphasized by a non-callable feature. Unlike outstanding Victory Loans, the conversion bonds cannot be called by the Government before maturing date. Many students of Canadian finance have been inclined to believe that a former callable feature in the huge \$6,400,000,000 debt tended to weaken the Canadian bond market substantially.

In many respects, the Canada Conversion Loan of 1958 was somewhat in the nature of 'rights', which have long been used to encourage both stock and bond issues. During the campaign, holdings of Victory Bonds carried a right to retain them, to sell them to others, or to convert them into longer-term maturities at attractive bonuses under an exchange offer which expired on Sept. 15, 1958. This form of financing opened up the Conversion Loan to all investors, whether or not they actually owned Victory Bonds at the time of exchange.

When Victory Bonds were sold by their former owners because they wanted cash, they could be purchased by an investment house and used for customers who had none of their own but who wanted to buy into the conversion issue. As with most 'rights', however, there was a reward for investors who retained their original holdings. In general, the entire process might be defined as a 'face-for-face' voluntary exchange, plus an adjustment payment to compensate holders of Victory Bonds for taking new bonds that matured further into the future. The principal aim was to distribute a substantial part of the national debt by an extension of maturities over a much longer term from 6.0 to 10.6 years.

Latest available returns (Apr. 30, 1959) show that the total amount converted reached \$5,805,519,850. Of this total, the 3-p.c. 1961 issue accounted for \$1,020,514,000, the 3½-p.c. 1965 issue for \$1,266,723,100, the 4½-p.c. 1972 issue for \$1,366,733,800, and the 4¼-p.c. 1983 issue for \$2,151,548,950. When the total converted at \$5,805,519,850 is subtracted from that originally outstanding at \$6,415,880,350, the amount still held in Victory Bonds totalled \$610,360,500. The principal retention was by individuals and corporations with outstanding debts requiring a near-term liquidation.

It should be noted that the Canada Conversion Loan of 1958 was entirely of a refunding nature and did not involve new financing which was continued by the Federal Government as various expenditures had to be met. What the Government did, in effect, was to facilitate financing in all fields of security borrowing by applying on a gigantic scale the basic principle of federal debt consolidation.

CHAPTER XXV.—INSURANCE*

CONSPECTUS

Subsection 5. Life Insurance Effected and in Force Outside Canada by Canadian Companies under Federal Registration..	1141	SECTION 3. GOVERNMENT INSURANCE.....	1152

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Insurance, for the purpose of statistical analysis, is usually classified as life, fire and casualty. Most companies operate under Federal Government registration although some have provincial licences only. Also many fraternal orders and societies are engaged in this kind of business. The special articles relating to insurance that have appeared in previous editions of the Year Book are listed in Part II of Chapter XXVII under the heading "Insurance".

Section 1.—Life Insurance†

Life insurance in force in Canada with companies registered by the Federal Government (exclusive of fraternal benefit societies) amounted to over \$33,087,000,000 at the end of 1957, an increase of \$4,000,000,000 during the year. The ratio of gain in business in force expressed as a percentage of the amount in force at the beginning of the same year, which had hovered around 10 p.c. each year during the decade ending in 1955, increased to 14.3 p.c. in 1956 but in 1957 fell back slightly to 13.8 p.c.

Year	In Force at Beginning of Year	Increase in Force for the Year	Per- centage Gain
	\$	\$	
1930.....	6,157,000,000	335,000,000	5.4

1955.....	23,135,000,000	2,317,000,000	10.0
1956.....	25,452,000,000	3,635,000,000	14.3
1957.....	29,087,000,000	4,000,000,000	13.8

* Material in this Chapter, except as otherwise indicated, has been prepared under the direction of the Superintendent of Insurance for Canada, Ottawa. More detailed data are available in the Annual Reports of the Department of Insurance.

† All the amounts given in the tables of this Section are net amounts after deduction of reinsurance ceded.

Subsection 1.—Summary of Life Insurance in Canada

Tables 1 and 2 summarize insurance premiums, claims, amounts of new policies effected, and amounts of insurance in force on Dec. 31 for the years 1956 and 1957. These data are presented in Table 1 on the basis of the supervising government authorities for the companies and societies concerned, and the same data are presented in Table 2 classified on the basis of nationality of company or society and by supervising government authorities.

**Subsection 2.—Operational Statistics for Life Insurance Transacted in
Canada by Companies under Federal Registration**

The amount of life insurance in force in Canada has shown an almost continuous advance year by year since the beginning of the record in 1869. The amount per capita of the estimated population has more than doubled since the end of World War II—evidence of the general recognition of the value of life insurance for the adequate protection of dependants against misfortune. During 1957, life insurance business was transacted in Canada by 74 active companies having federal registration, including 32 Canadian, 8 British and 34 foreign companies. In addition there were 6 British and 4 foreign companies which wrote no new insurance during the year, their business being confined to policies already on their books. One other foreign company, first registered in 1957, transacted no business in Canada during the year.

The operations analysed in the tables of this Subsection, with the exception of Table 6, include only those companies under federal registration and are exclusive of fraternal organizations and provincial licensees. However, companies under federal registration account for about 93 p.c. of the life insurance in force in Canada.

3.—Life Insurance Effected and in Force in Canada by Companies under Federal Registration, Decennially 1880-1950 and Annually 1951-57

NOTE.—Figures for 1869-1900 are given in the 1938 Year Book, p. 958; for 1901-39 in the 1942 edition, p. 855; and for 1940-49 in the 1957-58 edition, p. 1168. Statistics of fraternal society insurance, excluded here, are given at pp. 1139-1141.

Subsection 3.—Finances of Companies Transacting Life Insurance under Federal Registration

The financial statistics in Tables 8 and 9 relate only to life insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising out of Canada as well as in Canada.

8.—Total Assets and Liabilities for Life Insurance of Canadian Companies under Federal Registration and Assets and Liabilities in Canada for Life Insurance of British and Foreign Companies under Federal Registration, 1955-57.

NOTE.—Beginning with 1954, the forms of annual statement for life insurance transacted by registered companies were different from those formerly required. For this reason, figures for 1954 and subsequent years are not strictly comparable with those for 1953 and previous years.

Subsection 4.—Life Insurance Effected through Fraternal Benefit Societies

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 10 gives statistics of life insurance effected through fraternal benefit societies by Canadian members and Table 11 shows statistics of assets, liabilities, income and expenditure relating to all business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries of Great Britain, of the Faculty of Actuaries in Scotland, or of the Society of Actuaries) and a readjustment of rates or benefits must be made, unless the actuary certifies to the solvency of each fund. The first sections of Tables 10 and 11 relate to the 16 Canadian societies registered by the federal Department of Insurance, only one of which does not grant life insurance benefits.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain authority from the Federal Government prior to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, though forbidden to accept new members,

were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies and some foreign societies that had not previously been licensed by the provinces have since obtained federal authority to transact business. During 1957, 31 foreign fraternal benefit societies transacted business in Canada; two of these societies do not grant life insurance benefits.

**Subsection 5.—Life Insurance Effectuated and in Force Outside Canada by
Canadian Companies under Federal Registration**

In this Subsection, there are given for the years 1955 and 1956 summary statistics of insurance effectuated and insurance in force at the end of the year in currencies other than Canadian dollars, as written by Canadian companies under federal registration. The statistics for individual companies are shown in Table 12 and for individual currencies in Table 13. The data given in both of these tables are in terms of Canadian dollars, the conversions from the various foreign currencies having been made at the book rates of exchange used by the various companies. Although these book rates of exchange do not follow the day-to-day fluctuations in the current rates of exchange, they are adjusted when necessary to keep them reasonably in line with the current rates.

Approximately 71 p.c. of all business in force in currencies other than Canadian is in United States currency and 17 p.c. is in sterling. From a slightly different point of view, approximately 25 p.c. of this business in force is in currencies of Commonwealth countries other than Canada, and 75 p.c. in currencies of foreign countries.

Canadian life insurance companies operating under federal registration at Dec. 31, 1956, had life insurance in force amounting to \$3,723,055,155 in countries outside Canada. Insurance in force in currencies other than Canadian dollars amounted to \$8,672,786,058; the difference between these figures is presumably the net amount of business in countries outside Canada transacted in Canadian currency. The business in force in Canada of Canadian companies registered by the Federal Government amounted to \$19,783,194,985 at Dec. 31, 1956, and the total business on the books of these companies, in and out of Canada, amounted to \$28,506,250,140. Thus, about 31 p.c. of the total business in force for Canadian companies registered by the Federal Government was in force in countries outside Canada.

In connection with their business outside Canada, the Canadian life insurance companies registered by the Federal Government held, at the end of 1956, Commonwealth and foreign investments in the amount of \$2,301,674,937.

12.—Life Insurance Effectuated and in Force for Canadian Companies (excluding Fraternal Societies) under Federal Registration, in Currencies other than Canadian Dollars, by Company, 1955 and 1956.

Section 2.—Fire and Casualty Insurance

At the end of 1957, there were 307 companies registered by the Federal Government to transact fire insurance (82 Canadian, 89 British, and 136 foreign). Of that number, 294 companies (76 Canadian, 88 British, and 130 foreign) were also registered to transact casualty insurance. Thus it may be seen that most companies registered by the Federal Government to transact fire insurance in Canada also transact casualty insurance.

At the end of 1957, there were 84 companies registered by the Federal Government to transact casualty insurance but not fire insurance (17 Canadian, 6 British, and 61 foreign).

The figures in the preceding two paragraphs include 52 companies that were also registered to transact life insurance, 11 of which were registered for fire, life and casualty insurance and 41 for life and casualty but not fire insurance.

It should be noted that, in addition to the companies registered by the Federal Government to transact casualty insurance, there were 23 registered fraternal benefit societies transacting accident and sickness insurance, of which 20 also transacted life insurance.

As shown in Table 14, some fire and casualty insurance is transacted in Canada by companies that are provincially licensed only. These companies generally confine their operations to the province of incorporation but may be allowed to sell insurance in other provinces. Many of them are mutual organizations transacting only fire insurance on a county, municipal, or parish basis.

Table 14, summarizes net premiums written and net claims incurred for the years 1956 and 1957 in the fields of fire insurance and casualty insurance in Canada. These data are presented on the basis of the supervising government authorities for the companies concerned. The table relates only to insurance companies; no data are included with respect to fraternal benefit societies.

Subsection 1.—Fire Insurance Transacted in Canada by Companies under Federal Registration

The net premiums written have increased very rapidly in recent years, having almost tripled since the end of the World War II. The net claims incurred have kept pace with this increase in net premiums written.

¹ Includes the Yukon and Northwest Territories, also certain 'floaters' business that cannot be apportioned to any one province.

Subsection 2.—Fire Losses

The information in Tables 17 to 20, which deals with the loss of property and life caused by fire, has been summarized from the annual *Statistical Report of Fire Losses in Canada* prepared by the Dominion Fire Commissioner, Department of Public Works. Federal losses not included in these figures amounted to \$4,338,728 in 1957 from 2,404 fires.

17.—Statistics of Fire Losses, 1946-57

NOTE.—Figures for 1926-45 are given in the 1947 Year Book, p. 1078. Figures from 1898 may be obtained from the Dominion Fire Commissioner, Department of Public Works.

¹ Excludes forest fires and Federal Government property losses.

² Includes Newfoundland.

The provincial property losses for 1954-57 given in Table 18 include both insured and uninsured losses. The percentages of the provincial totals uninsured in 1957 were: Prince Edward Island 37; Nova Scotia 30; New Brunswick 23; Quebec 15; Ontario 13; Manitoba 17; Saskatchewan 10; Alberta 4; British Columbia 34; and the Yukon and Northwest Territories 30. Uninsured losses formed 16 p.c. of the total losses for Canada.

Subsection 4.—Finances of Companies Transacting Fire and Casualty Insurance under Federal Registration

The financial statistics of Tables 22 to 25 relate to fire and casualty insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising out of Canada as well as in Canada.

22.—Total Assets for Fire and Casualty Insurance of Canadian Companies under Federal Registration and Assets in Canada for Fire and Casualty Insurance of British and Foreign Companies under Federal Registration, 1955-57.

Section 3.—Government Insurance

In addition to the insurance provided by private insurance companies, various types of government insurance schemes have been adopted in recent years by the federal and provincial governments.

Information on unemployment insurance, health insurance, veterans insurance, export credits insurance, etc., will be found in the appropriate Chapters on Labour, Health and Welfare, Foreign Trade, etc.

Provincial Insurance Schemes.*—Saskatchewan.—The Saskatchewan Government Insurance Office, a Crown corporation established by the Saskatchewan Government Insurance Act 1944, commenced business in May 1945; it deals in all lines of insurance other than sickness, life and hail.

It administers the Automobile Accident Insurance Act which provides compensation for the victims of automobile accidents as well as property damage in such accidents. The Act provides Saskatchewan residents with personal injury coverage without regard to liability and, in addition, all Saskatchewan motorists enjoy public liability and comprehensive protection including fire, theft and collision coverages.

The Office, under contract with the Saskatchewan Department of Natural Resources, offers insurance to farmers covering damage to unharvested crops by certain wildlife, such as ducks, geese, sandhill cranes, deer, elk, bear and antelope.

Information regarding the operation of the Saskatchewan Government Insurance Office or the Automobile Accident Insurance Act may be obtained from the Promotion and Advertising Department of the Saskatchewan Government Insurance Office, 11th and Cornwall Streets, Regina, Sask.

Alberta.—Provincial Government insurance in Alberta, coming within the purview of the Alberta Insurance Act, relates firstly to the Alberta General Insurance Company, in which the entire business of the fire branch of the Alberta Government Insurance Office was vested by the Legislature on Mar. 31, 1948, and secondly to the Life Insurance Company of Alberta, which was constituted on the same date to take over the life branch of the Alberta Government Insurance Office. Each company is administered by a separate board of directors. The Lieutenant-Governor in Council appoints the members to the respective boards but the charter of the Life Insurance Company of Alberta provides for the election of two policyholder directors. While both companies are Crown corporations, they are not entitled to the usual immunities of the Crown, since they may sue and be sued in any court of competent jurisdiction.

A variety of agencies in Alberta offer forms of prepaid protection corresponding to insurance but the nature of the enabling legislation governing these plans emphasizes the fact that they do not constitute insurance. Because such exemptions are specifically provided by the insurance laws of the province, reference to these plans is necessary only to make it clear that they do not come within the scope of the Alberta Insurance Act.

It should be noted that the Alberta Hail Insurance Act is administered by the Provincial Treasurer but none of the provisions of the Alberta Insurance Act apply to the Alberta Hail Insurance Board.

Information on insurance matters additional to that set out above may be obtained from the Superintendent of Insurance, Department of the Provincial Secretary, Edmonton, Alta.

* Revised by the respective provincial governments.

CHAPTER XXVI.—DEFENCE OF CANADA

CONSPECTUS

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

PART I.—THE ARMED SERVICES AND DEFENCE RESEARCH*

Section 1.—The Department of National Defence

The Minister of National Defence exercises control over and management of the Canadian Armed Forces, the Defence Research Board and other matters relating to national defence. Under his direction the three Chiefs of Staff are responsible for the control and administration of their respective Services and the Chairman of the Defence Research Board is responsible for research and development in defence matters. The Chairman of the Chiefs of Staff Committee, appointed in 1951, is responsible to the Minister for ensuring that all matters of joint defence and defence policy, in its widest sense, are carefully examined and co-ordinated before decisions are made.

The civilian administration of the Department is organized under the Deputy Minister and is constituted on a functional basis. The Deputy Minister maintains a continuing review and control over the financial aspects of operational policy, logistics, and personnel and administration. The Deputy Minister is assisted by an Associate Deputy Minister and four Assistant Deputy Ministers each of whom administers a division of the Deputy Minister's branch responsible for matters of: administration and personnel; construction, engineering and properties; finance; and supply. Also responsible to the Deputy Minister are: the Controller General of Inspection Services, the Judge Advocate General, the Chief Secretary and, where staff matters are concerned, the Director of Public Relations.

A number of committees meet at regular intervals to consider and advise on joint issues. These include:—

- (1) **Defence Council.**—Composed of the Minister of National Defence (Chairman), the Deputy Minister, the Chairman of the Chiefs of Staff Committee, the three Chiefs of Staff, the Chairman of the Defence Research Board and the Associate Deputy Minister; its purpose is to advise the Minister on administrative and other matters.
- (2) **Chiefs of Staff Committee.**—Composed of the Chairman of the Chiefs of Staff, the three Chiefs of Staff and the Chairman of the Defence Research Board. The Deputy Minister of National Defence attends regularly and the Secretary to the Cabinet and the Under Secretary of State for External Affairs attend when required. The purpose of the Committee is to maintain a continuous review of all operational problems; sub-committees consider various aspects of these problems and report to the parent committee.

* Prepared by the Office of the Deputy Minister, Department of National Defence, Ottawa.

- (3) **Personnel Members Committee.**—Composed of the Chief of Naval Personnel, the Adjutant-General, the Air Member for Personnel, the Assistant Deputy Minister (Administration and Personnel), the Assistant Deputy Minister (Finance) and a representative of the Chairman of the Defence Research Board. The purpose of the Committee is to examine personnel problems of the three Services with the general aim of achieving uniform personnel policies; sub-committees consider various aspects of personnel problems and report to the parent committee.
- (4) **Principal Supply Officers Committee.**—Composed of the Chief of Naval Technical Services, the Quartermaster-General, the Air Member for Technical Services, the Assistant Deputy Minister (Requirements) and a representative of the Chairman of the Defence Research Board. The purpose of the Committee is to consider logistical problems; sub-committees consider various aspects of these problems and report to the parent committee.

Defence Supply Committee.—An interdepartmental committee composed of the Deputy Ministers of National Defence and of Defence Production and the senior military and civilian supply officers of the two Departments has been established to review inter-departmental procurement and production problems and consider various policy aspects of the procurement of ammunition, armament, aircraft, etc. Eleven panels consider various aspects of these problems and report to the parent committee.

Canada-United States Committee on Joint Defence.—Composed of: for Canada, the Secretary of State for External Affairs, the Minister of National Defence and the Minister of Finance; for the United States, the Secretary of State, the Secretary of Defense and the Secretary of the Treasury; together with such appropriate Cabinet Members as either Government may designate from time to time as the need arises.

The function of this Committee is to consult periodically on any matters affecting the joint defence of Canada and the United States; to exchange information and views at the Ministerial level on problems that may arise, with a view to strengthening further the close and intimate co-operation between the two Governments on joint defence matters; and to report to the representative Governments on such discussions in order that consideration may be given to measures deemed appropriate and necessary to improve defence co-operation. The Committee meets, alternately in Ottawa and Washington, at least once a year as may be considered necessary by the two Governments. The Chairman is a Canadian member when the meetings are held in Canada and a United States member when the meetings are held in the United States.

Liaison Abroad.—The Chairman of the Chiefs of Staff, who is the Canadian military representative in the North Atlantic Treaty Organization, is responsible for co-ordinating all NATO military matters and acts as a military adviser to Canadian NATO delegations. For purposes of liaison and the furtherance of international co-operation in defence, Canada also maintains: (1) the Canadian Joint Staff (London) representing the three Services and the Defence Research Board in the United Kingdom, the Chairman of which is the principal military adviser to the Canadian High Commissioner in London, the principal military adviser to the Permanent Canadian Delegate to the NATO Council and the Canadian National Military Representative to SHAPE; (2) the Canadian Joint Staff (Washington) representing the three Services and the Defence Research Board in the United States, the Chairman of which is the principal military adviser to the Canadian Ambassador in Washington, the Canadian National Liaison Representative to SACLANF Headquarters and the Canadian member of the NATO Military Committee in Permanent Session; and (3) Service Attachés in various countries throughout the world. In addition, a number of defence matters of concern to both Canada and the United States are considered by the Permanent Joint Board on Defence.

Mutual Aid.—Canada's contributions to NATO are outlined on pp. 137-138.

Rates of Pay and Allowances.—The entire pay structure for comparable ranks in the different Services is on a uniform basis. Monthly rates for pay and allowances are given in Table 1.

1.—Monthly Rates of Pay and Allowances for the Canadian Armed Forces, Effective May 1, 1957

Royal Canadian Navy	Canadian Army	Royal Canadian Air Force	Basic Pay	Pro- gressive Pay			Group Pay for Tradesmen and Specialists				Subsistence Allowance		Ration Allowance	Mar- riage Allowance	Separated Family's Allowance (personnel not in married quarters) with Children	
				Years in Rank			Group				Personnel not in Receipt of Marriage Allowance	Personnel in Receipt of Marriage Allowance			In Receipt of Sub- sistence Allowance	Not in Receipt of Sub- sistence Allowance

¹ Depending on rank on promotion.

The allowances shown in Table 1 are explained briefly as follows.

Subsistence Allowance.—This allowance is granted whenever rations and quarters are not provided. A married man living with his family uses his subsistence allowance for their maintenance as well as his own.

Ration Allowance.—A ration allowance is granted when quarters are available but rations are not provided. It is not payable concurrently with subsistence allowance.

Marriage Allowance.—The amount of this allowance is \$30 a month for men and \$40 a month for officers, the latter subject to a reduction of \$10 a month where permanent married quarters are occupied or \$2.50 a month where temporary married quarters are occupied. All ranks may draw this allowance upon marriage provided the initial training period has been completed and the age of 21 years has been attained by men and 23 years by officers.

Separated Family's Allowance.—An officer or man in receipt of marriage allowance, while separated from his dependants for any of various reasons (*i.e.*, movement of dependants prohibited, illness of dependants, lack of suitable accommodation), on being moved other than temporarily may be entitled to separated family's allowance at a rate and for a period depending on circumstances (*i.e.*, rank, reason for separation, whether or not he has children, whether or not his family is accommodated in married quarters, whether or not he is provided with quarters and rations). The rates listed are the maximum.

In addition to the above, *Foreign Allowances* are granted to officers and men posted for duty to a country outside Canada to compensate for additional living expenses incurred; these vary with rank, appointment and location. *Northern Allowances* are granted to officers and men serving in Northern Canada at rates varying from \$31.67 to \$125 a month, depending upon circumstances. *Outfit Allowances and Clothing Credits* are as follows: Officers receive a single payment of \$450 on appointment and Warrant Officers Class I, \$270; men receive a free issue of clothing when they join and thereafter a monthly clothing credit or allowance of \$7, Navy Petty Officer 1st class and above \$8, and women \$8. An *Aircrew Allowance* of \$75 a month is paid to an officer or man undergoing flying training. For qualified aircrew this allowance may be increased to \$150, depending on rank, if filling an appointment requiring active and continuous flying duties and to \$100, depending on rank, for maintaining proficiency. *Submarine Allowance* is granted an officer or man undergoing submarine training or filling an appointment in a submarine; the allowance varies from \$65 to \$115 a month depending on rank. An officer or man actively engaged or undergoing training as a parachutist or on flying or submarine duties and not entitled to aircrew allowance or submarine allowance is paid a *Risk Allowance* at the rate of \$30 a month.

Subsection 1.—The Royal Canadian Navy

Role and Organization.—The primary role of the Royal Canadian Navy is anti-submarine warfare in all its aspects. Because of the prospect of long-range submarines capable of launching nuclear missiles hundreds of miles off-shore against coastal and inland targets, the RCN and the RCAF have placed primary emphasis on the development of forward operational systems and new techniques for locating and dealing with hostile submarines far out at sea.

The Royal Canadian Navy comes under the central authority of the Chief of the Naval Staff at Naval Headquarters in Ottawa. The Flag Officer, Atlantic Coast, at Halifax, N.S., and the Flag Officer, Pacific Coast, at Esquimalt, B.C., exercise operational and administrative command of ships and establishments within the Atlantic and Pacific Coast Commands. The Flag Officers in the Atlantic and Pacific Commands also hold the additional appointments of Maritime Commander Atlantic and Maritime Commander Pacific, respectively. As such, each is responsible for anti-submarine operations involving RCN and RCAF forces in his Command. The Naval Comptroller organization was established in 1956 to assist in the effective control of the use of manpower, material and

financial resources of the Navy. The recruiting and training of officers and men of the Royal Canadian Navy (Reserve) is conducted mainly through 21 Naval Divisions across Canada under the over-all command of the Commanding Officer, Naval Divisions, with headquarters at Hamilton, Ont. There are naval missions in London, Eng., and Washington, U.S.A., to maintain liaison with the Royal Navy and the United States Navy. As a result of Canada's NATO commitments (see pp. 136-138), officers of the Royal Canadian Navy serve on the staffs of: the Supreme Allied Commander, Atlantic, at Norfolk, Va., in the United States; the Commander-in-Chief, Eastern Atlantic Area, at Northwood in the United Kingdom; and the Commander-in-Chief, Western Atlantic Area, at Norfolk, Va. The Flag Officer, Atlantic Coast, holds the appointment of Commander, Canadian Atlantic Sub-Area.

The strength of the RCN at Mar. 31, 1959, was 20,478 officers and men in the Regular Force and 3,331 in the Reserve Force.

Operations at Sea, 1958-59.—At the end of 1958 the Royal Canadian Navy had 47 warships in commission, two Royal Navy submarines under its operational control and a further six warships under refit. This compared with 45 ships in commission and five in refit at the end of 1957. During 1958 the first two of the RCN's new anti-submarine destroyer escorts of the Restigouche class joined the fleet—HMCS *Restigouche*, the prototype, in June and HMCS *St. Croix* in October. Early in 1959 two others, HMCS *Gatineau* and HMCS *Kootenay*, were commissioned and three more were scheduled for service by the end of the year. This class of destroyer escort is developed from the St. Laurent class and incorporates advances in armament and submarine detection capabilities. HMCS *New Waterford*, the last of 21 anti-submarine frigates to be modernized, also joined the fleet in 1958.

Early in 1959 transfer of a number of destroyer escorts was effected between the Atlantic and Pacific Commands. The seven St. Laurent class ships—*Assiniboine*, *St. Laurent*, *Skeena*, *Fraser*, *Margaree*, *Ottawa* and *Saguenay*—now comprise the Second Canadian Escort Squadron based at Esquimalt, B.C. The four Restigouche class destroyer escorts in commission form the Fifth Canadian Escort Squadron based at Halifax, N.S., to be joined by the three new vessels of similar class later in the year.

To give further flexibility to the fleet, the mobile repair ship HMCS *Cape Scott* was commissioned at Halifax on Jan. 28, 1959. This ship is equipped with facilities to handle every type of repair work necessary for ships afloat, a decompression chamber for the divers who work from the ship, and a helicopter landing platform. A similar ship, HMCS *Cape Breton*, will join the fleet late in 1959. Both ships are designed to carry out non-major repair work for ships either at sea or at points remote from dockyards and shipyards.

During 1958 sea training activities ranged from single-ship work-ups to large-scale NATO exercises in which Canadian warships worked alongside those of France, Italy, the Netherlands, Portugal, the United Kingdom, the United States and Germany. Combined with this normal training were goodwill missions carried out by HMC ships in the course of cruises which took them to numerous ports on both coasts of Canada and the United States, to Japan, Hawaii, Hong Kong, South Vietnam, Okinawa, Fiji, Australia, New Zealand, Alaska, Central America, Mexico, the West Indies, France, Malta, Italy, the Azores, Gibraltar and the United Kingdom.

On the Great Lakes, a training squadron from the Atlantic Command provided sea training during the summer months for naval reservists from across Canada. More than 500 new-entry seamen of the RCN (Reserve) passed through the Great Lakes Training Centre at Hamilton, Ont., during the peak months of July and August.

Fourteen ships of the RCN, which had been transferred to Turkey under the program of Mutual Aid to member nations of NATO, sailed from Canada to their new home in May 1958. The ships included four Bay class minesweepers and ten Bangor class coastal escorts.

Early in the year, the RCN participated in a major exercise in anti-submarine warfare. *Operation Maple Royal* was a two-phase exercise in which ships and aircraft of the British Home Fleet combined with RCN ships and aircraft and RCAF aircraft in extensive manoeuvres in the Western Atlantic. Seventeen Canadian ships participated, made up of the aircraft carrier HMCS *Bonaventure* and units of the First, Third and Seventh Canadian Escort Squadrons and the First Canadian Minesweeping Squadron. Also participating were two Halifax-based Royal Navy submarines, four naval air squadrons, No. 404 Maritime Patrol Squadron, and RCAF and RAF *Shackleton* aircraft based temporarily at Greenwood, N.S. Later in the year, HMCS *Bonaventure* and the destroyer escorts *St. Laurent*, *Ottawa*, *Haida* and *Huron* participated in three major NATO exercises in Mediterranean and United Kingdom waters.

A new cadet-training squadron, the Fourth Canadian Escort Squadron, was formed on the Pacific Coast during 1958, to provide sea training for naval cadets from the Canadian Services Colleges, universities and HMCS *Venture*, the junior officer training establishment at Esquimalt, B.C. The Squadron took over duties formerly performed by the training cruiser HMCS *Ontario*, which was paid off on Oct. 15, 1958. The paying-off of the cruiser made available nearly 600 officers and men for anti-submarine ships of the fleet.

Training.—The major shore training establishments are HMCS *Stadacona* at Halifax, N.S.; HMCS *Naden* at Esquimalt, B.C.; HMCS *Cornwallis* near Digby, N.S.; and HMCS *Shearwater* near Dartmouth, N.S. Facilities at *Stadacona* and *Naden* include schools for general and specialized training, drafting depots, hospitals and accommodation facilities necessary for the maintenance of the ships based on each coast. New-entry or re-entry training, 15 weeks in duration, is conducted at the basic training establishment HMCS *Cornwallis*; during 1958, 2,662 men were enrolled. The new-entry training establishment HMCS *D'Iberville* at Quebec City gives all French-speaking personnel a basic knowledge of English and preliminary training in seamanship and professional naval subjects. After completing the course at *D'Iberville*, French-speaking new entries join classes at *Cornwallis*.

Trade and specialist training is conducted in various schools and training centres, including the naval supply school at HMCS *Hochelaga* in Montreal which was re-commissioned Oct. 1, 1955, and where 779 men completed training during 1958. Certain specialized training in new equipment is undertaken at the manufacturing centres by men who later become instructors.

A new Naval Technical School was opened at Esquimalt on Oct. 18, 1958, equipped to provide naval technical personnel with the best possible training from basic to advanced level. Engineering, air engineering, electrical, electronics, ordnance and shipwright courses are conducted in this new establishment. The ordnance, mechanical and electrical training establishments formerly in HMCS *Naden* and the training establishment for naval technical apprentices formerly conducted at Halifax in HMCS *Cape Breton* have been incorporated in the school.

Under the Regular Officer Training Plan, 15 graduate cadets were assigned to duty with the Navy during 1958 and another 19 went on to the final year at university in special courses. One graduate from the College Training Plan joined the fleet. At the end of the year there were 210 naval cadets in training under the Regular Officer Training Plan and 12 under the College Training Plan.

Under the *Venture* Plan, which was introduced in 1954 to train young men for seven-year, short-service appointments and which offers the opportunity of permanent commissions, 49 cadets were graduated in August 1958, promoted to midshipmen and posted for further training afloat or in shore establishments, 20 of them as naval aircrew by arrangement with the United States Navy. At the end of 1958 there were 134 cadets in training at HMCS *Venture* and at the end of March 1959 there were 41 midshipmen in training ashore or afloat.

The University Naval Training Division program, conducted to give instruction to university students, has as its object the provision of well-trained junior officers for the RCN and the RCN(R). The training period is three years and cadets are required to complete three winter-training periods, two summer periods and certain specified courses, after which suitable candidates receive promotion to Acting Sub-Lieutenant or Sub-Lieutenant, depending on academic status. During 1958, UNTD cadets were in attendance at 26 universities and colleges across Canada.

Royal Canadian Navy (Reserve).—Naval Divisions are established in the following centres:—

St. John's, Nfld., HMCS *Cabot*
 Charlottetown, P.E.I., HMCS *Queen Charlotte*
 Halifax, N.S., HMCS *Scotian*
 Saint John, N.B., HMCS *Brunswick*
 Quebec, Que., HMCS *Montcalm*
 Montreal, Que., HMCS *Donnacona*
 Toronto, Ont., HMCS *York*
 Ottawa, Ont., HMCS *Carleton*
 Kingston, Ont., HMCS *Cataraqui*
 Hamilton, Ont., HMCS *Star*
 Windsor, Ont., HMCS *Hunter*

London, Ont., HMCS *Prevost*
 Port Arthur, Ont., HMCS *Griffon*
 Winnipeg, Man., HMCS *Chippawa*
 Regina, Sask., HMCS *Queen*
 Saskatoon, Sask., HMCS *Unicorn*
 Calgary, Alta., HMCS *Tecumseh*
 Edmonton, Alta., HMCS *Nonsuch*
 Vancouver, B.C., HMCS *Discovery*
 Victoria, B.C., HMCS *Malahat*
 Prince Rupert, B.C., HMCS *Chatham*

Royal Canadian Navy (Reserve) Naval Divisions, commanded by Reserve officers, are responsible for specialized training in one or other of the various phases of naval activity, such as gunnery, torpedo and anti-submarine and seaward defence, in addition to training in engineering, supply, electronics, etc. Assistance in instruction is provided by RCN officers and men. The Great Lakes Training Centre at Hamilton conducts new-entry reserve training afloat in two ships of the Eleventh Canadian Escort Squadron, HMCS *Sault Ste. Marie* and HMCS *Portage*. A continuous aviation training program was implemented during 1958 in the five RCN (R) Squadrons: VC 920 (HMCS *York*, Toronto, Ont.); VC 921 (HMCS *Cataraqui*, Kingston, Ont.); VC 922 (HMCS *Malahat*, Victoria, B.C.); VC 923 (HMCS *Montcalm*, Quebec, Que.); and VC 924 (HMCS *Tecumseh*, Calgary, Alta.).

Royal Canadian Sea Cadets.—Royal Canadian Sea Cadets, sponsored by the Navy League of Canada and supervised by the RCN, comprised 154 authorized corps in 1958. These were divided into seven Sea Cadets areas, supervised by 16 naval officers, responsible to the Commanding Officer, Naval Divisions. Instruction is carried out by RCSC officers. During the summer of 1958, two RCSC training establishments—*Acadia* on the East Coast and *Quadra* on the West Coast—were activated, accommodating a total of 162 officers and 3,067 cadets for two-week training periods. In addition a total of 145 Sea Cadets underwent eight-week training courses at the two establishments. Sea training was provided for cadets throughout the year in various types of ships. The strength of the corps at the end of 1958 was 1,110 Sea Cadet officers and 9,809 Sea Cadets.

New Construction and Modernization.—At the end of 1958, one Repeat Restigouche class destroyer escort was under construction, together with five Restigouche class destroyer escorts. Two of the latter were in service early in 1959 and the remainder were scheduled for completion by the end of that year. One auxiliary craft and one diving tender were also under construction at the end of 1958.

In naval aviation, 43 *CS2F-1 Tracker* twin-engined anti-submarine aircraft, made in Canada, had been delivered to the RCN by the end of 1958; the contract is for 100. Late in the year production was changed to a modified version which is scheduled to go into service in the summer of 1959. The modifications were made to further improve the anti-submarine capabilities of the aircraft.

The *F2H3 Banshee* twin-jet fighter procurement program was completed in 1958, bringing to 39 the number purchased from the United States Navy. An important development during the year was the fitting of air-to-air *Sidewinder* missiles to naval

Banshee aircraft, the first guided missiles to be put into operational service by Canada's Armed Forces. During the year, RCN anti-submarine helicopters were fitted to carry homing torpedoes. The homing torpedo is also carried in destroyer escorts and *Tracker* aircraft.

Subsection 2.—The Canadian Army

Organization.—Army Headquarters at Ottawa is organized into three separate Branches. The General Staff Branch deals with all matters affecting the fighting efficiency of the Army, the Adjutant-General Branch deals with all problems affecting the soldier as an individual and the Quartermaster-General Branch is responsible for supply. The senior appointment at Army Headquarters is the Chief of the General Staff who, through the Heads of the three Branches, directs all activities of the Canadian Army. For command and control, Canada is divided into Commands and Areas each with its own headquarters divided into the same three branches as Army Headquarters. Locations of these headquarters are as follows:—

<u>Command</u>	<u>Headquarters</u>	<u>Area and Headquarters</u>
Eastern Command.....	Halifax, N.S.....	(1) New Brunswick Area, Fredericton, N.B. (2) Newfoundland Area, St. John's, Nfld.
Quebec Command.....	Montreal, Que.....	(3) Eastern Quebec Area, Quebec, Que.
Central Command.....	Oakville, Ont.....	(4) Eastern Ontario Area, Kingston, Ont. (5) Central Ontario Area, Oakville, Ont. (6) Western Ontario Area, London, Ont.
Prairie Command.....	Winnipeg, Man.....	(7) Saskatchewan Area, Regina, Sask.
Western Command.....	Edmonton, Alta.....	(8) British Columbia Area, Vancouver, B.C.

The Canadian Army comprises the Canadian Army (Regular) and the Reserves. The Canadian Army (Regular) consists of four Infantry Brigade Groups and static units and installations for command and control. One of the Brigade Groups is in Europe with the NATO Force and is under command of the Supreme Allied Commander in Europe. The Reserves include the Canadian Army (Militia), the Regular Reserve, the Supplementary Reserve, the Canadian Officers' Training Corps, the Cadet Services of Canada and the Reserve Militia. Additional to but not an integral part of the Canadian Army are the Services Colleges (*see* p. 1168), officially authorized cadet corps, rifle associations and clubs.

The strength of the Canadian Army (Regular), at Mar. 31, 1959, was 48,307 officers and men and the strength of the Canadian Army (Militia) was 40,971.

Operations in 1958.—In fulfilment of its military obligation under the North Atlantic Treaty, Canada has continued to provide ground forces for the defence of Western Europe. The 4th Canadian Infantry Brigade Group, which consists of the 1st Regiment RCHA, the Royal Canadian Dragoons, the 2nd Battalion, the Canadian Guards, the 3rd Battalion, the Royal 22nd Regiment and the 2nd Battalion, the Queen's Own Rifles of Canada, has been stationed in Germany since October 1957. The Headquarters of the Brigade Group is at Soest. Married quarters for officers and men number 1,600 and are located in the vicinity of Soest, Werl, Hemer and Iserlohn.

As a result of Canadian membership in the International Supervisory Commissions of Vietnam and Cambodia, the Canadian Army continued to provide 65 officers and men for truce supervisory duty in Indo-China. Following a political settlement and an election in Laos, the military component of the Canadian Delegation, Laos, was dissolved in May 1958.

In June 1958, at the request of the United Nations, Canada was among the first nations to send observers to Lebanon. This observer group, known as UNOGIL, began to arrive in Lebanon in mid-June. By September the total Canadian commitment was 71 officers and men. On Nov. 15, the United Nations decided that the observer group could be withdrawn from Lebanon and consequently all military personnel were returned to Canada by Jan. 1, 1959.

Since 1956, the Canadian Army has made a major contribution to the United Nations Emergency Forces in the Middle East. The strength of the Canadian contingent is approximately 900 officers and men. Its task is to patrol a sector of the Egypt-Israel Armistice Demarcation Line and to provide communications, repairs and maintenance, and catering services to the International Force. In other locations, such as Kashmir, Pakistan and Korea, Army officers are employed by the United Nations on various armistice commissions as observers in a supervisory capacity. At the end of 1958, 27 officers were employed on such duties.

Canada, as a member of the United Nations, may be called on to provide, at short notice, military forces for service under or in support of the United Nations. An infantry battalion has been specially trained and equipped to undertake operations of this nature. During 1958, this battalion took part, with the RCAF, in a successful exercise designed to practice its movement to any part of the world. Selected infantry and supporting units, with RCAF participation, carried out parachute and air-transported training exercises to maintain their capability of dealing effectively with possible small invasions of the Canadian Arctic by an aggressor.

Equipment.—The Canadian Army Equipment Development Program continues to concentrate on the fields which are particularly suited to Canadian capabilities and in which there are special Canadian needs. Emphasis has been given to the problems of living and operating in the North under the most adverse conditions. The development and evaluation of defence equipment for atomic, biological and chemical warfare continues in close co-operation with the RCN, RCAF and Defence Research Board. The standardization program in the United States, the United Kingdom and Canada and within NATO continues to promote the exchange of knowledge to the mutual advantage of the armies concerned. Additional agreements were reached affecting procedures and equipment. The Canadian Army has been completely equipped with the FN rifle. The FN (C2) has been introduced into the Canadian Army (Reserve) and will replace the LMG (Bren) in 1959. Both these weapons fire the NATO 7.62mm calibre round.

Training.—The policy of training is determined at Army Headquarters. General Officers Commanding Commands implement the training policies within their Commands, except for those conducted at Army and corps schools that are under the direct supervision of Army Headquarters. During 1958 the basic training of 5,641 recruits and the corps training of officers and men of the Canadian Army (Regular) was carried out at regimental depots, units and corps schools and 9,783 personnel attended courses at the schools of instruction. Promotion qualification examinations consisting of written and practical tests were held to qualify Regular and Militia officers for the ranks of Captain and Major; 47 candidates passed qualification examinations for selection to attend the Canadian Army Staff College and 19 passed the entrance examination for the Royal Military College of Science. A training program was conducted during the winter months for all Regular officers to further their professional knowledge. Militia Staff Course examinations were conducted for Militia officers to qualify Captains and Majors for

command and staff appointments. Qualifying courses for Junior NCO's were conducted under General Officers Commanding Commands. Senior NCO courses were conducted at corps schools in accordance with training standards.

French- and English-language training, which is available to all ranks of the Canadian Army, was conducted by Commands and AHQ. The Canadian Army Training School conducted six-month French-language courses for English-speaking officers and NCO instructors. A number of French-speaking potential NCO's have also received English-language training.

Officers from the RCN and RCAF as well as officers from the United States, the United Kingdom, Australia, Pakistan, India, Germany, Belgium, Turkey, Norway, France and Italy attended courses at Canadian Army schools of instruction.

Trade and specialty training is given at corps schools and units. Where feasible, the facilities of civilian schools are used to supplement training at Army establishments. Training is conducted in accordance with the appropriate training standard for each trade or specialty. When required by technical developments in the Army, trades are revised and new trades are introduced. Trades relating to aircraft maintenance and repair are being studied in keeping with the decision that the Army will use certain aircraft.

The apprentice training program inaugurated in January 1953 is designed to train selected young men as soldier tradesmen and to provide them with the requisite academic background to enable them to advance to senior non-commissioned ranks in the Army. A high entry standard has been set to ensure that the prospective soldier apprentice will be capable of absorbing trade and academic training and also of developing the leadership qualities essential in senior NCO's. During 1958 an additional 460 apprentices were enrolled and 40 civilian teachers were employed to provide academic instruction for about 800 apprentice soldiers. Academic credits are obtained from the educational authorities of the province where the training is conducted. Apprentices receive trades training as clerks, cooks, carpenters, electricians, wireless operators, radar operators, radio mechanics, storemen, gun mechanics, vehicle mechanics and armourers. A balanced training program is designed to stimulate the interest of the apprentice. Military, trade, academic and recreational training are integrated. Separate messing, canteen and sleeping arrangements are provided for apprentices.

The training of the Defence of Canada Force continued throughout 1958. Airborne continuation training was carried out by each unit in conjunction with unit exercises. Defence of Canada Force units carried out exercises during the winter under cold weather conditions. Parachute and air supply courses were conducted at the Canadian Joint Training Centre at Rivers, Man., and courses in Arctic training at Fort Churchill, Man. Collective training for units in Canada was conducted during the summer months at Camp Gagetown, Camp Petawawa and Camp Wainwright. All arms training comprised sub-unit and unit training and culminated in exercises at the Brigade Group level.

The Reserves.—Funds were provided to permit an average of 45 days training for all ranks of the Militia during 1958, of which seven days was for summer training by attachment to Regular Army units, camps or headquarters. During the summer 12,800 all ranks were attached for summer training. The aim of training is to prepare the Militia for its role in the national survival program.

The Regular Officer Training Plan (ROTP).—The Regular Officer Training Plan is in effect at the three Canadian Services Colleges and at all Canadian universities and affiliated colleges that have contingents of the COTC. The purpose of the Plan is to train selected students for commissions in the Canadian Army (Regular). Students enrol in the Canadian Army (Regular) with a special rate of pay; tuition and essential fees are paid and grants are given for books and instruments needed for study. In the period Jan. 1, 1957 to Dec. 31, 1958, 213 of these sponsored students graduated and were commissioned in the Canadian Army (Regular). Training consists of military studies, drill and physical training during the academic year; the summer term is devoted to practical training at military establishments.

The Canadian Officers' Training Corps (COTC).—In addition to the Regular Officer Training Plan, units of the Canadian Officers' Training Corps are maintained at Canadian universities to produce primarily, from among university undergraduates, officers for the reserve components of the Army. University graduates who have been members of the Canadian Officers' Training Corps are also eligible for commissions in the Canadian Army (Regular). Members of the COTC undertake the same training as members of the ROTP. In the period July 1952 to July 1957, 388 officers who had trained with the COTC were awarded commissions in the Canadian Army (Regular).

Army Cadets.—The number of Royal Canadian Army Cadets training during 1957-58 was 67,493, enrolled in 541 cadet corps. Training was conducted by 1,465 Cadet Services of Canada officers and 797 civilian instructors assisted by Canadian Army Regular and Militia personnel. During the summer of 1958, 5,266 cadets spent seven weeks at summer camps located at Aldershot, N.S., Farnham, Que., Camp Borden, Ont., Ipperwash, Ont., Dundurn, Sask., and Vernon, B.C. During these summer camps cadets were qualified as either Cadet Leaders, Cadet Leader Instructors, Driver Mechanical Transport Group 1, or Infantry Signaller, Group 1. In addition, 524 cadets of the minimum age of 14 years attended two-week summer camps at Aldershot, N.S., and Clear Lake, Man. During these camps cadets were qualified as Junior Leaders (Cadet). The National Cadet Camp operated annually at Banff, Alta., is a camp attended by First Class or Master Cadets who are selected from cadet corps across Canada; in 1958, 229 such cadets attended. A total of 1,055 Cadet Services of Canada officers and civilian instructors attended summer camps throughout Canada in 1958; of this number 497 were undergoing training courses and 558 were employed on instructional duties.

Subsection 3.—The Royal Canadian Air Force

Organization.—Air Force Headquarters at Ottawa conducts the planning and policy administration and training of the Regular and Reserve Forces of the RCAF. Organization is divided into four categories—resource controls, personnel, logistics, and plans and operations. On Mar. 31, 1959, the major formations and their headquarters location were as follows:—

<i>Formation</i>	<i>Headquarters</i>
Air Defence Command.....	St. Hubert, Que.
5 Air Division.....	Vancouver, B.C.
1 Air Division.....	Metz, France
Air Transport Command.....	Lachine, Que.
Air Materiel Command.....	Rockcliffe, Ont.
Maritime Air Command.....	Halifax, N.S.
Training Command.....	Trenton, Ont.
14 Training Group.....	Winnipeg, Man.

The organization included 29 flying squadrons of the RCAF Regular and 11 flying squadrons of the Reserve. The Reserve squadrons performed an emergency and rescue role. Nine of the Regular squadrons contributed to the air defence of the Canada-U.S. Region; 12 squadrons were assigned to the air defence of Western Europe; four squadrons were required for RCAF transport operations at home and abroad; three maritime squadrons operated in conjunction with other forces for the defence of Canada's East and West Coasts; and one reconnaissance squadron carried out aerial photography and reconnaissance in the Canadian North.

The strength of the Royal Canadian Air Force at Mar. 31, 1959, was 51,627 officers and men in the Regular Force and 4,114 in the Auxiliary Air Force.

Operations in 1958.—The RCAF continued to fill its established air defence commitments. Emphasis was placed on improving efficiency in integrated operations with USAF air defence forces and increasing the effectiveness of Canadian air defence squadrons. The Canadian air defence force remained at nine *CF100 Mk V* all-weather squadrons.

No. 1 Air Division in Europe, comprised of eight *F86*, four *CF100 Mk IVB* and one *AC&W* squadrons, continued to fill Canada's commitment to the NATO air defence fighter force.

Air Defence Command continued its planned build-up and had under operation three radar systems—the Distant Early Warning Line (DEW), the Mid-Canada Line (MCL), and the Pinetree Line—as an integral part of North American Air Defence Command (NORAD). The RCAF Ground Observer Corps, which acts as a supplement to the radar system, remained at a strength of approximately 54,000 civilian volunteers and 5,000 observation posts located throughout the country.

The program of re-equipping Maritime Air Command squadrons with improved aircraft and equipment continued throughout the year. On the East Coast, one squadron completed conversion to the *Argus*, the largest and most modern anti-submarine aircraft in operational use, and conversion of the second squadron was under way. On the West Coast, the last of the *Lancasters* was retired and the squadron re-equipped with *Neptune* aircraft. The aircrews of Maritime Air Command, in co-operation with the RCN, participated in both national and NATO exercises and increased emphasis was placed on regular daily patrols and surveillance over the waters on both coasts.

Air Transport Command continued to provide support to the Air Division and the Army Brigade in Europe using its *North Star* aircraft. *Fairchild C119* aircraft of this Command were engaged in cargo and personnel carrier operations in Canada and in para-troop training for the Canadian Army. Both *North Star* and *C119* aircraft were used for operations in support of the Arctic weather stations.

In 1958, ice reconnaissance in support of Department of Transport ships supplying DEW Line stations was undertaken by 408 Squadron of Air Transport Command. An ice reconnaissance detachment was established at Frobisher Bay and daily reconnaissance flights were carried out from July 15 to Nov. 1. In addition, 408 Squadron carried out routine reconnaissance missions of the Arctic Archipelago.

During the year, the RCAF continued to provide search and rescue services in Canadian areas of responsibility. Fifty-seven major search operations were conducted of which 37 were for civil aircraft and nine were for military aircraft. Marine craft and miscellaneous cases accounted for the remainder. There were 163 mercy flights conducted during the year. The total flying time for all search and rescue operations was 8,030 hours.

Training and Equipment.—During the year ended Mar. 31, 1959, NATO aircrew training in Canada continued to be active; by the end of 1958, 5,672 aircrew had been graduated under this plan since its inception in 1951. In addition, the RCAF was engaged in training aircrew for its own requirements. Basic trades courses for non-flying list officers produced 402 graduates and basic trades schools graduated 6,112 tradesmen during 1958-59.

Flight cadets entering the service received officer development training and primary flying training at Centralia, Ont. Basic flying training was conducted at flying training schools located at Moose Jaw, Sask., and Penhold, Alta. Advanced flying training on twin-engine aircraft was given at Saskatoon, Sask., and advanced flying training on jet aircraft was conducted at Portage la Prairie, Gimli, and MacDonald, Man. Flying instructor training was given at Trenton, Ont., and instrument rating courses were conducted at Saskatoon, Sask. Observers received their basic and advanced training at Winnipeg, Man.

Formal trade courses for newly commissioned non-flying list officers were conducted at RCAF schools in aeronautical engineering, armament, supply, telecommunications and flying control. Aircraft system trainers were used extensively to support technician and aircrew training programs at field technical training units and operational training units. Trade advancement training programs continued at all units, both regular and auxiliary, to help tradesmen advance into the qualified trade group levels. Semi-annual trade examinations were written under the direction of a Central Examination Board. Language training programs were conducted where necessary.

The aircraft procurement program during 1958 and 1959 is dealt with under Defence Production at pp. 1170-1175.

RCAF Reserve.—The active sub-components of the RCAF reserves are designated as the Auxiliary and the Primary Reserve. There are eleven Auxiliary flying squadrons which, during the year, were re-equipped as transport squadrons. These squadrons are maintained to train a reserve of transport aircrew and operate in an emergency transport role. In addition, the RCAF maintains 17 Auxiliary medical units, 17 aircraft control and warning squadrons and eight technical training units. The Primary Reserve is concerned mainly with the training of members of the University Reserve Training Plan (URTP), the Mobilization Assignment Training Plan (MATP) and the Reserve Tradesman Training Plan (RTTP).

During the year ended Mar. 31, 1959, officer development courses were conducted for some 300 first-year URTP university undergraduates at Reserve Officer School, St. Johns, Que. Following this initial training some non-flying list cadets continued with basic courses in aeronautical engineering, telecommunications, armament, supply and accounts while others in the medical, air services and personnel lists were employed at Regular Force units on contact training. Second and third year flight cadets continued with their formal or contact training.

Approximately 450 Reserve officers and senior NCO's received contact training for mobilization assignments during 1958. The Reserve Tradesman Training Plan was also continued and approximately 1,239 recruits, both high school and air cadets, completed training.

Royal Canadian Air Cadets.—Air cadet activities in Canada are sponsored and administered by the Air Cadet League of Canada. The League is a voluntary civilian organization formed in 1940 to provide preliminary aviation training for potential members of the Royal Canadian Air Force. The RCAF works jointly with the League and provides training personnel, syllabi and equipment.

During World War II the Royal Canadian Air Cadets reached a peak enrolment of 30,000. The authorized peacetime ceiling has recently been increased to 25,500 and the strength at Jan. 31, 1959, was approximately 24,840, enrolled in 324 squadrons across Canada. Air cadet training is carried out in more than 225 communities from Newfoundland to British Columbia. During the summer of 1958 camps were held at RCAF Stations at Greenwood, N.S., Clinton, Ont., and Sea Island, B.C., attended by about 6,000 cadets together with officers and instructors. A seven-week course for senior leaders and drill instructors was held for 200 cadets at RCAF Station, Camp Borden, Ont. A precision drill team of 40 cadets selected from the drill instructor course participated in an international drill display at Minneapolis, Minn.

The International Exchange Visits Program in 1958, sponsored jointly by the RCAF and the Air Cadet League, was very successful. Fifty-eight cadets were exchanged with the United Kingdom, the United States, Denmark, the Netherlands, Norway and Sweden.

About 250 senior air cadets receive flying training annually at flying clubs through scholarships awarded by the RCAF and additional scholarships are awarded by the Air Cadet League and other organizations. Under the Reserve Tradesman Training Plan, air cadets receive trades training in a nine-week summer course in addition to preparatory training with their respective squadrons during the school year.

Subsection 4.—The Defence Research Board

The Defence Research Board was established on Apr. 1, 1947, by an amendment to the National Defence Act. The Board consists of a full-time chairman and vice-chairman, six ex officio members and seven other appointed members. The ex officio members are the Chiefs of Staff of the three Armed Services, the Deputy Minister of National Defence, the President of the National Research Council and a representative of the Department

of Defence Production. The other members, appointed by the Governor in Council for three-year terms, are selected from universities and industry because of their scientific and technical backgrounds.

The organization consists of headquarters staff, an operational research group and ten field research stations, and liaison offices at London, Eng., and Washington, U.S.A. Advisory committees composed of leading Canadian scientists provide invaluable assistance to the Board by their consideration of a variety of problems.

The Government, realizing the vital need for continuity in research, planned the Defence Research Board as a fully integrated and permanent part of the defences of the country. To assist co-ordination at the highest level, the Chairman of the Board has the status of a Chief of Staff and is a member of the Chiefs of Staff Committee and of the Defence Council. Thus the Defence Research Board has been described as a fourth service. Its fundamental purpose is to correlate the special scientific requirements of the Armed Forces with the general research activities of the scientific community at large. The Board's policy is to select and concentrate its efforts upon defence problems of particular importance to Canada or for which Canada has unique resources or facilities. Existing research facilities such as the National Research Council are used wherever possible to meet the needs of the Armed Forces. The Board has built up new facilities only in those fields that have little or no civilian interest. From the policy of specialization it follows that close collaboration must be maintained with Canada's larger partners. Specialization is made possible only through the willingness of the United Kingdom and the United States to exchange the results of their broader programs for the less numerous but none the less valuable benefits of Canadian research.

The activities of the Defence Research Board are concerned primarily with naval, armament, telecommunications, Arctic, special weapons, operational, medical, aeronautical and materials research problems of specific interest to Canadian defence. To conduct this program of research, the Defence Research Board operates ten specialized research and development establishments and, in addition, organizes and supports research on problems of defence interest in universities and other agencies.

Research on naval problems is carried out at the Naval Research Establishment, Dartmouth, N.S., and at the Pacific Naval Laboratory, Esquimalt, B.C. Both stations are located adjacent to Royal Canadian Navy bases and consequently are able to work closely with the RCN, particularly on problems related to anti-submarine devices. Other major naval research investigations undertaken concern corrosion, marine paints, and underwater sound behaviour.

Research and development of weapons and armament is undertaken by the Defence Research Board in co-operation with the Armed Services at various establishments. The largest of these is the Canadian Armament Research and Development Establishment near Valcartier, Que. Its principal activities include research and development and testing of new and improved weapons.

Research on telecommunications is carried out in two laboratories at Ottawa—the Radio Physics Laboratory at Shirley Bay and the Electronics Laboratory on the Montreal Road. These two laboratories are known collectively as the Defence Research Telecommunications Establishment. This establishment is concerned with research in problems of communications and air navigation, with particular emphasis on basic research in the fields of radio propagation and electronic component development.

Research dealing with problems in Arctic operations is conducted at the Defence Research Northern Laboratory, Fort Churchill, Man. Recently the activities of DRNL have changed considerably, and during 1958 included support to the winding-up of the Canadian Geophysical Year (IGY) program and the associated United States IGY rocket program at Churchill.

Special weapons is the generic term used to cover research on the defensive aspects of chemical, biological and atomic weapons. This work is carried out at three Defence Research Board establishments—the Defence Research Chemical Laboratories at Ottawa,

Ont., the Suffield Experimental Station at Ralston, Alta., and the Defence Research Kingston Laboratory at Barriefield, Ont.

Military, psychological, clothing and food research is carried out intramurally at the Defence Research Medical Laboratories near Toronto and extramurally in Canadian universities by means of a grant-in-aid program. An important field of activity is aviation medicine but investigations include naval and army problems as well as studies on blood substitutes, infection and immunity, burns and wounds, the effects of noise on hearing, and other factors likely to affect a military man's efficiency and health.

Most of the basic aeronautical research program is also carried out extramurally in Canadian universities. The principal fields covered are aerodynamics, aircraft propulsion, and engineering materials. Applied research is carried out at the National Aeronautical Establishment at Ottawa and by contract with industry.

In all, the Board continues to support those fields of research which are of foremost interest to the Canadian Armed Services and the program is under continual review to ensure that cognizance is taken of all changes in emphasis in defence requirements. Close liaison is maintained between the Defence Research Board and the Department of Defence Production to ensure that research and development activities are closely integrated with production.

Section 2.—Services Colleges and Staff Training Colleges

Canadian Services Colleges.—The three Canadian Services Colleges are the Royal Military College of Canada founded at Kingston, Ont., in 1876, Royal Roads which was established in 1941 near Victoria, B.C., as a school for naval officers and Collège Militaire Royal de Saint-Jean established at St. Johns, Que., primarily to meet the needs of French-speaking cadets. The Royal Military College and Royal Roads were constituted as the Canadian Services Colleges in 1948, and Collège Militaire Royal de Saint-Jean was opened in 1952. In 1959 the Legislature of the Province of Ontario granted the Royal Military College a charter empowering it to grant degrees.

The purpose of the instruction and training at the Services Colleges is to impart the knowledge, to teach the skills and to develop the qualities of character and leadership essential to officers of all three Armed Services. The courses of instruction provide a sound and balanced liberal scientific and military education leading to degrees in Arts and Sciences which are granted by the Royal Military College. The organization and training give cadets the opportunity to command and to exercise judgment.

For cadets entering the Royal Military College and Royal Roads the course is of four years duration. As the third and fourth years of the college course are given only at the Royal Military College, cadets entering Royal Roads must proceed to that College for the final two years of the general or engineering courses. For cadets entering Collège Militaire Royal, which gives a preparatory year, the course is of five years duration. Cadets take the preparatory, first and second years at that institution and the final two years at the Royal Military College.

The College year is eleven months, divided into three terms: autumn, winter and summer. The months September to April are devoted to academic training supplemented by such military studies as drill and physical training. The summer term, May to mid-August, is spent in practical training at an establishment of the Service in which the cadet is enrolled. Academic requirements for admission to the first year at the Royal Military College and Royal Roads is senior matriculation (or its equivalent) in the following subjects: English, physics, mathematics (algebra, geometry and trigonometry), chemistry and either history or a language, preferably French. French-speaking candidates having a B.A. degree from a classical college may be accepted directly into the first year at Collège Militaire Royal. For admission to the preparatory year at that institution the academic requirement is junior matriculation (or its equivalent) in English, French, algebra, geometry, physics and chemistry, although consideration is given candidates who do not possess the standing in French. Candidates from the classical colleges require at least sixth-year standing.

To be accepted a candidate must be single, a Canadian citizen or British subject normally resident in Canada and physically fit in accordance with the medical standards of the Service in which he enrolls. The age limits for admission to the first year are between 16 and 21 years as of Jan. 1 of the year of entry; for admission to the preparatory year a cadet must have reached his 16th but not his 20th birthday on Jan. 1 of the year of entry. Personal interview and medical examinations of candidates is carried out by Service Boards located at various centres across Canada. Senior officers representing the Services and a faculty member from the Services Colleges sit on interview boards. The interview boards base their recommendations on the physical and personal qualifications of the candidates, with responsibility for final selection resting with a board appointed by the Minister of National Defence.

Since September 1954 virtually all cadets entering the Services Colleges have been required to enrol under the Regular Officer Training Plan. Under this Plan applicants accepted for entry enrol, according to their choice, as naval cadets in the Royal Canadian Navy, as officer cadets in the Canadian Army or as flight cadets in the Royal Canadian Air Force. All costs of tuition, board, lodging, uniforms, books, instruments and other essential fees are borne by the Department of National Defence, and cadets are paid at the rate of \$63 a month. On successfully completing their academic and military training, cadets are granted permanent commissions in the regular force but may, if they so wish, apply for release after three years of service following completion of academic training.

The only cadets now accepted at the Services Colleges in a reserve capacity are those who qualify for Dominion Cadetships, which are awarded by the Government in recognition of a candidate's parent having been killed, or having died or been severely incapacitated in the service of one of Canada's Armed Forces. A maximum of 15 Cadetships may be awarded in any one year, five in each Service. Each is valued at \$580, which covers first-year fees.

During the 1958-59 academic year, 932 cadets were in attendance at the Services Colleges; 426 of them at Royal Military College, 142 at Royal Roads, 364 at Collège Militaire Royal de Saint-Jean. Of the total, 166 were enrolled in the Navy, 362 in the Army and 404 in the Air Force.

Staff Training Colleges.—The Canadian Army Staff College at Kingston, Ont., trains officers for staff appointments in peace and war. The course is 21 months in duration with a student intake every second year. Though most of the student body is composed of Canadian Army officers, officers from the other two Services and from the armies of other Commonwealth and NATO countries also attend. Canadian Army officers must pass a searching entrance examination before being considered eligible for staff training. The system of instruction is based upon the study of précis and other references, demonstrations and lectures, indoor and outdoor exercises. Most of the work is carried on in syndicates, each under a member of the directing staff. Attention is paid to both individual and team work. Aside from purely military subjects such as the study of modern tactics, the curriculum includes national survival, research and development, world affairs and lectures by prominent guest speakers.

The National Defence College at Kingston, Ont., opened on Jan. 5, 1948, is a senior defence college providing an 11-month course of study covering the economic, political and military aspects of the defence of Canada. Senior officers and civil servants from the Armed Forces and government departments attend as well as a few representatives from industry. An extensive lecture course is provided, with lecturers chosen from leaders in various fields in Canada, the United States, the United Kingdom and other countries. In addition, educational tours and visits to certain parts of Canada, the United States, Europe and the Middle East are made to give students more knowledge of conditions and influences in their own and other countries. The twelfth course, from September 1958 to July 1959 was attended by 30 students, three from the Royal Canadian Navy, four each from the Canadian Army and Royal Canadian Air Force, one from the Defence Research Board, two from the Department of External Affairs, one each from the Department of

Defence Production, the Department of National Revenue, the Department of Finance, the Department of Trade and Commerce, and the Department of Transport, and two students from the Royal Canadian Mounted Police. Representation on the course from outside Canada included one member each from the Royal Navy, the British Army, the Royal Air Force, the Foreign Office of the United Kingdom, the Commonwealth Relations Office, the United States Navy, the United States Army, the United States Air Force and the State Department of the United States.

The Royal Canadian Air Force Staff College at Armour Heights in Toronto, Ont., is a permanent establishment preparing officers for staff appointments in the Air Force. The course affords advanced Service education for officers normally of Wing Commander and Squadron Leader ranks, fitting them for appointments appropriate to their present ranks and preparing them to assume higher appointments. The Directing Staff selected from the Royal Canadian Air Force is augmented by an exchange officer from each of the Royal Canadian Navy, the Canadian Army, and the Royal Air Force. The student body, in addition to Royal Canadian Air Force officers, has eight representatives from the Royal Canadian Navy, and one or two from each of the Canadian Army, the Royal Air Force and the United States Air Force. The objective of the course is to assist the student to think logically and express his ideas with precision both orally and in writing, to know his Service and understand the employment of air forces, to keep abreast of scientific and technical developments that may affect the employment of air forces and to gain a perspective of national and international problems. Lecturers are drawn, when desirable, from industry, the Armed Forces, the diplomatic corps and universities. Instructional visits are made to commercial and military establishments at home and abroad.

PART II.—DEFENCE PRODUCTION*

Under the provisions of the Defence Production Act (R.S.C. 1952, c. 62, as amended), the Department of Defence Production has exclusive authority to procure the goods and services required by the Department of National Defence and the responsibility to ensure that the necessary productive capacity and materials are available to support the defence production program. The Department also buys material for the Civil Defence program and serves as procurement agent for the Canadian Commercial Corporation, a Crown company primarily responsible for the purchase in Canada of defence goods required by other governments and of supplies needed to meet Canadian commitments under the Colombo Plan and other international agreements. Military construction is the prime responsibility of Defence Construction (1951) Limited, a Crown company reporting to Parliament through the Minister of Defence Production.

During 1958 the Department of Defence Production and Defence Construction (1951) Limited placed defence contracts on behalf of the Department of National Defence having a total net value of \$730,652,000, this representing an increase of 20.6 p.c. over the preceding year. (The net value of contracts placed includes the value of new contracts issued as well as the value of amendments that increased or decreased the commitments of existing contracts.) Although most of the major defence production programs registered increases in the net value of contracts issued during the year, a notable exception was the significant decline in the electronics and communication equipment program, resulting primarily from the termination of the integrated electronic system for the *CF-105 Arrow* aircraft.

Contracts and amendments issued in connection with the aircraft program, the largest area of defence procurement, amounted to \$300,185,000, an increase of 55 p.c. over 1957. This program accounted for 41 p.c. of the total net value of contracts placed in 1958, as compared with 32 p.c. in the previous year. The major commitments were for the supersonic *CF-105 Arrow* aircraft and its *PS-13 Iroquois* jet engine, the *CS2F Tracker* carrier-based aircraft, the *CP-107 Argus* maritime reconnaissance aircraft and the *CC-106* long-range transport, the *T-33 Silver Star* jet trainer, the new *CC-109 Cosmopolitan* medium-

* Prepared by the Economics and Statistics Branch, Department of Defence Production, Ottawa.

range transport, and the *Sparrow II* guided missile, which was subsequently cancelled. A large volume of contracts was placed for the repair and overhaul of airframes, engines and components during the year.

The electronics and communication equipment program was responsible for a net value of \$73,409,000 in contracts placed. The largest commitments involved the integrated electronic system (*Astra*) for the *CF-105*, but this project was also cancelled before the end of the year. Other major items of this program included certain types of radar sets and radar conversion sets, sonobuoy transmitters, maintenance and support for radar lines, and the engineering, supply, installation and temporary maintenance of the *ADCOM II* communication system.

Increased commitments on a number of destroyer escorts accounted for a large portion of the \$77,140,000 net contract value of the ships program. A contract was issued for construction of the lead ship of the Repeat Restigouche class of destroyer escorts. Many of the long-lead items for this group of escorts were ordered, such as turbo-driven auxiliaries, diesel generating sets and marine turbine reduction gearing.

Other items involving major commitments were 7.62mm (FN) rifles and 20 pdr. and 7.62mm ball cartridges. Aviation gasoline and turbo-jet fuel again accounted for a large part of the value of procurement contracts. Fuel procurements as a whole declined slightly in value. Defence construction contracts were up 11 p.c. over 1957 to \$66,956,000.

The value of expenditures on defence procurement and construction amounted to \$757,727,000 in 1958, almost 13 p.c. lower than in 1957. All major programs registered declines except weapons, and electronic and communications equipment, which increased moderately. The largest expenditure decreases occurred in the construction and ships programs, being 54 p.c. and 40 p.c., respectively. The aircraft program accounted for 45 p.c. of all defence procurement and construction expenditures in 1958, electronics and communication equipment for 13.1 p.c., ships for 6.6 p.c., construction for 6.4 p.c., and fuels and lubricants for 6.1 p.c.

Of the total net value of contracts issued during 1958, 97.3 p.c. was placed in Canada as compared with 91.0 p.c. in 1957; the increase was largely attributed to reductions in the value of some older contracts for government-furnished aircraft equipment purchased in the United States and to the termination of the *Astra* and *Sparrow* programs. The proportion of expenditures paid to defence contractors in Canada was 92.3 p.c. of total payments on defence procurement and construction, approximately the same as in the preceding year.

1.—Net Value of Total Canadian Government Defence Contracts Placed, by Program, 1957 and 1958

NOTE.—Net value includes the value of all new contracts awarded together with the value of amendments issued which increased or decreased the commitments of existing contracts.

Program	1957	1958	Program	1957	1958
	\$'000	\$'000		\$'000	\$'000

Aircraft.—In 1958 two Canadian designed and produced aircraft successfully completed their maiden flights—the *CF-105 Arrow* aircraft,* a supersonic all-weather jet interceptor, and the *DHC-4 Caribou*, a twin-engined troop transport and cargo carrier. Aircraft production declined as programs that had been in progress for several years were completed. The *F-86 Sabre* production line closed down in October following completion of an order for the West German Air Force, and the last *CF-100 Canuck* was completed in December. Production of the *T-33 Silver Star* jet trainers continued at a low rate, the program nearing completion at the end of 1958. *Otter* and *Beaver* general-purpose aircraft continued to be produced at the same rate as in 1957; the majority of these aircraft were purchased by the United States Government. Steady rates of production were also maintained for the maritime reconnaissance *CP-107 Argus* aircraft and the carrier-based anti-submarine *CS2F Tracker*. Manufacturing started on two new aircraft types: the *CC-106*, which is a long-range transport version of the *CP-107 Argus*, and the *CC-109 Cosmopolitan*, which is a medium-range transport. Both aircraft are powered by British turbo-prop engines.

Deliveries of the *Orenda* jet engine, which powers *CF-100* and *Sabre* aircraft, were completed in July. No further *Orenda* engines were purchased by the Department although contracts continued to be placed for spare parts, modification kits, publications and field services. Development, tooling and prototype production of the more advanced *PS-13 Iroquois* jet engine for the *CF-105* aircraft* proceeded satisfactorily. Production of *R-1820-82* piston engines and Hamilton Standard propellers for the *CS2F Tracker* aircraft continued during the year. The rate of production of these items was reduced as a result of a re-assessment by the Navy of its spare engine requirements and a consequent reduction in the number of engines ordered. The United States Government continued to buy a large quantity of *R-1340* piston engine spares from a Canadian source.

Canadian production of flight instruments, gyro compasses, pressure indicators and transmitters was almost completed in 1958. Production of the navigation and tactical control (ANTAC) system developed satisfactorily after difficulty with some of the components. The position and homing indicator reached the final development stage and was expected to receive flight trials early in 1959. One of the major developments in the instrument field was that of a low-drift gyro, of which the latest design was approved. Additional quantities of *R-Theta* computers were ordered for the Royal Canadian Air Force.

The repair, overhaul and maintenance of aircraft, engines and associated equipment continued on a fairly large scale, although the volume of work declined from the preceding year.

* Production of the *CF-105 Arrow* aircraft was discontinued as a result of a Government decision announced Feb. 20, 1959.

Pre-production engineering, tooling and qualification testing of the *Sparrow II* missile, which was initiated in 1957 to enable the production of this missile for the *Arrow* aircraft, continued during the first nine months of the year. However, all contracts related to this program were terminated on Sept. 23, 1958, following the Government's decision to cancel the requirement. A number of engineering study contracts were awarded to provide useful work for a nucleus of the engineers who had been employed on the *Sparrow* projects until new programs could be introduced.

Electronics.—In the field of ground electronics, the major item during 1958 was the initiation of the Pinetree radar line improvement program in both the Royal Canadian Air Force and the United States Air Force sectors. This consisted of tooling and pre-production engineering work on the new search and height-finding radars to be installed at existing Pinetree sites. A contract was placed for a new air defence communications system in eastern Ontario and southern Quebec. Work on this involved engineering and manufacturing of necessary equipment and planning for the later introduction of semi-automation into the air defence electronic ground environment.

Ground maintenance and airborne repair and overhaul contracts, together with orders for the necessary spares support, constituted a major part of the contracting activity in the electronics program. During the year, contracts were placed for the complete operational maintenance of the Mid-Canada early warning radar line, for over-all maintenance of the Pinetree line, and for a large volume of spares and repair and overhaul work.

Production continued on the provision of ultra high frequency (UHF) equipment, which included the introduction of one-kilowatt amplifiers at selected Royal Canadian Air Force sites. In the field of electronic equipment for military vehicles, arrangements were made for the acquisition of data necessary for the manufacture in Canada of a new transistorized multi-channel radio communication set. The requirement for ships was primarily in the field of anti-submarine warfare equipment and was made up of a wide variety of items rather than any special major program. The largest single item was the continued production of sonobuoys.

Airborne electronic equipment continued its rapid growth in capabilities and complexities. A significant occurrence in the airborne field was the termination of the integrated electronic system (*Astra*) for the *Arrow* aircraft and the *Sparrow II* missile. To assist in sustaining the fire control and missile engineering complex in Canada, engineers were engaged in a number of study projects for the Department of National Defence. Contracts were also placed for the production in Canada of flight simulators and general purpose instruments and procedure trainers. Programs were introduced for ultra high frequency communication and selective identification equipment in all aircraft.

Shipbuilding.—The first two ships of the second group of seven destroyer escorts known as the Restigouche class were commissioned in 1958, the other five being scheduled for completion in 1959 (see p. 1158). A third group of destroyer escorts, a repeat of the Restigouche class, was approved. Allocation to shipyards of the six ships of this group was authorized, and construction of the lead ship started in 1958. Contracts were also placed for machinery and other key items of supply for this program.

The last vessel in the frigate conversion program and two auxiliary vessels (work boats) were completed early in 1958. Sixty-eight small boats were under construction during the year, varying in size from 27-foot motor sea boats to 14-foot dinghies; 50 of these small craft were completed. Authority was received and procurement negotiations begun for the construction of an acoustic calibration barge for the Defence Research Board. A substantial number of Canadian-manufactured torpedoes were delivered during the year.

Weapons and Ammunition.—Production of the second order of 105mm howitzers for the Canadian Army was virtually completed in 1958 and manufacture of a third order was initiated. Production continued on long-term spares and fire control instruments for Army howitzers. Manufacture of the 7.62mm C-1 (FN) rifle was maintained and

first deliveries of the heavy-barreled automatic version were made. Production of snipers' telescopes for use with the new rifle was begun. Tool-proving and other pre-production processes were carried out in preparation for production of the 9mm sub-machine gun. Some 105mm recoilless rifles were procured from United States stocks for the Canadian Army. Deliveries were continued from the United Kingdom of 3"/70 cal. twin naval guns and mounts for installation in the later destroyer escorts. The first phase of a project to provide weather-shields for naval guns was also completed during the year. Heavy anti-submarine mortars continued to be produced.

Production of ammunition and explosives declined in 1958 from the preceding year, with the completion of such production items as high explosive and practice anti-submarine projectiles, 3"/70 cal. practice and dummy ammunition, 3"/50 cal. anti-aircraft ammunition, "T" cutters and various types of small arms ammunition for the Royal Canadian Navy; 105mm and 90mm artillery ammunition of various functional types, 60mm white phosphorus mortar ammunition, 2" mortar illuminating and red flare bombs, anti-tank training mines, and 3.2", 100mm and 3.5" infantry rockets for the Canadian Army; and 3 lb. signal and practice bombs, an explosive link assembly and various pyrotechnics for the Royal Canadian Air Force. The manufacture of artillery and mortar ammunition, infantry and air rockets, mines, small arms ammunition, demolition stores and pyrotechnics continued throughout the year. The main items of production included practice depth charges, 4" and 3"/70 cal. ammunition, 81mm white phosphorous and 60mm illuminating ammunition, 105mm, 90mm and 20 pdr. rounds of several kinds, 7.62mm ammunition, marine markers and air-to-air rockets. Production commenced in 1958 on a 2.75" rocket propellant, under-water fuzes, a high explosive filling for torpedo warheads and a 60mm illuminating round. In addition, stocks of ammunition received from depots were repaired and modified.

A quantity of *Sidewinder* guided missiles, too few for economical manufacture in Canada, was purchased in the United States for the Royal Canadian Navy.

Construction.—Construction activity for the Canadian Armed Forces, as measured in terms of payments to contractors, declined substantially in 1958 although the net value of contracts placed increased. The largest contract awarded by Defence Construction (1951) Limited was for the construction of a tri-Service hospital in Ottawa. Construction work was started on a program of additions and improvements to Pinetree radar stations. In Europe, construction work continued on additional facilities for the Canadian Air Division at Metz and for two Fighter Wings stationed at Marville and Gros Tenquin in France. Two of the largest projects undertaken for the Army were the paving of 50 miles of the Northwest Highway System and the construction of the new Peace River bridge. Other large projects included work at Sarcie Camp, Alta., at Barriefield, Ont., and at the Royal Military College, Kingston, Ont. The major Navy projects were at Esquimalt, B.C., and at Cornwallis, N.S.

General Purchasing.—The procurement of supplies and services not normally requiring special production facilities declined slightly in 1958 to \$177,000,000 from \$184,000,000 in 1957.

Purchases by the headquarters organization included such items as mechanical transport, road maintenance equipment and aircraft ground support equipment, together with their necessary maintenance spares and servicing; petroleum products and hard fuels; canned foods; furniture and furnishings; medical and dental stores, building supplies and hardware; all types of barrack and naval stores; electrical equipment and cable; clothing, footwear and leather goods. Services covered certain research and development projects, aerial surveys, engineering, and food catering. Major contracts placed during the year covered an electronic control aerial survey in the Baker Lake area; the rental of helicopters and fixed-wing aircraft to support ground survey teams of the Department of National Defence operating in the district of Franklin, N.W.T.; and meteorological, geophysical and glaciological studies in connection with the International Geophysical Year expedition in the Northwest Territories. Other contracts covered the purchase of

cobalt for biological experiments by the Defence Research Board; a stratosphere chamber and control unit to test airborne equipment; and albumin (blood) serum, drugs and medical supplies for the civil defence program. Development work was involved in the prototyping of the *Rat*, a vehicle primarily designed for cross-country travel on snow, and of the *Bobcat*, a multi-purpose light-tracked carrier.

District Purchasing Offices located in fourteen cities across Canada continued to purchase fresh foods and other supplies of a local or urgent nature and to arrange for services required by the defence establishments located in their vicinity. The facilities of several of the District Offices were utilized effectively to arrange winter employment on certain construction projects.

Production Sharing.—Production sharing is the integration of the defence production capabilities of Canada and the United States to bring about the most economical and efficient development and manufacture of military weapons for the defence of North America. It is a natural extension of the integration of the defence forces of the two countries under the North American Air Defence (NORAD) agreement.

The present program of co-operation arises out of two agreements between Canada and the United States: the Hyde Park Agreement of 1941 and the Statement of Principles for Economic Co-operation of 1950. In the autumn of 1958 a joint committee approved a set of immediate and long-term objectives of Canadian-United States production sharing. The immediate objective is to increase the participation of Canadian industry in the production and support of North American defence weapons and equipments. The continuing long-term objective is to co-ordinate the defence requirements, development, production and procurement of the two countries in order to achieve the best use of their respective production resources for their combined defence, in line with the concept of interdependence and the integration of military arrangements.

Procedures were established with the United States Government to carry out the program. Under the general aegis of the Canada-United States Ministerial Committee on Joint Defence, these involve a Senior Policy Committee comprised of senior officials of the Canadian Departments of Defence Production, National Defence, External Affairs and Finance, and the United States Department of Defense, a Steering Group to handle the co-ordination of all activities, and a number of Working Groups consisting of technical personnel who work out the detailed arrangements for production sharing of specific projects of mutual interest. Notable among these are the *Bomarc* missile, *SAGE* communication and radar programs which are common to the defence requirements of both countries.

Efforts to secure more equal opportunity for Canadian industry with United States industry in seeking United States prime contracts have been of greatest importance. This activity has also been extended to the creating of greater opportunities for major sub-contracts in Canada from United States prime contractors, notably in the important new fields of missiles and electronics. The Canadian defence industry is being encouraged to be more aggressive in seeking United States defence prime contracts and in familiarizing United States Government defence agencies and prime contractors with their capabilities in research, development and production of defence equipment.

PART III.—CIVIL DEFENCE

On Mar. 23, 1959, the Prime Minister, the Rt. Hon. John G. Diefenbaker, stated in the House of Commons that the Government had reviewed the arrangement of responsibility for civil defence tasks and that the Army would undertake primary and direct responsibility for the warning of attack, the location and monitoring of explosions and radioactive fallout, the assessment of damaged areas, decontamination and clearing of such areas, and rescue of the injured. The health and welfare aspects of civil defence are to remain the responsibility of the Department of National Health and Welfare but with increased financial and technical assistance to provincial authorities.

The Federal Government also offered increased support for special expenditures incurred by provincial and local authorities in making preparation for wartime traffic control and the preservation of law and order, this to be administered by the RCMP, which will also provide whatever technical and general advice may be necessary.

The Emergency Measures Organization, attached to the Privy Council Office, will co-ordinate the work of other agencies in the field of civil defence measures and planning as it does in respect of other civilian measures to prepare for war. Federal responsibilities not allocated to other departments or services will be assumed by this organization. Liaison with provincial governments on particular functions will be the responsibility of those dealing with such functions, but EMO will be charged with general responsibility for contact with the provincial authorities.

Historically, civil defence began in Canada in 1948 when the Minister of National Defence appointed a Co-ordinator for Civil Defence. In 1951 the administration of Civil Defence was transferred to the Department of National Health and Welfare with the Minister being charged with the responsibility of federal policy matters. As of the first of September 1959, the Emergency Measures Organization of the Privy Council Office will be the co-ordinating body for the new survival planning program in Canada with the Departments of National Defence (Army), Health and Welfare and other appointed government agencies carrying out their respective roles.

Canadian civil defence is organized at all levels of government—federal, provincial and municipal—each with its own sphere of responsibility. The provinces are self-contained units and are subdivided into zones for the purpose of providing mutual support to any disaster area. Because of geographical location in relation to probable target centres, certain areas have been designated as mutual aid or reception areas. Administrative and organizational responsibilities for each are: federal—planning, policy and financial assistance; provincial—organization and implementation; municipal—execution of plans and policy.

The Federal Civil Defence Headquarters located in Ottawa has comprised the Civil Defence Co-ordinator and staff, including the following services: Planning and Operations, Training and Education, Health, Welfare, Information, Administration and Communications. Under the new survival planning program these responsibilities have been allocated to various government departments as mentioned above. Advisory committees included the Federal Civil Defence Planning and Policy Committee, an Interdepartmental Committee and a Federal-Provincial Advisory Committee composed of the federal and provincial Ministers responsible for Civil Defence, plus numerous government agencies which were available to the Federal Co-ordinator for consultation purposes.

In liaison with the RCAF, a national attack warning system had been established under civil defence auspices with direct landline communication between federal headquarters in Ottawa and all provincial and target city headquarters. High-powered sirens are supplied by the Federal Government and installed and tested in vulnerable target areas across Canada. An extensive health supplies stockpiling program is continuing with the co-operation of the Departments of National Defence and Veterans Affairs.

Civil defence training courses, begun in 1951, have been continually expanded. More than 12,000 persons from across Canada have attended courses at the Canadian Civil Defence College at Arnprior, Ont., since its establishment in 1954. Thirteen basic courses are available dealing with such subjects as: health, welfare, communications, transportation, staff duties, casualty simulation, rescue and radiation detection. In addition, special forums have been held for groups representing the press, clergy, mayors, police and fire departments and national and industrial organizations. Training is also conducted under provincial auspices with British Columbia, Alberta, Saskatchewan and New Brunswick operating civil defence schools. On Mar. 31, 1959, the total enrolment of civil defence volunteers was 279,320.

Under the Financial Assistance Program of the Federal Government each province is provided with a money quota based on population and vulnerability. Prior to the March announcement of the Prime Minister, 50 p.c. of the cost of an approved project was

contributed by the Federal Government and the remainder shared by the municipality and the province; henceforth the Federal Government's share of an approved project will be 75 p.c. A minimum of 50 p.c. was contributed direct to a municipality for projects in which the provincial government did not share the cost. Training aids, fire and rescue equipment, and educational material were supplied by Federal Headquarters to further provincial and municipal programs.

A fire-hose coupling standardization program, to which the Federal Government contributed one-third of the cost, has been completed in British Columbia, Alberta and Ontario. Payments for workmen's compensation for civil defence workers are shared by agreement on an equal basis by the Federal Government and the majority of the provinces.

Many technical and training manuals, booklets and brochures were produced for Federal Civil Defence Headquarters by the Information Services Division of the Department of National Health and Welfare. In addition, pamphlets, folders, training aids, films, slides, newsclips and radio, newspaper and television material were produced and distributed as part of a continuing public information program.

Civil defence development and problems are constantly under discussion and study with the United States, the United Kingdom and other NATO countries. As the result of an agreement made between Canada and the United States in 1951, a United States-Canada Civil Defence Committee meets at regular intervals to further the bond of mutual assistance in the event of enemy attack.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

PART I.—SOURCES OF OFFICIAL INFORMATION

Section 1.—Federal Government Information Services

The chief source of statistical information on all phases of the economy of Canada is the Dominion Bureau of Statistics where the ten-year and five-year censuses of Canada are planned and statistical information of all kinds—federal and provincial—is centralized. Information that is not mainly statistical may be secured from the individual Department concerned with the particular subject as indicated in the Directory at pp. 1183-1213. Certain government bodies and national agencies, because of the nature of their work and the appeal it has to broad sections of the population, are organized primarily as information or publicity agencies. Among these are: the Information Division, Department of External Affairs, which deals with questions about external affairs originating in Canada and with general requests originating abroad for information on Canada and Canadian affairs; the Trade Publicity Branch, Department of Trade and Commerce; the Information Services Division, Department of National Health and Welfare; the Canadian Broadcasting Corporation; and the National Film Board. (*See Index.*) The Departments of Agriculture, Northern Affairs and National Resources, and Mines and Technical Surveys, and such agencies as the National Gallery of Canada, the National Museum of Canada, the National Library, and the National Research Council, while not thus classed, are interested in the dissemination of information to a greater extent than most of the remaining government departments, though several of the latter have publicity branches or public relations divisions.

Government departments, with few exceptions, issue their own lists of reports and publications. Departments are required by statute to publish annual reports, which are tabled each year in the House of Commons by their respective Ministers. However, for the purpose of this Section, only the services of the six information agencies mentioned above are described.

Section 2 has been prepared for the purpose of presenting to the reader a directory of all sources of information, federal and provincial, thereby directing him to the proper channels from which he may draw published material relating to any particular subject.

The Dominion Bureau of Statistics.—The Dominion Bureau of Statistics was set up by Statute in 1918 as a central statistical department for Canada (8-9 Geo. V, c. 43). In 1948 this statute, which had been consolidated as the Statistics Act (R.S.C. 1927, c. 190), was repealed and replaced by the Statistics Act (R.S.C. 1952, c. 257), subsequently amended in March 1953 (1-2 Eliz. II, c. 18).

The chief aims of the Dominion Bureau of Statistics are: (1) to furnish statistical data bearing on Canada for government and administration, whether municipal, provincial, national or international; and (2) to assist in meeting the needs of non-governmental users of statistics, arising from a growing awareness of the value of statistics to business efficiency and social planning.

Inquiries.—Hundreds of individual requests for information are received each day in the Information Services Division of the Bureau, routed through the appropriate divisions and answered as expeditiously as possible. Since the field of effort from the statistical side deals with all phases of the national economy, there is scarcely a subject upon which the Bureau is not able to give some information. Nevertheless only inquiries of a statistical nature should be directed to the Dominion Bureau of Statistics.

Publications.—Dominion Bureau of Statistics reports cover all aspects of the national economy; the *Canada Year Book* and *Official Handbook Canada* constitute authoritative compendiums of information on the institutions and economic and social development of Canada.

DBS publications are listed in a catalogue of *Current Publications* and in the Queen's Printer's *Catalogue of Canadian Government Publications*. The *DBS Daily Bulletin* and *Weekly Bulletin*, available from the Bureau's Information Services Division at an annual subscription of \$1.00 each, are designed to serve persons wishing to keep closely informed on the full range of published information issued by the Bureau. Subscription orders for DBS publications or orders for single copies should be addressed to the Information Services Division, Dominion Bureau of Statistics, Ottawa, and should contain the necessary remittance in the form of a cheque or money order made payable to the Receiver General of Canada.

Information Division, Department of External Affairs.—The Information Division has two functions: to promote within Canada interest in and knowledge of international affairs, and to make Canada and Canadian policies better known and understood abroad.

To perform the first function the Division produces and distributes various documents on external affairs—statements of government policy and reports on related developments abroad and on the work of the Department generally. The Division also answers inquiries from Canadian sources on these subjects as well as requests for information about Canada made by Diplomatic Missions at Ottawa, by Canadian posts abroad, and by individuals and organizations in other countries.

Most of the information work abroad is done, however, by officials at Canadian posts. The Information Division assists by formulating and advising on information policy abroad in an effort to ensure that this policy is related to the general objectives of Canadian foreign policy, and by producing and procuring material to keep Missions informed of developments within Canada. Journalists and others who visit Canada to write of Canadian affairs are given assistance from time to time by the Division; its responsibilities also include the co-ordination of the Government's activities in the field of cultural relations.

Trade Publicity Branch, Department of Trade and Commerce.—For details see p. 1040.

Information Services Division, Department of National Health and Welfare.—The responsibility of this Division, in co-operation with other divisions of the Department of National Health and Welfare and provincial authorities, is the production and distribution of educational material on health, welfare, social security and civil defence, for use

throughout the country. This information, issued in the English and French languages, includes books, pamphlets, periodicals, posters, exhibits, displays, radio dramatizations, press and magazine features and releases, as well as films and film-strips prepared in co-operation with the National Film Board. Books, pamphlets, posters and displays are distributed in Canada through provincial authorities. The most important periodicals published by the Division are *Canada's Health and Welfare* (monthly), *Canadian Nutrition Notes* (monthly), *Occupational Health Bulletin* (monthly), *Industrial Health Review* (semi-annually) and *Nutrition Bulletin* (annually).

Canadian Broadcasting Corporation.—Television and radio broadcasting are important mediums of information to the public along with newspapers, films and other means of communication. Broadcasting in Canada combines, in one national system, publicly owned stations and privately owned local community stations, many of which are affiliated with the Canadian Broadcasting Corporation's networks.

Since its establishment in 1936 the Canadian Broadcasting Corporation has become one of the most effective channels through which information, official and unofficial, is broadcast to the people of Canada. Radio is relatively more important in Canada than in most countries because of the widely distributed population and the number of sparsely peopled areas, and the CBC has gradually bridged the gaps with high-powered transmitters designed to serve rural as well as urban areas. The CBC has also pioneered in the development of low-powered repeater stations attached to the network lines, which serve areas unable, because of topographical conditions, to receive an adequate signal, from any existing station.

News broadcasts and information programs occupy a considerable proportion of national and regional network time. All CBC schedules include news, music, drama, informative talks, children's programs, school broadcasts, public service broadcasts, sports, women's activities, etc. There is a very wide range of radio and television fare, since the CBC not only produces its own programs in the various production centres across Canada but brings in selected programs from the networks of the United States, the British Broadcasting Corporation and other national radio and television systems. The CBC maintains a bureau at London, England, and at United Nations Headquarters in New York, and is credited with having done more to inform listeners of United Nations activities than any other broadcasting system.

Through the International Service operated by the CBC on behalf of the Canadian Government, programs are broadcast over shortwave in 16 languages: English, French, German, Dutch, Danish, Norwegian, Swedish, Italian, Spanish, Portuguese, Czech, Slovak, Russian, Ukrainian, Polish and Hungarian. The CBC International Service broadcasts information abroad on life and economic conditions in Canada as part of the general information plan for promoting a better understanding of Canada in other countries. In addition to this regular shortwave program service, the International Service provides special programs for transmission by broadcasting systems in other countries by means of shortwave relays or recordings on tape or disc. A library of musical and spoken-word programs is made available to foreign broadcasting systems through processed transcriptions for wide distribution.

National Film Board.—The National Film Board produces films, film-strips and still photographs on a great variety of subjects. In keeping with its terms of reference, the Board's products are both informative and interpretative, and are widely distributed throughout the world through theatrical and television media and non-theatrical channels.

In Canada, films are seen non-theatrically by the public by means of a distribution network of more than 600 film libraries and voluntary organizations which provide local facilities for community use of films placed in circulation through sales and loans. The Board maintains a preview library of 5,000 prints from many sources; libraries are also maintained containing films on such subjects as health, medicine, sociology and industry for the use of government departments and special-interest groups.

Non-theatrically abroad, the National Film Board provides films and assistance to libraries operated by the Department of External Affairs in 54 Missions, to nine libraries operated in trade posts by the Department of Trade and Commerce, and to diplomatic Missions for use by commercial counsellors. In conjunction with the Canadian Government Travel Bureau, the Board carries out a travel film program to encourage travel in Canada by United States residents by arranging film distribution through 493 outlets in that country and by providing a special library of travel films for television use. Exchange and loan agreements are made with governmental and other organizations in many countries in order to obtain or extend distribution wherever possible. National Film Board offices abroad are located in New York and Chicago in the United States, New Delhi in India, and London, England.

The Board's library of approximately 100,000 still photographs serves government departments, commercial photographers, newspapers, periodicals and many other organizations in Canada and abroad.

Section 2.—Directory of Sources of Official Information (Federal and Provincial)

To make the best use of the Directory of Sources of Government Official Information, it is necessary that the reader understand the broad differences in function between federal and provincial departments and their separate fields of work.

Certain fields of effort, such as trade and commerce, customs and excise, currency and banking, navigation, transportation, radio, census of population and national defence are constitutionally federal affairs and in such fields the respective Departments at Ottawa are the proper sources with which to communicate. Other fields of effort such as the administration of lands and natural resources, education, roads and highways, and health and hospitals are the responsibility of the provinces but certain Federal Departments are also concerned with specific aspects of these subjects and, as is the case of the Dominion Bureau of Statistics, in the co-ordination and presentation of the material for Canada as a whole.

As a general guide to the public, it may be pointed out that questions relating to the actual development and administration of resources should be forwarded to the particular provinces concerned. The Government of Canada, while not administering the resources within provincial boundaries, co-operates closely with the provinces and is in a position to furnish material for Canada, especially production data on a national basis, marketing data on international, national and provincial bases, research work and experimental station data on a national basis, and also on a provincial basis from Federal Government stations located within particular provinces. In agriculture, for instance, data on the breeding of livestock and the improvement of strains, on agricultural marketing and on crop yields are cases in point; in forestry, questions of forest research, forest fire protection and reforestation offer good examples. Inquiries directed to federal sources for information not of a statistical nature should as a general rule be sent to the individual Departments listed in the Directory; inquiries for information of a statistical nature should be addressed to the Information Services Division, Dominion Bureau of Statistics, Ottawa.

Sale of Official Publications.—Under the provisions of the Public Printing and Stationery Act, the Queen's Printer and Controller of Stationery, Ottawa, has charge of the sale of all official publications of Parliament and the Government of Canada that are issued to the public, as well as of the free distribution of all public documents and papers to persons and institutions (libraries) entitled by statutory provisions to receive them. The Dominion Bureau of Statistics acts as the agent of the Queen's Printer with respect to the sale of DBS publications and issues an annual catalogue entitled *Current Publications*.

The regulations relating to the distribution and sale of government publications made in accordance with the provisions of Sect. 7 of the Public Printing and Stationery Act and Sect. 7 (e) of the Financial Administration Act were brought up to date and approved by Treasury Board on Mar. 31, 1955.

In compliance with these regulations, the Queen's Printer and Controller of Stationery issues the *Daily Checklist of Government Publications* which records for the information of the public service, libraries, etc., all Federal Government publications immediately upon release. Those authorized by law or regulation to receive free copies of government publications receive the *Daily Checklist* without charge; others desiring the service may purchase an annual subscription to be forwarded daily or in weekly batches as requested.

The Queen's Printer and Controller of Stationery also issues the *Monthly Catalogue of Canadian Government Publications*, a comprehensive listing of all official publications, public documents and papers not of a confidential nature published at government expense, an *Annual Catalogue* (in January) listing all publications issued during the previous year, as well as sectional catalogues and selected titles bulletins advertising new government publications.

Most provincial government publications may be obtained from the Queen's Printer of the province concerned. Inquiries should be addressed to the provincial capital cities:—

Newfoundland.....	St. John's	Ontario.....	Toronto
Prince Edward Island...	Charlottetown	Manitoba.....	Winnipeg
Nova Scotia.....	Halifax	Saskatchewan.....	Regina
New Brunswick.....	Fredericton	Alberta.....	Edmonton
Quebec.....	Quebec	British Columbia.....	Victoria

Inquiries about the Yukon and Northwest Territories should be addressed to the Northern Administration Branch, Department of Northern Affairs and National Resources, Ottawa.

(Detailed Directory of Sources of Official Information follows, pp. 1183-1213.)

DIRECTORY OF SOURCES OF OFFICIAL INFORMATION

NOTE.—In the "Federal Data" column, the major source of information on each subject is given first; other sources follow in alphabetical order, with the exception of the National Film Board and the Dominion Bureau of Statistics which appear at the end of each listing with which they are concerned, except where they are the major source.

PART II.—SPECIAL MATERIAL PUBLISHED IN FORMER EDITIONS OF THE CANADA YEAR BOOK

It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions. Therefore the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the 1959 Year Book with its predecessors in respect of matters that have not been subject to wide change. Those Sections of Chapters, such as "Population", which are automatically revived when later census material is made available and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article includes material not repeated in the later one. When an article covers more than one subject it is listed under each appropriate heading.

The articles marked with an asterisk (*) are available in reprint form from the Information Services Division, Dominion Bureau of Statistics.

Unemployment Insurance Commission.—1959. *Apr. 30*, A. F. MacArthur, Toronto, Ont., International Representative, Office Employees International Union: to be Commissioner for a period of five years.

War Veterans Allowance Board.—1958. *Nov. 18*, Hilton Benjamin Mersereau: to be a member, effective Dec. 1, 1958.

PART IV. -FEDERAL LEGISLATION 1957-59

This classified list of federal legislation has been compiled from the Statutes. Naturally in summarizing material of this kind it is not always possible to convey the full implication of the legislation. The reader who is interested in any specific Act is therefore referred to the Statutes of Canada in the given volume and chapter.

**Legislation of the First Session of the Twenty-Third Parliament,
Oct. 14, 1957 to Feb. 1, 1958**

Subject, Chapter and Date of Assent	Synopsis
6 Eliz. II	
Agriculture—	
2 Nov. 7	<i>Prairie Grain Advance Payments Act</i> provides advance payment to producers, for threshed grain in storage other than in an elevator and prior to delivery to the Canadian Wheat Board. The Act replaces the <i>Prairie Grain Producers Interim Financing Act</i> (4-5 Eliz. c. 1).
22 Jan. 31	<i>Agricultural Stabilization Act</i> provides mandatory price support for nine agricultural commodities—cattle, hogs, sheep, cheese, butter, eggs and wheat, oats and barley produced outside the jurisdiction of the Canadian Wheat Board—and for other commodities that may be named from time to time. A revolving fund, not to exceed \$250,000,000, is established for stabilization assistance to be supplemented by receipts from the sale of commodities purchased under the terms of the Act. The <i>Agricultural Prices Support Act</i> is repealed by this legislation.
Finance—	
1 Oct. 24	<i>Appropriation Act No. 6, 1957</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1958.
9 Dec. 5	<i>Appropriation Act No. 7, 1957</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1958.
21 Jan. 7	<i>Appropriation Act No. 1, 1958</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1958.
29 Jan. 31	<i>An Act to amend the Federal-Provincial Tax-Sharing Arrangements Act</i> authorizes payment of an annual grant of \$7,500,000 to each of the provinces of Nova Scotia, New Brunswick and Newfoundland, and \$2,500,000 to Prince Edward Island for the four fiscal years commencing Apr. 1, 1958. The rate used in computing the "standard individual income tax", on which payments under the <i>Federal-Provincial Tax-Sharing Arrangements Act</i> are in part based, is changed from 10 p.c. to 13 p.c. for the year ending Mar. 31, 1959, thus increasing the payments to be made to the provinces in that year.
Health and Welfare—	
3 Nov. 7	<i>An Act to amend the Old Age Security Act</i> increases the amount of monthly pensions payable under the Act to \$55 per month, reduces the residence requirement for pensioners from 20 to 10 years, and increases the length of permissible temporary absence from Canada from three to six months.
4 Nov. 21	<i>An Act to amend the Blind Persons Act</i> increases the maximum amount of allowance payable to the provinces for blind persons to 75 p.c. of \$55 per month per person from the previous 75 p.c. of \$46 per month, and increases the amounts of allowable income.
5 Nov. 21	<i>An Act to amend the Disabled Persons Act</i> increases the maximum amount of allowance payable to the provinces for disabled persons to 50 p.c. of \$55 per month per person from the previous 50 p.c. of \$46, provides payments for certain additional persons who are patients in institutions, and increases the amounts of allowable income.
6 Nov. 21	<i>An Act to amend the Old Age Assistance Act</i> authorizes payments to the provinces of 50 p.c. of \$55 per month instead of the previous 50 p.c. of \$46, alters the residence requirement from 20 to 10 years and increases the amounts of permissible income.
7 Nov. 21	<i>An Act to amend the War Veterans Allowance Act, 1952</i> increases the monthly rates of certain allowances and amounts of permissible income, extends to six months the period of absence from Canada for which allowance may be paid, and increases the salaries of the members of the War Veterans Allowance Board.
19 Dec. 20	<i>An Act to amend the Pension Act</i> provides in general for additional benefits for former members of the Forces and their dependants and brings other benefits more in line with increases in the basic scale of pensions for disability which became effective July 1, 1957.

**Legislation of the First Session of the Twenty-Third Parliament,
Oct. 14, 1957 to Feb. 1, 1958—continued**

Subject, Chapter and Date of Assent	Synopsis
Insurance—	
11 Dec. 20	<i>An Act to amend the Canadian and British Insurance Companies Act</i> provides that a majority of all the directors be Canadian citizens ordinarily resident in Canada in addition to the former requirement that a majority of the directors elected by the shareholders be Canadian citizens resident in Canada, and also makes a number of administrative changes in the Act.
15 Dec. 20	<i>An Act to amend the Export Credits Insurance Act</i> increases from \$100,000,000 to \$200,000,000 the total liability that the Corporation may have outstanding at any time under contracts of insurance entered into under the terms of the Act.
Labour—	
8 Nov. 28	<i>An Act to amend the Unemployment Insurance Act</i> provides that seasonal benefit may be paid during the period from Dec. 1 to May 15, in place of the former Jan. 1 to Apr. 15, and increases the benefits payable during that period.
20 Dec. 20	<i>An Act to amend the Unemployment Assistance Act</i> removes the so-called "threshold" provision which was originally intended to establish, by calculating a stipulated percentage of the population of each province, a deduction from reimbursement claims by the provinces for persons who were, in fact, unemployable. Two other provisions, now obsolete, are also removed from the Act.
24 Jan. 31	<i>Annual Vacations Act</i> provides for an annual vacation with pay of at least two weeks in respect of every year of employment in industries under federal labour jurisdiction; in the case of continuous employment for one year but less than two, the vacation with pay to which the employee is entitled for the first completed year is one week.
National Revenue—	
14 Dec. 20	<i>An Act to amend the Excise Tax Act</i> implements the change in the excise tax on automobiles announced in the House of Commons on Dec. 6, 1957, reducing the tax on passenger cars from 10 p.c. to 7½ p.c.
17 Dec. 20	<i>An Act to amend the Income Tax Act</i> implements changes in income tax announced in the House of Commons Dec. 6, 1957. These changes include the raising from \$20,000 to \$45,000 of the profit figure below which the corporation income tax rate of 20 p.c. applies; the increase of personal income tax exemptions from \$150 to \$250 for children of family allowance age, and from \$400 to \$500 for others; reduction of the rate of personal income tax in the two lowest taxable brackets to 11 p.c. and 14 p.c. from 13 p.c. and 15 p.c.
27 Jan. 31	<i>Canada-Australia Income Tax Agreement Act, 1957</i> implements an agreement between Canada and Australia for the avoidance of double taxation and the prevention of fiscal evasion with respect to taxes on income.
Transportation—	
10 Dec. 20	<i>An Act to amend an Act respecting the Buffalo and Fort Erie Public Bridge Company</i> alters the existing Canadian Act to provide for increased Canadian representation on the Bridge Authority and for extending the life of that Authority for an agreed period of time. This legislation makes the appropriate amendments to the Act following Canada-United States agreement to revise the character of the Authority in accord with its international status and the joint interest of both countries in its property.
13 Dec. 20	<i>An Act respecting the Construction of a Line of Railway by Canadian National Railway Company from Optic Lake to Chisel Lake, and the Purchase by Canadian National Railway Company from the International Nickel Company of Canada, Limited, of a Line of Railway from Sipiwesk to a Point on Burntwood River near Mystery Lake, all in the Province of Manitoba</i> provides for the purchase of an existing 30-mile railway line from Sipiwesk to Mystery Lake, and authorizes construction of a new 52-mile line between Optic Lake and Chisel Lake, Man.
16 Dec. 20	<i>The Hamilton Harbour Commissioners Act</i> provides for federal loans to the Hamilton Harbour Commissioners up to an aggregate amount of \$4,000,000 to construct additional dockage and other facilities in Hamilton harbour.
Miscellaneous—	
12 Dec. 20	<i>An Act to amend the Canadian Vessel Construction Assistance Act</i> extends the benefits of the Act to give further encouragement to the construction and conversion of vessels in Canada.
18 Dec. 20	<i>An Act to amend the National Housing Act, 1954</i> , among other amendments, reduces the down payments required from home owners and from co-operative housing associations; and increases the maximum charge on federal funds for housing to \$400,000,000.
23 Jan. 31	<i>Alberta-Northwest Territories Boundary Act</i> approves the boundary between the province of Alberta and the Northwest Territories as surveyed and marked on the ground, the surveying and marking having been completed between 1950 and 1954.

**Legislation of the First Session of the Twenty-Third Parliament,
Oct. 14, 1957 to Feb. 1, 1958—concluded**

Subject, Chapter and Date of Assent	Synopsis
Miscellaneous—conc.	
25 Jan. 31	<i>Atlantic Provinces Power Development Act</i> assists in making electric power for industrial purposes available in the Atlantic Provinces in a suitable quantity and at lower cost. The assistance will be extended through the agencies of the Dominion Coal Board and the Northern Canada Power Commission.
26 Jan. 31	<i>An Act to authorize a Loan to the Government of New Brunswick in respect of the Beechwood Power Project</i> provides for a federal loan of up to \$30,000,000 to cover the cost of the Beechwood Power Project on the St. John River for the New Brunswick Electric Power Commission.
28 Jan. 31	<i>An Act to amend the Criminal Code</i> corrects an error appearing in the French version of the Code.
30 Jan. 31	<i>An Act to amend the Northwest Territories Act</i> extends the legislative powers of the Commissioner in Council respecting borrowing and lending of money for local projects and purposes.

**Legislation of the First Session of the Twenty-Fourth Parliament,
May 12 to Sept. 6, 1958**

Subject, Chapter and Date of Assent	Synopsis
7 Eliz. II	
Agriculture—	
5 June 26	<i>An Act to amend the Canada Agricultural Products Standards Act</i> extends the Act to include leaf tobacco so that standards may be established for interprovincial and export transactions.
11 Aug. 7	<i>An Act to amend the Animal Contagious Diseases Act</i> removes the statutory limits on the amount of compensation for cattle slaughtered under the provisions of the Act, except when slaughtered pursuant to area or herd disease eradication programs, in which case the limits are increased.
14 Aug. 7	<i>An Act to amend the Canadian Farm Loan Act</i> increases the authorized capital of the Board from \$4,000,000 to \$6,000,000.
15 Aug. 7	<i>An Act to amend the Prairie Farm Assistance Act</i> extends the benefits of the Act and makes certain administrative changes.
16 Aug. 7	<i>An Act to amend the Prairie Grain Advance Payments Act</i> adds a further exemption of deliveries in exchange for seed grain in addition to other administrative changes.
Citizenship—	
19 Aug. 13	<i>An Act to amend the Indian Act</i> makes inapplicable to persons now registered as Indians and to their descendants the provision of the Act stating that persons who have received or have been allotted half-breed lands or money script, and their descendants, are not entitled to be registered as Indians.
24 Sept. 6	<i>An Act to amend the Canadian Citizenship Act</i> removes certain discriminations previously existing against other than natural-born Canadian citizens in relation to loss of Canadian citizenship. When doubt exists as to whether a person has lost his Canadian citizenship a ruling may be obtained from a commission or court, the decision of which is final.
Finance—	
1 May 16	<i>Appropriation Act No. 2, 1958</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1959.
4 June 5	<i>Appropriation Act No. 3, 1958</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1959.
10 Aug. 7	<i>Appropriation Act No. 4, 1958</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1959.
21 Sept. 6	<i>Special Appropriation Act, 1958</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1959.

**Legislation of the First Session of the Twenty-Fourth Parliament,
May 12 to Sept. 6, 1958—continued**

Subject, Chapter and Date of Assent	Synopsis
Finance—concluded	
31 Sept. 6	<i>An Act to amend the Financial Administration Act</i> authorizes deletion from the accounts of any uncollectable debt not exceeding \$25; clarifies the regulations with respect to the issuing of special warrants for urgently required payments when Parliament is not in session and makes other administrative changes relating to the destruction of cheques after payment and the accounts of Crown corporations.
44 Sept. 6	<i>Appropriation Act No. 5, 1958</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1959.
Health and Welfare—	
6 June 26	<i>An Act to amend the Hospital Insurance and Diagnostic Services Act</i> restricts certain in-patient services to those administered in hospital and extends out-patient services to items previously excluded. It also authorizes contributions as of July 1, 1958, to a participating province which has a plan in operation, whether or not there are other participating provinces.
25 Sept. 6	<i>An Act to amend the Children of War Dead (Education Assistance) Act</i> extends the benefits of the Act to other classes of persons and increases the allowance that may be paid in certain cases.
41 Sept. 6	<i>An Act to amend the Returned Soldiers' Insurance Act</i> makes a minor alteration in wording to bring the provisions of the Act in line with the Veterans Insurance Act.
43 Sept. 6	<i>An Act to amend the Veterans Insurance Act</i> fixes Sept. 30, 1962, as the last day for entering into contracts of insurance with members of the regular forces who continued to serve until then or are discharged prior to that date.
Justice—	
33 Sept. 6	<i>An Act to amend the Judges Act</i> authorizes the payment of salaries of two additional judges of the High Court of Ontario, one additional judge of the Appeal Division of the Supreme Court of New Brunswick and six additional judges for the County Courts of Ontario.
38 Sept. 6	<i>The Parole Act</i> repeals the <i>Ticket of Leave Act</i> (R.S.C. 1952, c. 264) and sets up a new system for the conditional liberation of persons undergoing sentences of imprisonment. The new legislation implements the recommendations of the Fauteux Committee and authorizes the establishment of a National Parole Board with absolute jurisdiction over matters of parole.
39 Sept. 6	<i>An Act to amend the Penitentiary Act</i> , by repealing a subsection of the Statute, permits the extension of the tenure of office of the Commissioner and of the Deputy Commissioner beyond the age of 65 years, a limitation previously in force.
Labour—	
2 May 16	<i>An Act to amend the Unemployment Insurance Act</i> places the seasonal benefit termination date at June 28, 1958, rather than May 18, 1958.
7 July 26	<i>British Columbia Coast Steamship Service Act</i> provides for the appointment of an administrator to resume immediately the ferry service between the mainland of British Columbia and Vancouver Island, suspended by reason of a strike, and grants an 8-p.c. increase in wages established by existing collective agreements. This Act will expire no later than the thirtieth sitting day of the next session of Parliament.
National Revenue—	
12 Aug. 7	<i>Canada-Belgian Congo Income Tax Convention Act, 1958</i> extends to the Belgian Congo and the Territory of Ruanda-Urundi the terms of the Convention between Canada and Belgium for the avoidance of double taxation with respect to income taxes.
13 Aug. 7	<i>The Canada-Belgium Income Tax Convention Act, 1958</i> implements a Convention between Canada and Belgium for the avoidance of double taxation and the prevention of fiscal evasion with respect to taxes on income.
26 Sept. 6	<i>An Act to amend the Customs Act</i> establishes a more workable scheme for determining value for duty of goods imported, by revising the Sections of the Act concerned with such determination.
27 Sept. 6	<i>An Act to amend the Customs Tariff Act</i> implements the Budget resolutions on the <i>Customs Tariff Act</i> .

**Legislation of the First Session of the Twenty-Fourth Parliament,
May 12 to Sept. 6, 1958—concluded**

Subject, Chapter and Date of Assent	Synopsis
National Revenue—concl.	
29 Sept. 6	<i>Estate Tax Act</i> , as at the date of its coming into force, replaces the <i>Dominion Succession Duty Act</i> and sets forth in detail all legislation respecting the taxation of estates, consolidating, revising and simplifying the previous legislation. Under the new Act the tax on property passing or deemed to pass on death, will be computed by reference to the property comprising the estate of the deceased rather than the property contained in the bequests from the estate to the beneficiaries.
30 Sept. 6	<i>An Act to amend the Excise Tax Act</i> implements the Budget resolutions on the <i>Excise Tax Act</i> .
32 Sept. 6	<i>An Act to amend the Income Tax Act</i> gives effect to the Budget resolutions <i>re</i> the <i>Income Tax Act</i> .
Transportation and Communications—	
17 Aug. 13	<i>The Canadian National Railways Financing and Guarantee Act, 1958</i> authorizes moneys to meet certain capital expenditures of the CNR system and the guarantee of certain securities to be issued by the Company.
22 Sept. 6	<i>The Broadcasting Act</i> establishes a Board of Broadcast Governors to regulate broadcasting in Canada (separate regulatory body); provides that the expenditure of the Board shall be paid out of Parliamentary appropriations and also provides for the continuance of the Canadian Broadcasting Corporation to operate a national broadcasting service in Canada.
23 Sept. 6	<i>Campobello-Lubec Bridge Act</i> authorizes the construction of a bridge across Lubec Channel between the Province of New Brunswick and the State of Maine.
34 Sept. 6	<i>The Lakehead Harbour Commissioners Act</i> establishes a Corporation to manage and develop the harbours of Port Arthur, Fort William and Thunder Bay in the Province of Ontario, with powers similar to those of other harbour corporations established in the past.
40 Sept. 6	<i>An Act to amend the Railway Act</i> makes financial and regulative provision for the placing of reflective markings on the sides of railway cars and extends the regulations regarding signboards at level crossings to include the use of reflective material.
Miscellaneous—	
3 May 20	<i>An Act to amend the National Housing Act, 1954</i> increases the maximum charge on the Consolidated Revenue Fund to \$750,000,000 for housing purposes.
8 July 26	<i>An Act to amend the National Parks Act</i> alters the boundaries of Cape Breton Highlands National Park by withdrawing an area of nearly 10 sq. miles from the Park.
9 July 26	<i>An Act to amend the Yukon Act</i> provides a more accurate description of the eastern boundary of the Yukon Territory as determined by surveys; extends powers of the Commissioner in Council respecting the borrowing and lending of money for local purposes; and makes minor adjustments <i>re</i> intoxicants and the administration of justice.
20 Aug. 13	<i>An Act to amend the Lake of the Woods Control Board Act, 1921</i> provides for the appointment of a member to the Board by the Lieutenant-Governor of Manitoba in Council and for the appointment of alternate members to act in place of members of the Board who may be absent or unable to act.
28 Sept. 6	<i>An Act to amend the Emergency Gold Mining Assistance Act</i> extends the Act to the years 1959 and 1960 and provides for a 25-p.c. increase in the amount of assistance for the years 1958, 1959 and 1960.
36 Sept. 6	<i>An Act to authorize certain amendments to the Agreement made under the Maritime Coal Production Assistance Act with the Dominion Coal Company, Limited</i> , authorizes amendment, with particular respect to the terms of repayment, of the loan agreement made with the Dominion Coal Company Limited under the provisions of the <i>Maritime Coal Production Assistance Act</i> .
37 Sept. 6	<i>The National Capital Act</i> revises the <i>Federal District Commission Act</i> to enable the Commission to discharge more effectively its duties in connection with the preparation of plans for, and assistance in, the development and improvement of the National Capital Region. The names of the Act and of the Commission are changed and the Commission's organization, powers and financing are substantially revised.

**Legislation of the Second Session of the Twenty-Fourth Parliament,
Jan. 15 to July 18, 1959**

Subject, Chapter and Date of Assent	Synopsis
7-8 Eliz. II	
Agriculture—	
25 July 8	<i>An Act to amend the Farm Improvement Loans Act</i> extends the operations of the Act to June 30, 1962; provides a new maximum amount of guaranteed bank loans of \$300,000,000; extends the list of eligible borrowers to include beekeepers; and includes poultry with livestock. The maximum amount of individual loan is raised from \$5,000 to \$7,500.
35 July 8	<i>Seeds Act</i> revises former legislation respecting the testing, inspection and sale of seeds to meet recent trends and developments in production, processing and merchandising; no important changes are made in policy.
42 July 18	<i>The Crop Insurance Act</i> authorizes federal contributions and loans in respect of the operation of provincial schemes for crop insurance.
43 July 18	<i>Farm Credit Act</i> establishes a system of long-term mortgage credit to farmers to be administered by a Farm Credit Corporation with a capital of \$8,000,000. The Act incorporates and extends the former <i>Canadian Farm Loan Act</i> and adds a new type of supervised farm mortgage credit. Individual loans are limited to \$20,000 on a single farming enterprise with each loan not to exceed 75 p.c. of the appraised value of the land. The aggregate of loans outstanding at any time may not exceed \$200,000,000.
44 July 18	<i>The Humane Slaughter of Food Animals Act</i> authorizes the Governor in Council to make regulations respecting the methods and devices to be employed to ensure humane slaughter of food animals in an establishment registered under the Meat Inspection Act.
Finance—	
1 Feb. 25	<i>Appropriation Act No. 1, 1959</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1959.
2 Mar. 20	<i>Appropriation Act No. 2, 1959</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1960.
3 Mar. 20	<i>Appropriation Act No. 3, 1959</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1959.
11 June 4	<i>Appropriation Act No. 4, 1959</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1960.
19 July 8	<i>An Act to amend the Bretton Woods Agreements Act</i> provides for an increase in Canada's subscriptions to the International Monetary Fund and to the International Bank for Reconstruction and Development to a maximum of the Canadian dollar equivalent of 1,300,000,000 United States dollars. As the rate of exchange is now variable it is expedient to describe Canada's obligations under the Act in United States dollars rather than as a fixed amount in Canadian dollars, as formerly.
21 July 8	<i>The Canadian Forces Superannuation Act</i> revises and consolidates certain pension provisions of the <i>Defence Services Pension Act</i> and provides for the payment of superannuation and other benefits to members of the Canadian Forces and their dependants.
26 July 8	<i>An Act to amend the Federal-Provincial Tax-Sharing Arrangements Act</i> extends for another year the rate of 13 p.c. for standard individual income tax for the purpose of calculating the tax equalization payments to the provinces and the amounts payable to the provinces under the tax rental agreements.
32 July 8	<i>The Public Service Pension Adjustment Act</i> provides for, and places on a continuing basis, increases in certain pensions being paid to former civil servants, members of the Armed Forces, members of the Royal Canadian Mounted Police or to their dependants.
48 July 18	<i>Newfoundland Additional Grants Act</i> authorizes the payment of additional annual grants to the Province of Newfoundland for the fiscal years 1957-58 to 1961-62 in accordance with the scale contained in the Report of the Royal Commission on Newfoundland Finances established under Term 29 of the Terms of Union of Newfoundland with Canada.
55 July 8	<i>Appropriation Act No. 5, 1959 (Main Supply)</i> grants certain sums of money for the public service of the financial year ending Mar. 31, 1960.

**Legislation of the Second Session of the Twenty-Fourth Parliament,
Jan. 15 to July 18, 1959—continued**

Subject, Chapter and Date of Assent	Synopsis
Government—	
7 Mar. 20	<i>An Act to amend the Northwest Territories Act</i> provides for the appointment by the Governor in Council of judicial as well as of administrative officers; the term of office for each Council is fixed at three years; and protection is provided for archaeological sites, works, and objects, etc., of historical or ethnological importance.
15 June 4	<i>Parliamentary Secretaries Act</i> provides for the appointment, from among members of the House of Commons, of 16 Parliamentary Secretaries to Ministers at an annual salary of \$4,000 each. Appointments are for one year, and appointees are not disqualified from sitting in the House of Commons or voting therein by reason of their holding the office of Parliamentary Secretary.
16 June 4	<i>An Act to amend the Representation Act</i> changes the name of the electoral district of "Témiscouata" to that of "Rivière-du-Loup—Témiscouata".
Health and Welfare—	
14 June 4	<i>An Act to amend the Old Age Security Act</i> augments the Old Age Security Fund by increasing the sales tax, for purposes of the Act, to 3 p.c. from 2 p.c., the tax on personal income to 3 p.c. from 2 p.c. subject to a limit of \$90 annually, and the tax on corporation income to 3 p.c. from 2 p.c.
17 June 4	<i>An Act to amend the Veterans Rehabilitation Act</i> provides for new amendments concerning veterans to meet changing conditions and circumstances.
18 June 4	<i>An Act to amend the War Service Grants Act</i> makes deletions and revisions to the legislation to meet changing conditions and circumstances.
34 July 8	<i>Royal Canadian Mounted Police Superannuation Act</i> revises and consolidates those provisions of the <i>Royal Canadian Mounted Police Act</i> providing for the payment of pensions based on service in the Force and pensions in respect of injury or death on service; it also includes certain amendments to provisions of the same Act that will continue to apply in respect of members of the Force appointed before Mar. 1, 1949.
37 July 8	<i>An Act to amend the Veterans' Land Act</i> , in addition to administrative changes, provides further financial assistance to veterans for home construction and to veterans settled under the Act as full-time farmers, part-time farmers or commercial fishermen.
Justice—	
28 July 8	<i>An Act to amend the Judges Act</i> provides salaries for three additional puisne judges of the Superior Court of Quebec, two additional judges of the Supreme Court of British Columbia and two additional judges of the Trial Division of the Supreme Court of Alberta.
31 July 8	<i>An Act to amend the Prisons and Reformatories Act</i> authorizes transfer of certain prisoners in New Brunswick and Manitoba.
40 July 18	<i>An Act to amend the Combines Investigation Act and the Criminal Code</i> specifically exempts arrangements between fishermen or associations of persons engaged in the buying or processing of fish in British Columbia with respect to the price, the remuneration or other conditions under which fish shall be caught and supplied between Jan. 1, 1959 and Dec. 31, 1960, from anti-combines legislation which would otherwise affect them.
41 July 18	<i>An Act to amend the Criminal Code</i> contains a number of important amendments including, among others, a new legal definition of obscenity in publications; the extending to Canadian courts of jurisdiction over indictable offences committed on board certain aircraft while in flight; revisions to those parts of the Code concerning offensive weapons, particularly firearms; and the extension of "communications" as used for illegal book-making and betting practice to include the use of radio; restrictions on news reports of admissions or confessions of guilt in criminal cases before the end of a preliminary hearing; and the mandatory allowance of time for an accused to raise money to pay a fine on conviction of an indictable offence.
54 July 18	<i>The Royal Canadian Mounted Police Act</i> revises and consolidates the administrative and disciplinary provisions of the former <i>Royal Canadian Mounted Police Act</i> , which is now repealed. The Parts of the former Act dealing with pensions, have been revised and are embodied in a separate measure (<i>see c. 34 above</i>).

**Legislation of the Second Session of the Twenty-Fourth Parliament,
Jan. 15 to July 18, 1959—continued**

Subject, Chapter and Date of Assent	Synopsis
Labour—	
36 July 8	<i>An Act to amend the Unemployment Insurance Act</i> raises the "wage ceiling" of insurability to \$5,460 from \$4,800; increases the rates of contributions to be paid on behalf of insured persons and employers; adds new grounds for extension of the qualifying periods; provides a new schedule of rates of benefit, the result of the new table of contributions; provides that maximum benefit may now be paid for 52 instead of 36 weeks; and establishes a new schedule of allowable earnings.
National Revenue—	
12 June 4	<i>An Act to amend the Customs Tariff and the New Zealand Trade Agreement Act, 1932</i> makes various changes in the Tariff Schedules between the two countries.
13 June 4	<i>An Act to amend the Excise Act</i> implements the Budget resolution on the <i>Excise Act</i> increasing excise taxes on spirits and on cigars.
20 July 8	<i>Canada-Finland Tax Convention Act, 1959</i> implements a Convention between Canada and the Republic of Finland for the avoidance of double taxation and the prevention of fiscal evasion with respect to taxes on income.
23 July 8	<i>An Act to amend the Excise Tax Act</i> implements the Budget resolution to amend the <i>Excise Tax Act</i> and makes a number of administrative changes. The excise tax on cigarettes is increased and the export duty on electricity formerly in effect under the <i>Exportation of Power and Fluids and Importation of Gas Act, 1955 (c. 14)</i> is transferred to this Act.
45 July 18	<i>An Act to amend the Income Tax Act</i> implements the Budget resolutions on the <i>Income Tax Act</i> raising the rates to be paid by both individual and corporate taxpayers, applicable to 1958 and subsequent years. Revised schedules of tax rates are included in the Statute.
Trade and Commerce—	
8 Mar. 20	<i>An Act to amend the Public Servants Inventions Act</i> permits a corporate agency to which the administration and control of any patent or invention has been transferred to retain the proceeds therefrom, to be used for the purposes of this Act and the purposes for which the agency was established.
24 July 8	<i>An Act to amend the Export Credits Insurance Act</i> authorizes the Export Credits Insurance Corporation to provide direct and unconditional guarantees to banks or other financial organizations and, in addition, to buy, sell or make loans on guaranteed export paper up to \$200,000,000, thus making available broader sources of financing for exporters of capital goods.
29 July 8	<i>An Act to amend the Length and Mass Units Act</i> changes the value of the pound—the standard unit of mass for Canada—in relation to the international kilogramme, to conform with a recent international agreement.
38 July 8	<i>An Act to amend the Weights and Measures Act</i> changes the value of the pound in relation to the international kilogramme, to conform with a recent international agreement.
49 July 18	<i>An Act to repeal certain Fisheries Laws in force in the Province of Newfoundland respecting the Exportation of Salt Fish</i> repeals certain fisheries laws of Newfoundland providing for the control by export-permit from Newfoundland of codfish, haddock, hake, ling, pollock and cusk in salted form. Under the Terms of Union of Newfoundland with Canada these laws were to continue in force for five years from the date of Union and thereafter until the Parliament of Canada otherwise provided.
Transportation—	
9 Mar. 20	<i>An Act to amend the St. Lawrence Seaway Authority Act</i> increases from \$300,000,000 to \$335,000,000 the limit on amounts that may be borrowed by the Seaway Authority and outstanding at any one time.
10 Mar. 20	<i>An Act to amend the Trans-Canada Highway Act</i> increases by \$100,000,000 to a maximum of \$350,000,000, the amount of expenditures authorized by Sections 4, 5 and 6.
22 July 8	<i>Canadian National Railways Financing and Guarantee Act, 1959</i> , provides moneys to meet certain capital expenditures of the Canadian National Railway System and guarantees certain securities to be issued by the CNR between Jan. 1, 1959 and June 30, 1960.
27 July 8	<i>The Freight Rates Reduction Act</i> provides for the revision of certain class and commodity freight rates and authorizes compensation of the companies to the extent of not more than \$20,000,000.

**Legislation of the Second Session of the Twenty-Fourth Parliament,
Jan. 15 to July 18, 1959—concluded**

Subject Chapter and Date of Assent	Synopsis
Transportation— —concluded	
51 July 18	<i>Pigeon River Bridge Act</i> provides for the construction, maintenance and operation of a toll-free bridge over the Pigeon River near the settlement of that name in Ontario to form a link with the highways in Ontario and the State of Minnesota.
53 July 18	<i>The Queenston Bridge Act</i> authorizes replacement of the International Bridge over the Niagara River from Queenston, Ont. to Lewiston, N. Y.
Miscellaneous—	
4 Mar. 20	<i>An Act to amend the Fisheries Improvement Loans Act</i> extends the provisions of the Act to persons who do not have an interest in a fishing vessel but intend to acquire one, and extends the period during which guaranteed loans may be made to June 30, 1962.
5 Mar. 20	<i>An Act to amend the National Defence Act</i> standardizes the rules of evidence at courts martial; requires unanimous vote of members of court if mandatory punishment is death or to impose death penalty if authorized but not mandatory; and contains other changes in connection with court martial legislation. The Minister is given authority to establish integrated organizations consisting of elements of more than one Service. The name of the Royal Canadian Air Force in French is changed to "Forces aériennes royales du Canada", a more descriptive nomenclature.
6 Mar. 20	<i>An Act to amend the National Housing Act, 1954</i> increases the aggregate amount available for housing loans to \$1,000,000,000 from \$750,000,000 and makes other amendments including the granting of permission to the Corporations to sell mortgages to persons other than approved lenders, and the raising of acquisition fees payable in respect of conveyance of property.
30 July 8	<i>An Act to amend the Prime Minister's Residence Act</i> extends the Act to include property at Harrington Lake (Lac Mousseau) to be used as a country residence for the person holding the office of Prime Minister of Canada.
33 July 8	<i>Queen Elizabeth II Canadian Research Fund Act</i> marks the occasion of Her Majesty's visit to Canada by providing for the establishment and administration of a Fund to aid in research on the diseases of children. The sum of \$1,000,000 is appropriated for the Fund to be administered by a Board of Trustees assisted by the National Research Council.
39 July 18	<i>Coal Production Assistance Act</i> amends the <i>Maritime Coal Production Assistance Act</i> and extends its provisions to coal producers in all parts of Canada. The aggregate principal amount of loans is doubled to \$20,000,000 and the maximum loan to one coal producer increased to \$12,000,000. The operation of the Act is extended to Oct. 31, 1964. Certain other amendments concern the agreement made under the Act with the Dominion Coal Company.
46 July 18	<i>The National Energy Act</i> provides for the establishment of a National Energy Board which shall assure the best use of energy resources in the country, regulate the construction and operation of oil and gas pipelines, the tolls charged for transmission by such pipelines, the export and import of gas, the export of electric power and the construction of lines over which such power is exported. The Board shall study and keep under review all matters relating to energy within the jurisdiction of the Federal Government and shall recommend to the Minister of Trade and Commerce the measures it considers advisable with regard to such matters.
47 July 18	<i>An Act to Confirm an Agreement between the Government of Canada and the Government of the Province of New Brunswick respecting Indian Reserves</i> ratifies and confirms an agreement made on Mar. 25, 1958, between the said governments in relation to lands forming part of Indian reserves in the Province of New Brunswick. Its purpose is to clarify title to the lands in question.
50 July 18	<i>An Act to Confirm an Agreement between the Government of Canada and the Government of the Province of Nova Scotia respecting Indian Reserves</i> ratifies and confirms an agreement made on Apr. 14, 1959, between the said governments in relation to lands forming part of Indian reserves in the Province of Nova Scotia. Its purpose is to clarify title to the lands in question.
52 July 18	<i>An Act to amend the Public Lands Grants Act</i> removes any possible doubts that might exist as to the authority of the Governor in Council to transfer lands to the Crown in right of a province or otherwise.

PART V.—CANADIAN CHRONOLOGY

Events in the general chronology from 1497 to 1866 are given in the 1951 Year Book, pp. 46-49; from 1867 to 1953 in the 1954 Year Book, pp. 1259-1264; for 1954 in the 1955 Year Book, pp. 1329-1330; for 1955 in the 1956 edition, pp. 1233-1234 and for 1956 in the 1957-58 edition, p. 1270. References regarding federal and provincial elections or changes in legislatures or ministries are not included in the following listing but may be found in Chapter II on Constitution and Government and in the Appendix.

1957. *Jan. 2-10*, Strike of CPR employees halting operations on 17,000 miles of track. *Jan. 11*, Canadian aircraft carrier *Magnificent* with troops and supplies for UNEF reached Port Said. *Mar. 5-6*, The United Kingdom Colony of the Gold Coast became a free and independent member of the Commonwealth named Ghana; Canada was represented at the ceremonies by Hon. George Prudham, Minister of Mines and Technical Surveys. *Mar. 6*, The Supreme Court of Canada nullified the Quebec Padlock Law. *Mar. 7*, UNEF took over the Gaza Strip in the Middle East. *Mar. 11*, The 11th Session of the United Nations General Assembly adjourned. *Mar. 18*, Disarmament conference, including United States, United Kingdom, France, Russia and Canada, opened at London, England. *Mar. 25-26*, Prime Minister Macmillan of the United Kingdom and Prime Minister St. Laurent of Canada, met in Bermuda to discuss common problems concerning the Middle East, Far East, NATO, European co-operation, the reunification of Germany, and defence. *May 2-3*, NATO Ministerial Meeting held in Bonn, Germany, to discuss problems of security, political developments within and without the NATO area, events in the Middle East and Hungary and defence of the Atlantic Alliance. *June 15*, Canadian Federation of Mayors and Municipalities Conference held at Montreal, Que. *June 21*, The Hon. Ellen Fairclough appointed Secretary of State for Canada, the first woman to hold a portfolio in a Canadian Cabinet and the second woman Cabinet Minister in the history of the Commonwealth. *June 26-July 5*, Prime Minister Diefenbaker attended the Conference of Commonwealth Prime Ministers in London, England. *July 1*, Official opening of the International Geophysical Year extending to January 1959. *July 3*, Agreement signed between Canada and the United States for the conservation and regulation of the pink salmon fisheries of the Juan de Fuca-Fraser River area of the Pacific Coast. *July 22*, Opening of the hearings of the Royal Commission reviewing Newfoundland's 1949 Terms of Union with Canada. *July 27*, United States Secretary of State John Foster Dulles visited Ottawa for informal talks with Prime Minister Diefenbaker. *July 31*, The Distant Early Warning (DEW) radar line, a combined United States-Canada defence project, officially went into operation. Announcement by Defence Minister Pearkes of the official formation of a North American Air Defence Command (NORAD) to be commanded by Lt.-General Earl Partridge (USAF); deputy commander to be Air Marshal C. Roy Slemon (RCAF). *Aug. 11*, Worst aircraft crash in Canadian aviation history occurred at Issoudun, near Quebec City, when a chartered aircraft returning to Canada from England with veterans and their families crashed and burned, taking the lives of 79 persons. *Aug. 14-Sept. 25*, Canada was host at Ottawa to the 14th Congress of the Universal Postal Union. *Aug. 21*, Prime Minister Diefenbaker announced \$150,000,000 loans program for

low-cost housing. *Aug. 23*, Saskatchewan became the first Province to complete its share of the Trans-Canada Highway with the official opening by Premier T. C. Douglas, of that Province's 406-mile stretch of the Highway. *Aug. 24*, Navy Arctic patrol ship, HMCS *Labrador*, became the first deep-draught vessel to proceed through Bellot Strait. *Aug. 31*, The nine Malayan States became an independent federation within the British Commonwealth of Nations, with Yang Di-Pertuan Besar as the Head of the new Federation. *Sept. 3*, Prime Minister Diefenbaker welcomed more than 1,200 scientists of the International Union of Geodesy and Geophysics from over 50 countries meeting in Toronto, Ont. *Sept. 6*, Rt. Hon. Louis S. St. Laurent announced his retirement as leader of the Liberal Party. *Sept. 15*, The Queen appointed Prime Minister Diefenbaker a member of the Imperial Privy Council. *Sept. 28*, Four-day Conference of Commonwealth Finance Ministers opened at Mont Tremblant, Que. *Oct. 4*, Canadian and United Kingdom Finance Ministers met in Ottawa to discuss trade. The U.S.S.R. successfully launched the first earth satellite—*Sputnik I*. *Oct. 12*, The Hon. Lester B. Pearson the first Canadian to be awarded the Nobel Peace Prize. *Oct. 12-16*, H.M. Queen Elizabeth and H.R.H. Prince Philip arrived in Ottawa beginning a nine-day visit to Canada and the United States. *Oct. 14*, For the first time in Canadian history the reigning monarch officiated at the opening of the Parliament of Canada. *Oct. 18*, Montreal Herald ceased publication on completion of 146th year. *Oct. 24*, United Nations celebrated 12th birthday since signing of the Charter in San Francisco in 1945. *Nov. 3*, NRU, one of the most advanced research and engineering test reactors in the world, started operation at Chalk River, Ont. *Nov. 14*, The Prime Minister announced \$125,000,000-plans for Maritime power development. *Nov. 22*, Delegation of 58 businessmen from all provinces headed by Trade and Commerce Minister Hon. Gordon Churchill left for the U.K. where they toured industrial areas and discussed furthering of trade between the two countries. *Nov. 22*, First vessel passed through Iroquois Lock, the first St. Lawrence Seaway lock to be completed. *Nov. 26*, Two-day Dominion-Provincial Conference at Ottawa ended with federal offer of grants-in-aid to Atlantic Provinces; boosts in unemployment relief. *Dec. 16-19*, A special meeting of 15 Heads of Government of NATO member countries convened in Paris, France, to discuss problems of the free world including the implications of the successful testing by the U.S.S.R. of an intercontinental ballistic missile. Canada was represented by Prime Minister Diefenbaker, External Affairs Minister Smith, Defence Minister Pearkes and Finance Minister Fleming.

1958. *Jan. 1*, Celebrations to commemorate British Columbia's centennial year began. *Jan. 16*, Hon. Lester B. Pearson chosen as national leader of the Liberal Party at convention in

Ottawa. *Jan. 17*, Royal Commission appointed to study dispute between the CPR and the Brotherhood of Locomotive Firemen and Enginemen, headed by Justice Kellock. *Jan. 28*, Queen Mother Elizabeth stopped briefly in Montreal and Vancouver on round-the-world tour. *Feb. 1*, United States Army successfully launched first American earth satellite—*Explorer*. *Feb. 4*, Kellock Royal Commission declared that firemen were unnecessary on diesel engines used by the CPR in its freight and yard operations. *Feb. 17*, Rt. Hon. Louis S. St. Laurent, Prime Minister of Canada from 1948-1957, announced his retirement from active politics. *Apr. 5*, Ripple Rock in Seymour Narrows near Campbell River, B.C., worst underwater shipping hazard on the West Coast, removed by underwater explosion. *Apr. 24-May 20*, Trade mission from the United Kingdom toured Canada exploring ways of expanding British sales in this country. *Apr. 30*, Celebration in Montreal of the 300th anniversary of the first school established in that city by Marguerite Bourgeoys in 1653. *May 28-June 4*, President Theodor Heuss of the Federal Republic of Germany made state visit to Canada, the first German Head of State ever to do so. *June 12*, Prime Minister Macmillan of the United Kingdom addressed a joint session of the Senate and the House of Commons during a visit to Ottawa. *June 21-July 9*, Celebrations in Quebec City marking the 350th anniversary on July 1 of its founding in 1608 by Samuel de Champlain. *July 1*, Canadians celebrated the 91st anniversary of Confederation. Blasting of the cofferdam holding back the waters of the St. Lawrence River touched off the creation of the 100-sq. mile St. Lawrence power pool, permitting, within a few days, the operation of the first generators of the new hydro development and the use of two seaway locks on the U.S. side of the River and of the Canadian seaway lock at Iroquois. Inauguration of Canada's new microwave relay system, completed from coast to coast. Federal-Provincial Hospital Plan went into effect in British Columbia, Alberta, Saskatchewan, Manitoba and Newfoundland. *July 5*, Stephen Leacock Memorial Home at Orillia, Ont. officially opened. *July 8-11*, President Eisenhower of the United States in Ottawa for discussions that resulted in the establishment of a joint Canada-United States Cabinet Committee on defence. *July 12-Aug. 11*, Princess Margaret toured Canada from Victoria to Halifax, visiting seven provinces on her first North American visit. *July 18*, External Affairs Minister Sidney Smith in Washington for talks with British Foreign Secretary Selwyn Lloyd and United States Secretary of State John Foster Dulles regarding the tense Middle East situation. *July 19-23*, Dr. Kwame Nkrumah, Prime Minister of Ghana, visited Montreal and Ottawa and addressed a joint sitting of the Senate and the House of Commons. *July 26*, The Government of Canada signed the agreement previously ratified by the Government of Saskatchewan which authorized commencement of construction work on the South Saskatchewan River Project. *Aug. 20*, The Canadian Board of Geographical Names decided on "Lake St. Lawrence" as the name for the new 35-mile-long lake created by hydro power development on the St. Lawrence River. *Sept. 1-5*, Eighth Quinquennial Congress of the Universities of the British Commonwealth held in Montreal—its first meeting outside the United Kingdom. *Sept. 5*, The Robert H. Saunders Powerhouse officially opened by Canadian and American

dignitaries. *Sept. 7*, World Power Conference opened in Montreal attended by 1,200 delegates from 51 countries. *Sept. 11*, Death of Camillien Houde, seven times mayor of Montreal. *Sept. 15-26*, Commonwealth Trade and Economic Conference held in Montreal. *Sept. 16*, External Affairs Minister Sidney Smith headed Canada's delegation to the 13th General Assembly of the United Nations in New York. *Oct. 1*, Canada House in New York City formally opened at a ceremony presided over by External Affairs Minister Sidney Smith, Mayor Robert Wagner of New York and the Hon. Ray Lawson. *Oct. 11-13*, Prime Minister Walter Nash of New Zealand in Ottawa to confer with Prime Minister Diefenbaker. *Oct. 16*, Mrs. Golda Meir, Israeli Foreign Minister, in Ottawa to confer with Canada's Prime Minister and Minister of External Affairs. *Oct. 22*, Miss Blanche Margaret Meagher appointed Ambassador to Israel, the first Canadian woman in an ambassadorial post. *Oct. 23*, Seventy-four lives lost in a coal mine explosion at Springhill, N.S.; 81 men were rescued the first day, 12 on Oct. 30 and seven on Nov. 1. *Oct. 25*, An explosion, attributed to gas leakage, caused extensive damage in downtown Ottawa. *Oct. 28-31*, Prince Philip visited Ottawa to attend the Conference of the English-Speaking Union of which he is President. *Oct. 28 - Dec. 19*, The Prime Minister, accompanied by Mrs. Diefenbaker, toured European and Commonwealth countries. *Dec. 31*, Trade Union Local 2-254 of The International Woodworkers of America struck against its employer, the Anglo-Newfoundland Development Company, following the latter's rejection of the recommended wage increase by a Conciliation Board under the Newfoundland Labour Relations Act. When violence accompanied the strike, the Newfoundland Government with the unanimous support of the Assembly enacted the Trade Union (Emergency Provisions) Act of 1959, decertifying the two locals (2-254 and 2-255) of the IWA, and announced the organization of a rival union.

1959. *Jan. 1*, Federal-Provincial Hospital Plan went into effect in Ontario and Nova Scotia. *Feb. 20*, Production of the *CF-105 Arrow* discontinued. *Feb. 23*, Celebration of the 50th anniversary of flight in Canada at Bras d'Or Lake, N.S., scene of the first "Silver Dart" flight. *Mar. 17*, Death of Dr. Sidney Earle Smith, Minister of the Department of External Affairs. *Mar. 18*, Prime Minister Macmillan of the United Kingdom arrived in Ottawa for discussions on the situation in Germany, following talks in Russia and France and en route to Washington. *Apr. 10*, Canada's first privately owned and operated nuclear research reactor officially opened at McMaster University. *Apr. 26*, The St. Lawrence Seaway opened to navigation. *Apr. 26*, Prime Minister Fidel Castro of Cuba visited Montreal. *May 20*, Prime Minister Robert Menzies of Australia visited Ottawa. *June 18*, Her Majesty Queen Elizabeth and Prince Philip arrived at Torbay, Nfld., to begin a 45-day coast-to-coast tour of Canada. *June 20*, Thirty-five fishermen lost their lives in a violent storm in Northumberland Strait. *June 26*, The St. Lawrence Seaway officially opened by Her Majesty Queen Elizabeth and President Eisenhower of the United States in a historic ceremony at St. Lambert, Que. *June 30*, Seventeenth season of Canadian Shakespearean Festival opened at Stratford, Ont. *July 1*, Federal-Provincial Hospital Plan went into effect in New Brunswick. *July 2*, Japan

and Canada signed pact pledging co-operation in the peaceful uses of atomic energy. *July 9*, Canadian Brotherhood of Railway, Transport and General Workers was declared by the Canadian Labour Relations Board the bargaining agent of a system-wide unit of operating and maintenance employees of the St. Lawrence Seaway Authority. *July 15-29*, A Canadian delegation, headed by the Hon. George Drew, attended the Commonwealth Education Conference in Oxford, England, implementing the program proposed by Canada at the Commonwealth Economic Conference held at Montreal in September 1958. *July 17*, The Canadian Government announced the creation of an Emergency Measures Organization to function in the event of a sudden nuclear war. *July 18*, The Canadian Government announced the creation of a five-man National Energy Board which will have wide powers over the oil and natural gas industries and international electric power connections. *July 22*, Official opening of the Queen Elizabeth Power Generating Station (Saskatchewan Power Corporation) at Saskatoon by Her Majesty Queen Elizabeth. *Aug. 1*,

The Federal Cabinet met in Halifax, N.S., to bid farewell to Her Majesty Queen Elizabeth and Prince Philip who left by air for London, England. *Aug. 6*, Watson Seller, Auditor-General of Canada since 1940, retired. *Aug. 17*, Northern Affairs Minister Alvin Hamilton announced the discovery of oil at Eagle Plain, Yukon Territory—the first such discovery in the Yukon. *Sept. 7*, Death of Maurice Duplessis, Premier of Quebec Province for the past 18 years, at Schefferville, Que. *Sept. 9*, Announcement that Canada's first large nuclear power station will be built on the shores of Lake Huron, nine miles north of Kincardine at an estimated cost of \$60,000,000. *Sept. 10*, The Hon. Paul Sauvé chosen to succeed the late Maurice Duplessis as Premier of the Province of Quebec. *Sept. 13*, Two-hundredth anniversary of the battle of the Plains of Abraham. *Sept. 15*, Major-General George P. Vanier, D.S.O., M.C., C.D., appointed Governor General of Canada to succeed the Rt. Hon. Vincent Massey; investiture took place in the Senate. *Oct. 1*, Federal-Provincial Hospital Plan went into effect in Prince Edward Island.

PART VI.—STATISTICAL SUMMARY OF THE PROGRESS OF CANADA 1871-1958

Newfoundland entered Confederation in 1949 and figures for that province are included with Canadian statistics as they have become available. Under each item in the following Summary, the inclusion of Newfoundland data for the first time is indicated by a black dot (•). If no dot is shown on any of the years from 1951-58 for a particular item, Newfoundland is excluded throughout. In some instances the symbol does not apply. Revisions of figures published in previous editions of the Year Book are not indicated in this Summary.

STATISTICAL SUMMARY OF THE PROGRESS OF CANADA

NOTE.—The interpretation of the symbols used in the table will be found facing p. 1 of this volume.
